Different engine designs/configurations develop different torque characteristics such as peak curve/flat curve. Most automotive engines produce useful torque output within a narrow band of the engine's entire speed range. In petrol engines, it characteristically starts at around 1000-1200 rpm and reaching a peak in the range of 2,500-4,000 rpm. .

Whereas in a diesel engine, it starts at ...

The ignition system is one of the most important systems used in the I.C engines. The spark-ignition engine requires some device to ignite the compressed air-fuel mixture. The ignition takes place inside the cylinder at the end of the compression stroke, the ignition system serves this purpose. It is a part of the electrical system which carries the electrical current to a current plug.

Ignition Flat Engine GraphThe yellow line starts to rise as the piston moves upward (all valves closed) starting compression. At the right moment, usually around 28° before Top Dead Center (TDC), the ignition system sends voltage to the spark plug. There is a lag of a few milliseconds from the time the current is sent and when the spark actually starts combustion.
