Abstract: As
society enters
the 21st
century, there is
a growing

awareness of the always been, and
burdens being placed on the
planet, as its ability to keep
up with the demands of
modern society are strained.
One of the major contributors to
this burden happens to be a
main resource required for
sustained development.
Energy has

will always be a necessary
resource for existence. Since
the industrial revolution, fossil
fuels such as coal and oil have
been the main-stay fuel to
accommodate society's
appetite. As the demand for this
resource increases, the
climatic and

socio-economic costs of this fuel become more acute, and it is well documented that the supply of this fuel is not endless. One of the major consumers of this fuel, as a society, is the transportation sector. The processes in place which take it from the ground, to its combustion as a fuel, are some of the main culprits which adversely affect the planet. This thesis explores the issues associated with the introduction of another energy resource

Hydrogen as a replacement fuel for the transportation industry. It is argued that for the transportation sector, Hydrogen offers the most promising alternative as a fuel. Making Hydrogen readily available and affordable through the retail infrastructure is of paramount importance, if its widespread use is to be achieved. The logistics of this are explored, and it is believed that the introduction of

small Hydrogen fuelers at existing retail outlets, is the preferred method to instantiate the transition in the short to medium term. Those fueling stations can utilize grid electricity to produce Hydrogen by the means of water electrolysis, or take advantage of the existing Natural Gas distribution infrastructure to produce Hydrogen via steam reformation. This thesis examines the Well-to-Wheels impacts and

economic feasibility of those options and compares them to existing vehicle and fuel technologies. The state of California was chosen as a target market due to its high automobile density, the resulting pollution issues, and its clear mandate on promoting alternative energy sources. Consumer Reports New Car Buying Guide

2002 Plunkett Research, Ltd. Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of

Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as

an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

In this marvelously original book, three-time Pulitzer Prize finalist Leslie Savan offers fascinating insights into why we're all talking the talk—Duh; Bring it on!; Bling; Whatever!—and what this reveals

about America today. Savan traces the paths that phrases like these travel from obscure slang to pop stardom, selling everything from cars (ads for VWs, Mitsubishi's, and Mercurys all pitch them as “no-brainer”s) to wars (finding WMD in Iraq was to be a “slam dunk”). Real people create these catchy phrases, but once media, politics, and businesses broadcast them, they burst out of our mouths as celebrity words, newly glamorous and powerful. Witty, fun, and full of thought-

provoking stories about the origins of popular expressions, Slam Dunks and No-Brainers is for everyone who loves the mysteries of language.
