This practical resource introduces readers to the design of field programmable gate array systems (FPGAs). Techniques and principles that can be applied by the engineer to understand challenges before starting a project are presented. The book provides a framework from which to work and approach development of embedded systems that will give readers a better understanding of the issues at hand and can develop

solution which presents lower technical and programmatic risk and a faster time to market. Programmatic and system considerations are introduced, providing an overview of the engineering life cycle when developing an electronic solution from concept to completion. Hardware design architecture is discussed to help develop an architecture to meet the requirements placed upon it, and the trade-offs required to achieve the budget. The FPGA development lifecycle and the inputs and outputs from each

stage, including design, test benches, synthesis, mapping, place and route and power estimation, are also presented. Finally, the importance of reliability, why it needs to be considered, the current standards that exist, and the impact of not considering this is explained. Written by experts in the field, this is the first book by "engineers in the trenches" that presents FPGA design on a practical level.

truly a wonderous marriage. The author felt that over fifty years ago, as he walked up the steps of the Los Angeles Police Academy, when he first entered into a career in law enforcement. Jim, as he prefers to be called, enjoyed this new world and endeavored to learn everything he could about it. During his career, Jim attended 88 investigative training programs and completed 38 law enforcement related correspondence courses. In his spare time, he managed to obtain his Associates in Arts Degree in Police Science and his Bachelors of Science Degree in Criminal Justice Administration. Today, he is a District Court Certified Forensic and Fingerprint Expert; and has held a California State Private Investigators License for over 40 years. Jim has taught

Crime Scene Technology to law enforcement officers throughout the United States. In his giveback to those who want to enter into the field of law enforcement, or private investigation, he wrote his Manual. Come with him into this new world, and give back to your community through knowledge and practice of what you learn within the covers of this book.
