Hear from some of the GradePod students who have used the guide:

"Thanks to you and this fantastic guide, I was able to achieve a 7 in my IB exams (and being a May 2020 student...) the majority of my 7 was determined by my IA. Getting the 7 allowed me to fulfil one of my university requirements, so I am very grateful. My total scaled moderated mark was 70%. P.S. I have advertised your course to all the first years and coming second years because it is worth it!" - Irene Mahanyu, IB Physics Student, East Africa

"Being a May 2020 student... I was really nervous getting my grades this year BUT I have been awarded a 7 in IB Physics HL. I have a feeling this year's grades have been influenced a lot by the IA so I just wanted to say thank you. I really appreciated the Step-by-Step Guide solving doubts and perfecting my IA, which got top marks! THANK YOU!" - Elena Perez, IB Physics Student, Spain

"I would like to thank you soooooo much for the Step-by-Step Guide to Writing the PERFECT Physics IA, it's got me a 7 in my internal assessment, which is 20% of my predicted grade for Physics! I really, really appreciate all the work you put into creating something so helpful" - Tasnim Dico, IB Physics Student, UAE

This report considers the biological and behavioral mechanisms that may underlie the

pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Americans have long recognized that investments in public education contribute to the common good, enhancing national prosperity and supporting stable families, neighborhoods, and communities. Education is even more critical today, in the face of economic, environmental, and social challenges. Today's children can meet future challenges if their schooling and informal learning activities prepare them for adult roles as citizens, employees, managers, parents, volunteers, and entrepreneurs. To achieve their full potential as adults, young people need to develop a range of skills and knowledge that facilitate mastery and application of English, mathematics, and other school subjects. At the same time, business and political leaders are increasingly asking schools to develop skills such as problem solving, critical thinking, communication, collaboration, and self-management - often referred to as "21st century skills."

Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century describes this important set of key skills that increase deeper learning, college and career readiness, student-centered learning, and higher order thinking. These labels include both cognitive and non-cognitive skills- such as critical thinking, problem solving, collaboration, effective communication, motivation, persistence, and learning to learn. 21st century skills also include creativity, innovation, and ethics that are important to later success and may be developed in formal or informal learning environments. This report also describes how these skills relate to each other and to more traditional academic skills and content in the key disciplines of reading, mathematics, and science. *Education for Life and Work: Developing Transferable Knowledge and Skills in the 21st Century* summarizes the findings of the research that investigates the importance of such skills to success in education, work, and other areas of adult responsibility and that demonstrates the importance of developing these skills in K-16 education. In this report, features related to learning these skills are identified, which include teacher professional development, curriculum, assessment, after-school and out-of-school programs, and informal learning centers such as exhibits and museums.

The bloodshed and hatred of frontier conflict at once made go-betweens obsolete and taught the harsh lesson of the woods: the final incompatibility of colonial and native dreams about the continent they shared. Long erased from history, the go-betweens of early America are recovered here in vivid detail.

This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum.
