Beyond Language Learning Instruction: Transformative Supports for Emergent Bilinguals and Educators Wiley-VCH

He likes his vodka martinis shaken, not stirred. He drives one of the most recognizable cars in film history, and his Walther PPK has become legendary too. Very few have ever looked better in a tuxedo. His name is Bond ... James Bond. He's chased villains -- and women -- on screen for decades. His fictional world and movie run have been threatened, but he is never defeated ... because His World Never Dies. In his book debut, Dave Holcomb takes a fresh look at how the 007 film series has persevered through multiple generations. He follows Bond from his birth on screen in 1962 through the early stages of No Time to Die, detailing how the series has evolved its portrayal of masculinity, femininity, race, and humor over the course of its history. Through the use of nostalgia, timeless musical themes and fan theories, Holcomb explains how 007 remains contemporary, relevant, and most importantly, popular, through the first two decades of the 21st century.

'I beg as soon as you get Fielding's Joseph Andrews, I fear in Ridicule of your Pamela and of Virtue in the Notion of Don Quixote's Manner, you would send it to me by the very first Coach.' (George Cheyne in a letter to Samuel Richardson, February 1742) Both Joseph Andrews (1742) and Shamela (1741) were prompted by the success of Richardson's Pamela (1740), of which Shamela is a splendidly bawdy parody. But in Shamela Fielding also demonstrates his concern for the corruption of contemporary society, politics, religion, morality, and taste. The same themes - together with a presentation of love as charity, as friendship, and in its sexual taste - are present in Joseph Andrews, Fielding's first novel. It is a work of considerable literary sophistication and satirical verve, but its appeal lies also in its spirit of comic affirmation, epitomized in the celebrated character of Parson Adams. This revised and expanded edition follows the text of Joseph Andrews established by Martin C. Battestin for the definitive Wesleyan Edition of Fielding's works. The text of Shamela is based on the first edition, and two substantial appendices reprint the preliminary matter from Conyers Middleton's Life of Cicero and the second edition of Richardson's Pamela (both closely parodied in Shamela). A new introduction by Thomas Keymer situates Fielding's works in their critical and historical contexts. ABOUT THE SERIES: For over 100 years Oxford World's Classics has made available the widest range of literature from around the globe. Each affordable volume reflects Oxford's commitment to scholarship, providing the most accurate text plus a wealth of other valuable features, including expert introductions by leading authorities, helpful notes to clarify the text, up-to-date bibliographies for further study, and much more.

Talks to Young People on the Book of Job Penguin

An indolent college student creates a chaotic fictional world in this classic of Irish literature: "A marvel of imagination, language, and humor" (New Republic). In this comic masterpiece, our unnamed narrator—a student at University College, Dublin, who spends more time drinking and working on his novel than attending classes—creates a character, a pub owner named Trellis, who himself is devoted mainly to writing and sleeping. Soon Trellis is collaborating with an author of cowboy romances, and from there unspools a brilliantly unpredictable adventure that James Joyce himself called "a really funny book." "'Tis the odd joke of modern Irish literature—of the three novelists in its holy trinity, James Joyce, Samuel Beckett and Flann O'Brien, the easiest and most accessible of the lot is O'Brien. . . . Flann O'Brien was too much his own man, Ireland's man, to speak in any but his own tongue." —The Washington Post "As with Scott Fitzgerald, there is a brilliant ease in [O'Brien's] prose, a poignant grace glimmering off every page." —John Updike "One of the best books of our century." —Graham Greene

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

In the 21st century, digital tools enable information to be generated faster and in greater profusion than ever before, to the point where its extent and value are literally beyond imagining. Such quantities can only be meaningfully addressed using more digital tools, and thus our relationship to information is fundamentally changed. This situation presents a particular challenge to processes of learning and teaching, and demands a response from both information professionals and educators. Enabling education in a digital environment means not only changing the form in which learning opportunities are offered, but also enabling students to survive and prosper in digitally based learning environments. This collection brings together a global community of educators, educational researchers, librarians and IT strategists, to consider how learners need to be equipped in an educational environment that is increasingly suffused with digital technology. Traditional notions of literacy need to be challenged, and new literacies, including information literacy and IT literacy, need to be considered as foundation elements for digitally involved learners. Leading international experts from the USA, Canada, Australia, New Zealand, South Africa, Mexico and throughout Europe contribute to the debate, and Hannelore Rader, Librarian and Dean of the University Libraries, University of Louisville, Kentucky, provides the foreword. The book is in two parts: In Part 1, Literacies in the Digital Age, the contributors analyse how digital technologies have enabled transformative change in the ways in which learning can be constructed, and discuss the nature of the new literacies that have emerged in this new virtual and e-learning environment. In Part 2, Enabling and Supporting Digital Literacies, the contributors go on to consider the ways in which digital literacies can be made available to learners, and how these literacies are being relocated in a more student-centred environment within the broader perspective of learning. Readership: This book takes the issues raised in the successful Information and IT Literacy, also co-edited by Allan Martin, into a broader context. It is essential reading for all information professionals and educators involved in developing strategies and practices for learning in a digital age.
