International cooperation on the health of seafarers began many years ago.

As early as 1921, an international convention regarding this matter was

presented to govern ments of maritime countries for ratification. The First World Health Assembly, in 1948, recommended that WHO should establish, with the International Labour Of fice, a Joint Committee on the hygiene of seafarers. The first session of this Com mittee, held in 1949, defined the problems affecting the health of seamen and made a number of recommendations. In the opinion of this Joint

Committee, the health of seamen called for interna tional attention for a nu mb er of reasons. By the nature of his work, the seafarer is obliged to travel from country to country and is exposed to great variations of cli mate and also to any disease that may be prevalent in the port of call. He may there fore become a carrier of disease, so that the protection of his health is of importance not only to himself and the other members of the crew but

---

also to the populations of other countries he visits. Yet, on account of the nature of his employment, it is difficult to provide the seafarer with the same standard of health care that is generally available to other sections of the population.

This book teaches the reader to build rockets--powered by compressed air, water, and solid propellant--with the maximum possible fun, safety, and educational experience.

Make: Rockets is for all the science geeks who look at the moon and try to figure out where Neil Armstrong walked, watch in awe as rockets lift off, and want to fly their own model rockets. Starting with the basics of rocket propulsion, readers will start out making rockets made from stuff lying around the house, and then move on up to air-, water-, and solid propellant-powered rockets. Most of the rockets in the book can be built from parts in the Estes Designer Special kit.

This book uses MATLAB as a computing tool to explore traditional DSP topics and solve problems. This greatly

expands the range and complexity of problems that students can effectively study in signal processing courses. A large number of worked examples, computer simulations and applications are provided, along with theoretical aspects that are essential in order to gain a good understanding of the main topics. Practicing engineers may also find it useful as an introductory text on the subject.

**Solar & 12 Volt Power for Beginners** McGraw Hill Professional

This fascinating book provides a stimulating

introduction to analog electronics by analysing the design and construction of a radio transceiver. Essential theoretical background is given along with carefully designed laboratory and homework exercises. The author begins with a thorough description of basic electronic components and simple circuits and goes on to describe the key elements of radio electronics, including filters, amplifiers, oscillators, mixers, and antennas. Laboratory exercises lead the reader through the design,

construction, and testing of a popular radio transceiver (the NorCal 40A). A diskette containing the widely known circuit simulation software, Puff, is included in the book. This was the first book to deal with elementary electronics in the context of radio. It can be used as a textbook for introductory analog electronics courses, for more advanced undergraduate classes on radio-frequency electronics, and will also be of great interest to electronics hobbyists and radio enthusiasts.

*Make: Rockets* Springer  
Since its first publication in 1972, more than 30,000 blue-water sailors have looked to this book when injury or illness struck at sea. Virtually every accident or ailment that might occur when professional medical care is unavailable is squarely faced and dealt with, using layman's language and step-by-step instructions that calmly take the reader from diagnosis through treatment to follow-up care. The fifth edition brings this standard work up-to-date with current medical

practice. While maintaining its ease of use for quick, easy reference in case of a medical emergency at sea, diagrams inside the front and back covers point the reader to the appropriate section of the book. Each section starts with a short account of a possible accident or sickness that might occur on a voyage, and then lists the steps to be taken by the caregiver. Photographs and diagrams accompany many of the procedures. Separate chapters are devoted to preparing a crew and the

boat's medical chest for long cruises, including lists of drugs for which prescriptions are needed. A number of chapters deal with the unique needs of children. *The Electronics of Radio* Maker Media, Inc.
