Public Economics in an Age of Austerity John Catt Educational Ltd

The 2013 IB HL Economics syllabus change introduced Paper 3, an essentially calculations-based assessment. This development challenged teachers and students alike, as few Paper 3 practice resources have been available. This is furthermore an area of the syllabus where, as in Mathematics, practice is fundamentally important in developing the skills and confidence for needed for success. Paul Hoang's latest publication therefore represents an invaluable resource in helping students to prepare for the examination challenges they face. For many candidates the mix of words, theory

and numbers in Paper 3 questions can be overwhelming, if they have not developed easy familiarity throughout their course. With clear layout and content that beautifully mirrors IB examination questions, this resource is the one we have all been waiting for. I absolutely recommend it as a 'must have' for all those who are preparing for the HL Economics examination. IT is a core resource invaluable to students and teachers alike. Economic Development of Emerging East Asia presents economic studies of Taiwan and South Korea, compares them chiefly with Japan and the United States and finds that these East Asian countries are still in the process of emerging in the world economy. A timely quantitative and econometric analysis of the regional economies of emerging East Asia, the volume examines development indicators, effects of the 1997 Asian financial crisis, productivity growth, catching up and convergence of long run real GDP per capita growth, the time required for a country to catch up, colonialism and economic development in Taiwan and India. Arranged in increasing complexity of economic analyses, the chapters in this book provide a comprehensive understanding of emerging East Asian economies. In addition to serving as a handy reference for regional economists, policy analysts and researchers, Economic Development of Emerging East Asia can also be used as a textbook on economics and business.

Governments all round the world are facing problems with their public finances. At a time of austerity, how much should spending be cut and how much should taxes be raised? Does the national debt represent a burden for future generations? Should taxes on the rich be raised? This book examines how the tools of public economics can be applied to answer such key questions and to suggest alternatives to the austerity policies currently being pursued. The fiscal problems faced are not simply the result of the post-2008 economic crisis but reflect a deep-seated fault line in modern economies. There has to be fiscal consolidation to provide for an ageing population, increased investment in education, and climate change. The book describes how public economics can help us think about alternative ways of meeting this challenge. It casts doubt on conventionally held views, such as those concerned with top tax rates, the undesirability of taxing capital income, the targeting of child benefits, and the merging of income tax and social security contributions. The final part goes beyond national boundaries and considers global public economics, focusing on the pressing problem of financing development. The conclusion of the book is that there are significant choices to be made. Not all austerity packages are the same: there are alternatives. It would be possible to raise taxes more and to cut spending less. It

is important to consider the full range of possible policies. In considering these alternatives, modern public economics provides a useful framework, but it has major limitations. Economists are too often prisoners within the theoretical walls they have erected and fail to see that important considerations are missing. Economists have paid too little attention to the ethical basis underlying their policy recommendations.
