Blended learning continues to emerge as a more proactive and high quality method of teaching and learning. Yet as the academic

landscape shifts towards technology-based efforts, the lack of economic support in developing countries has hindered its educational growth. Advancing Technology and Educational Development through Blended Learning in Emerging Economies provides an insight on blended learning approaches and its importance in the educational development of emerging economies. This book is a vital resource for researchers, academics, professionals, and students involved in the management and organizational development of technology

use in educational settings.

As a result of changes in technology and the economy, every successful photography career today is unique, and each image-maker needs to

build a career that matches his or her talents to one or more markets. This indispensable manual from the American Society of Media Photographers sets the stage for understanding where the industry is now and where it is headed while offering step-by-step instructions for building a career tailored to one's own talents, interests, and business style in today's market. An overview of developments in the industry covers the new visual needs created by the economy, the changing definition of what it means to be a photographer, the shifting distribution of clients, the role of technology, and the role of copyright, licensing, compensation, and contracts. Photographers learn how to navigate this changing landscape in a second section that guides them through a

strategic analysis of their strengths and weaknesses and provides expert advice on building a business plan, marketing, and selling. Also included are concise business biographies of fifty visual artists who have successfully taken on the new markets in photography, to give readers an idea of the many directions a career today can take.

Inequity is the central challenge facing basic education in Ghana and undercuts the potential contribution of basic education to Ghana's national development goals. Persistent disparities in education service delivery and inequitable allocation of resources in Ghana lead to highly inequitable educational outcomes.

These inequities negatively affect system quality, efficiency and accountability and ultimately undermine broader national development. Wide-spread inequity in education service delivery significantly depresses system learning outcomes. This report describes a "missing middle" in terms of learning outcomes: While a small number of children perform well, the majority of pupils (more than 60%) pass through primary school without becoming proficient in numeracy and literacy. Specifically, children from Ghana's northern regions and deprived districts, poor and rural households and ethnic and linguistic minorities – students who require the most support to meet learning outcomes – receive, on average, disproportionately fewer resources from the government than their peers. Systemic inequities create this missing middle and drag down system performance. Following a decade of rapid change, as of 2013, more children are attending basic and senior high schools than at any time in the history of Ghana. In the past decade, Ghana has realized great

growth, progress and change. Population growth, urbanization and significant GDP growth have changed the economic, political and social landscape of Ghana. In the past decade, incidence of extreme poverty has been cut in half. Introduction of Free, Compulsory, Universal Basic Education (FCUBE) and kindergarten has supported a near doubling of basic education enrollment in the past 15 years. Delivering basic education and ensuring equity has become more challenging. Compared to a decade ago, more stakeholders are involved in allocating and managing core education inputs and accountability systems remain unclear and weak. Addressing the deeply embedded inequities (e.g. allocation of trained teachers, support to deprived districts and populations) is further complicated by a complex and fragmented policy, management and financing environment. The persistence of inequity reflects the persistence of conflicting sector interests and poses genuine policy dilemmas. However, recent experience shows that accelerating progress toward equity and quality basic

education for all is possible. Several recent initiatives in Ghana point to the possibility of improving equitable resource allocation, strengthening social protection and providing additional support to improve learning outcomes. For example, children with below-average learning outcomes in poorly resourced environments are likely to show measurable gains when provided additional support (e.g. instructional support, learning resources, management support, demand-side incentives).

China & Asia (exclusive of Near East) World Bank Publications Bachelor Thesis from the year 2018 in the subject Pedagogy - School System, Educational and School Politics, grade: 5 (GHA-System), University of Education (Distance Learning), course: Post Graduate Diploma in Education, language: English, abstract: Students' academic performance is a key feature in education. This study was therefore conducted primarily to assess the factors contributing to improvement in

academic performance of Junior High Students (JHS) in a Basic School which is in the Gomo-East District in the Central Region of Ghana. The mixed and descriptive research design was used and a sample size of 87 respondents (79 students and 8 teachers) were selected through random sampling technique. The findings revealed that the average academic performance (47.0%) of the JHS students in the Basic School is weak and their performance in Mathematics (average score of 31.48%) and English Language (average score of 39.99%) is a fail. It was noticed that student factors that contribute to an improvement in academic performance include; regular studying, self-motivation, punctuality and regular class attendance, hard-work and interest in a subject. The teacher factors were completion of syllabus, use of TLM's, frequent feedback to students and given students special attention. Per the findings, parent

factors which was very key was parent showing concern in their children ' s academics and providing them their academic needs. School factors that were significant included availability of text books and TLM ' s. The study also found that parent level of education and gender has a positive relationship with academic performance but it ' s insignificant. However, age has a positive significant (5% significance level) relationship with academic performance. Based on findings, the study recommends that there should be strict monitoring on teachers to vary their teaching methods to suit their needs of the students and also to provide the students with constant feedback on their academic performance. Again, the students should be motivated and orientated to take ownership of their studies by having regular studies and attending school during school days.

WAEC in Review is a practical intervention strategy in transforming the weakening educational system of Liberia where academic excellence is unceasingly diminishing. LIPACE Pilot Study Guide is not only a landmark achievement in the educational history of Liberia but a remarkable stride towards the proper preparation of Liberian students for future diets of the WAEC exam. As a member of the National Committee of the West African Examinations Council and a Stakeholder in the Liberian Education System, I wish to recommend the use of this study guide to adequately prepare each and every Liberian student for future examinations thereby setting the stage for an easy transition to the emerging West African Senior Secondary Examinations (WASSCE). I am explicitly confident that you will definitely find your journey through this guide very rewarding as you prepare to sit the next WAEC Exam.—David S. Massaquoi, Sr., director of Education, The Salvation Army – Liberia Command Education Secretariat Our students sit the exam in constant fear of proctors and supervisors. They know nothing about the exam and its structure and this fear lead to them failing massively. We need to build the confidence level of our students and help them to study hard and understand the

roles of proctors and supervisors to stop the intimidation during the exam. Thanks to LIPACE and the “ Turning the Tide ” project, we have helped our students achieved an amazing achievement for the first time in the history of Gbarpolu County where all senior students successfully passed the exam.—Lartey Bemah, principal of Bopolu Public School (2012-2013), Gbarpolu County, Liberia Vocationalisation of Secondary Education Revisited Elsevier Health Sciences

The economic theories that dominated the field during the 20th century have failed us and empowered government to believe they can manipulate the business cycle. Every economic theory presented post-Marxism has assumed that the complexity of the business cycle can be reduced to a single cause and effect. To date, no attempt to manipulate the cycle has prevented a recession or financial crisis. We now face a truly monumental crisis. Central banks around the world are trapped. Their attempt to stimulate the economy through Quantitative Easing and rate manipulation has disastrously failed. The central banks have primarily

purchased government debt, effectively keeping governments on life support by allowing them to issue new debt at substantially lower rates. In addition to catastrophic Quantitative Easing policies, political fiscal spending on various programs and agencies has burdened governments with a debt that they can never repay. The future crisis is one created by government. This time, we are not likely to fix the problem without major political reform, which all governments will resist. These policies have led many to assume that government can freely create money without inflation. After creating trillions of dollars to buy government debt with no appreciable inflation, many conclude that everything has changed. They are calling this the Modern Monetary Theory. If they are correct, then why bother to have taxes or borrow money continuously with no intention of paying off national debts? Governments, in modern theory, can simply create an endless supply of money to create a new modern version of Utopia. Can we throw away all economic history for an experiment

that could unravel civilization if the theory proves to be wrong? What are the risks? Can it really be that easy? Are there any examples from the past that we can look to for answers? Fundamentals of Pharmacognosy and Phytotherapy E-Book Simon and Schuster
This engaging open access book discusses how a values and valuing perspective can facilitate a more effective mathematics pedagogical experience, and allows readers to explore multiple applications of the values perspective across different education systems. It also clearly shows that teaching mathematics involves not only reasoning and feelings, but also students' interactions with their cultural setting and each other. The book brings together the work of world leaders and new thinkers in mathematics educational research to improve the learning and teaching of mathematics. Addressing themes such as discovering hidden cultural values, a multicultural society and methodological issues in the investigation of values in mathematics,

it stimulates readers to consider these topics in cross-cultural ways, and offers suggestions for research and classroom practice. It is a valuable resource for scholars of mathematics education, from early childhood through to higher education and an inspiring read for all mathematics teachers.

During the 2016 presidential election, America's election infrastructure was targeted by actors sponsored by the Russian government. Securing the Vote: Protecting American Democracy examines the challenges arising out of the 2016 federal election, assesses current technology and standards for voting, and recommends steps that the federal government, state and local governments, election administrators, and vendors of voting technology should take to

improve the security of election infrastructure. In doing so, the report provides a vision of voting that is more secure, accessible, reliable, and verifiable.

Pharmacognosy (the science of biogenic or nature-derived pharmaceuticals and poisons) has been an established basic pharmaceutical science taught in institutions of pharmacy education for over two centuries. Over the past 20 years though it has become increasingly important given the explosion of new drugs, phytomedicines (plant medicines), nutraceuticals and dietary supplements – all of which need to be fully understood, tested and regulated. From a review of the previous edition: ‘ Drawing on their wealth of experience and knowledge in this field, the authors, who are without doubt among the finest minds in pharmacognosy today, provide useful and fascinating insights into the history, botany, chemistry, phytotherapy and importance of medicinal plants in some of today ’ s healthcare systems. This is a landmark textbook, which carefully brings together relevant data from numerous sources and provides, in an authoritative and exhaustive manner, cutting-edge

information that is relevant to pharmacists, pharmacognocists, complementary practitioners, doctors and nurses alike. ’ The Pharmaceutical Journal
‘ This is an excellent text book which provides fascinating insights into the world of pharmacognosy and the authors masterfully integrated elements of orthodox pharmacognosy and phytotherapy. Both the science student and the non-scientific person interested in phytotherapy will greatly benefit from reading this publication. It is comprehensive, easy to follow and after having read this book, one is so much more aware of the uniqueness of phytomedicines. A must read for any healthcare practitioner. ’ Covers the history, biology and chemistry of plant-based medicines Covers pharmaceutical and nutraceuticals derived from plants Covers the role of medicinal plants in worldwide healthcare systems Examines the therapeutics and evidence of plant-based medicines by body system Sections on regulatory information expanded New evidence updates throughout New material covering non-medical supplements Therapeutics updated throughout Now on StudentConsult

Demographic transition constitutes one of the most fundamental modern historical

changes; people live much longer, have fewer children, and experience higher mobility. This book examines the basic mechanisms behind the modernisation of demographic behaviour. The author has marshalled an impressive array of statistical material relating to sixty-seven countries, half of them less developed countries. Most of the tables are time-series, covering many decades and sometimes go back to the nineteenth, and even eighteenth centuries. The whole sweep of western experience is dealt with here impartially. Though technically sophisticated, the book also covers issues of interpretation and analysis. The author puts forward a number of challenging propositions: mortality decrease is shown to necessarily precede fertility and decline, so-called exceptions being simply false exceptions. He shows how the decline of fertility is dependent on important and manifold social transformations. The strong connections between international migration and the course of demographic transition are demonstrated, as is the fact that less developed countries are following the same general patterns as MDCs. There is also discussion of why the theory of demographic transition must include the effect of population changes on the economic progress of society.

The book is a cutting-edge contribution to the debate which has occurred for some time on the pros and cons of secondary education becoming more closely and explicitly related to preparing young people for the world of work. The book provides concrete examples of the vocationalisation of secondary education, with particular reference to the situation in Africa. The target audience for the book includes policy-makers, practitioners, administrators, education planners, researchers, teachers and teacher educators with a concern about the relationship between secondary education and education for the world of work (with particular reference to technical and vocational education and training - TVET.) The book appears in the Springer book series on ' Technical and Vocational Education and Training: Issues, Concerns and Prospects ' and compliments the ' International Handbook of Technical and Vocational Education and Training ' and other publications in the ' International Library of TVET ' all of which are publications of the ' UNESCO-UNEVOC International Centre for TVET ' in Bonn, Germany

There is great consistency throughout these articles, research projects, management schemes, and standards, in and out of librarianship. Does the repetition suggest that the lessons have not yet been learned? Rather, it may be that there is no new silver bullet or shortcut for academic libraries. Experience reveals that one may have the formal process without getting good results and vice versa; the determining factor is whether the library staff, managers, and stakeholders define certain fundamental assumptions about the nature of the enterprise. All the above have in common the following underlying components: The careful definition of goals or of some kind of criteria against which success can be assessed A focus on meeting the needs of the users, as defined by the library and the institution Leadership: a commitment from the top, conscious efforts at ensuring

communication, the provision of training and resources for the process of evaluation, the active support of a process to promote shared values The involvement of all levels of staff in goal setting, evaluation, and the improvement of processes and services Integrating a process of evaluation that is continuous and adaptive, whether that process is based on the framework of TQM, strategic planning, or another model Essentials of Economics National Academies Press Praise for THE TRAVELS OF A T-SHIRT IN THE GLOBAL ECONOMY "Engrossing . . .  Antimicrobial Resistance in Developing

Countries IGI Global
 The adulteration and fraudulent manufacture of medicines is an old problem, vastly aggravated by modern manufacturing and trade. In the last decade, impotent antimicrobial drugs have compromised the treatment of many deadly diseases in poor countries. More recently, negligent production at a Massachusetts compounding pharmacy sickened hundreds of Americans. While the national drugs regulatory authority (hereafter, the regulatory authority) is responsible for the safety of a country's drug supply, no single country can entirely guarantee this today. The once common use of the term counterfeit to describe any drug that is not what it claims to be is at the heart of the argument. In a narrow, legal sense a counterfeit drug is one that infringes on a registered trademark. The lay meaning is much broader, including any drug made with intentional deceit. Some generic drug companies and civil society groups object to calling bad medicines counterfeit, seeing it as the deliberate conflation of public health and intellectual property concerns. *Countering the Problem of Falsified and Substandard Drugs* accepts the narrow meaning of counterfeit, and, because the nuances of trademark infringement must be dealt

with by courts, case by case, the report does not discuss the problem of counterfeit medicines.

 This book addresses the need for tests that can diagnose the strengths and weaknesses in learners' developing foreign language proficiency. It presents the rationale for, and research surrounding, the development of DIALANG, a suite of internet-delivered diagnostic foreign language tests funded by the European Commission. The word 'diagnosis' is common in discussions in language education and applied linguistics, but very few truly diagnostic tests exist. However, the diagnosis of foreign language proficiency is central to helping learners make progress. This volume explores the nature of diagnostic testing, emphasizing the need for a better understanding of the nature of

appropriate diagnosis. The book starts with a debate about how diagnostic testing might most appropriately be developed. Charles Alderson argues that the field has neglected to construct diagnostic tests, partly because other forms of testing have dominated the field. Alderson examines how proficiency has been diagnosed in the key areas of language: reading, listening, writing, grammar and vocabulary. The value of self-assessment is discussed and exemplified as a key component in developing learners', and teachers', awareness of the complexity of language learning. The book ends with a consideration of and recommendations for future developments in the diagnosis of foreign language proficiency.

The seventeen equations that form the basis for life as we know it Most people are familiar with history's great equations: Newton's Law of Gravity, for instance, or Einstein's theory of relativity. But the way these mathematical breakthroughs have contributed to human progress is seldom appreciated. In *In Pursuit of the Unknown*, celebrated mathematician Ian Stewart untangles the roots of our most important mathematical statements to

show that equations have long been a driving force behind nearly every aspect of our lives. Using seventeen of our most crucial equations--including the Wave Equation that allowed engineers to measure a building's response to earthquakes, saving countless lives, and the Black-Scholes model, used by bankers to track the price of financial derivatives over time--Stewart illustrates that many of the advances we now take for granted were made possible by mathematical discoveries. An approachable, lively, and informative guide to the mathematical building blocks of modern life, *In Pursuit of the Unknown* is a penetrating exploration of how we have also used equations to make sense of, and in turn influence, our world.
