 As threats to the security of information pervade the fabric of everyday
 life, A Vulnerable System describes how, even as the demand for
 information security increases, the needs of society are not being met.
 The result is that the confidentiality of our personal data, the integrity of
 our elections, and the stability of foreign relations between countries are
 increasingly at risk. Andrew J. Stewart convincingly shows that
 emergency software patches and new security products cannot provide
 the solution to threats such as computer hacking, viruses, software
 vulnerabilities, and electronic spying. Profound underlying structural
 problems must first be understood, confronted, and then addressed. A
 Vulnerable System delivers a long view of the history of information
 security, beginning with the creation of the first digital computers during
 the Cold War. From the key institutions of the so-called military
 industrial complex in the 1950s to Silicon Valley start-ups in the 2020s,
 the relentless pursuit of new technologies has come at great cost. The
 absence of knowledge regarding the history of information security has
 caused the lessons of the past to be forsaken for the novelty of the
 present, and has led us to be collectively unable to meet the needs of the
 current day. From the very beginning of the information age, claims of
 secure systems have been crushed by practical reality. The myriad risks
 to technology, Stewart reveals, cannot be addressed without first
 understanding how we arrived at this moment. A Vulnerable System is
 an enlightening and sobering history of a topic that affects crucial
 aspects of our lives.

This book discusses how scientific and other types of cognition make use of
 models, abduction, and explanatory reasoning in order to produce important
 or creative changes in theories and concepts. It includes revised contributions
 presented during the international conference on Model-Based Reasoning
 (MBR ' 015), held on June 25-27 in Sestri Levante, Italy. The book is divided
 into three main parts, the first of which focuses on models, reasoning and
 representation. It highlights key theoretical concepts from an applied
 perspective, addressing issues concerning information visualization,
 experimental methods and design. The second part goes a step further,
 examining abduction, problem solving and reasoning. The respective

contributions analyze different types of reasoning, discussing various concepts of inference and creativity and their relationship with experimental data. In turn, the third part reports on a number of historical, epistemological and technological issues. By analyzing possible contradictions in modern research and describing representative case studies in experimental research, this part aims at fostering new discussions and stimulating new ideas. All in all, the book provides researchers and graduate students in the field of applied philosophy, epistemology, cognitive science and artificial intelligence alike with an authoritative snapshot of current theories and applications of model-based reasoning.
