Minutes and Votes and Proceedings of the Parliament, with Papers Presented to Both Houses Pearson Education The design and analysis of efficient data structures has long been recognized as a key component of the Computer Science curriculum. Goodrich, Tomassia and Goldwasser's approach to this classic topic is based on the object-oriented paradigm as the framework of choice for the design of data structures. For each ADT presented in the text, the authors provide an associated Java interface. Concrete data structures realizing the ADTs are provided as Java classes implementing the interfaces. The Java code implementing fundamental data structures in this book is organized in a single Java package, net.datastructures. This package forms a coherent library of data structures and algorithms in Java specifically designed for educational purposes in a way that is complimentary with the Java Collections Framework.

Debord describes and critiques the way we live. The power in these ideas lies in their ability to question, identify, and name the common assumptions of the present. Developing the concept of The Spectacle, he describes the "gaze" of contemporary society. From its publication just before, and ultimately influencing the May 1968 revolt in Paris and Occupy Wall Street, this book continues to transform a wide range of progressive philosophical and political movements, most notably anti-capitalism, postmodernism, marxism, and anarchism. This new translation brings a concrete edge to the text, elaborating upon the original, and adding annotations. Bringing fifty years of prominent radical thinking back to the text, from Baudrillard to Odell to Zuboff—it's clear that Debords' book is more relevant in the era of social media, the attention economy, and the emergence of Surveillance Capitalism than ever before.
