Teachers make a difference. The success of any plan for improving educational outcomes depends on the teachers who carry it out and thus on the abilities of those attracted to the field and their preparation. Yet there are many questions about how teachers are being prepared and how they ought to be prepared. Yet, teacher preparation is often treated as an afterthought in discussions of improving the public education system. *Preparing Teachers* addresses the issue of teacher preparation

with specific attention to reading, mathematics, and science. The book evaluates the characteristics of the candidates who enter teacher preparation programs, the sorts of instruction and experiences teacher candidates receive in preparation programs, and the extent that the required instruction and experiences are consistent with converging scientific evidence. *Preparing Teachers* also identifies a need for a data collection model to provide valid and reliable information about the content knowledge, pedagogical competence, and effectiveness of graduates from the various kinds of teacher preparation programs. Federal and state policy makers need reliable, outcomes-based information to make sound decisions, and teacher educators need to know how best to contribute to the development of effective teachers. Clearer understanding of the content and character of effective teacher preparation is critical to improving it and to ensuring that the same critiques and questions are not being repeated 10 years from now.

Tropical emerging diseases pose a significant risk for the circulation of old and new pathogens in areas previously unknown, also implying the possibility of new morbidities and mortalities and new consequences for naïve populations. Globalization, migration and travel are key factors for tropical diseases, and represent the need for integration of tropical medicine, travel medicine and epidemiology in the understanding of such

complex situations. Neglected tropical diseases such as leprosy or Chagas disease, arboviral diseases, HIV, Ebola, and arenaviral infections are just a few examples. This book tries to update significant epidemiological and clinical research in many aspects with a multinational perspective. Over 400 years ago, Swiss  
alchemist and physician  
Paracelsus (1493-1541) cited:  
"All substances are poisons;  
there is none that is not a  
poison. The right dose  
differentiates a poison from a  
remedy." This is often  
condensed to: "The dose makes  
the poison." So, why are we  
overtly anxious about  
intoxications? In fact, poisons

became a global problem with the industrial revolution. Pesticides, asbestos, occupational chemicals, air pollution, and heavy metal toxicity maintain high priority worldwide, especially in developing countries. Children between 0 and 5 years old are the most vulnerable to both acute and chronic poisonings, while older adults suffer from the chronic effects of chemicals. This book aims to raise awareness about the challenges of poisons, to help clinicians understand current issues in toxicology.

This resource examines professional development approaches from across the United States to help schools and allied arts groups integrate the arts into an already crowded K-12 curriculum. The authors document the purposes and structures of a broad spectrum of current efforts and programs. Several of these programs have been in place for decades, thus demonstrating their sustainability and effectiveness. Emphasizing the value of

collaboration among teachers, artists, educational leaders, and community partners, the book draws on the broad range of experiences of the authors, who came together as a working group of the Art Education Partnership. Readers will find strong, empirically tested models of arts integration to inform curriculum development and teacher professional learning. Book Features: the first critical reflection on arts-integration training programs and projects from across the United States; promising practices for pre- and inservice teacher professional development programs in arts integration; and a summary list of recommendations for actions based on the authors' collaborative experiences.

The WHO Regional Office for Europe commissioned this report to support the implementation of the health 2020 Framework. It builds on "Governance for Health in the 21st Century," a study conducted for the WHO Regional office for

Europe. This report provides policy-makers with examples from around the world of how whole-of-government and whole-of-society approaches have been implemented together with a set of tools to manage the complex policy process. These policy examples have been selected with a view to the priority areas set by the Health 2020 policy framework and with the following criteria in mind: they provide useful lessons, often illustrate best practices, cover a wide variety of different contexts and countries and, as far as possible, have been implemented and, ideally, evaluated. The report aims to contribute, in particular, to the Health 2020 strategic policy objective of "improving leadership

---

and participatory governance for health." It is conceived as a living document that will be continually enriched with new examples and analysis.
