Students of today, especially at the school level, perceive science as a collection of facts to
be memorized, whereas, in reality, it is constantly changing as new information
accumulates and new techniques develop every day. The objective of teaching is not
restricted to imparting scientific information to students, but also to help them apply these

principles in their daily lives. This comprehensive book, written in an easy-to-understand
language, covers the entire syllabus of teaching of Biological Sciences in particular and
Science Teaching in general. In so doing, it takes into account the needs of teacher-trainees
and in-service teachers. Organized into 20 chapters, the book discusses in detail the many
facets and aspects of Biology/Science Teaching. The text introduces modern approaches to
teaching, with the aim of improving student learning throughout their course. It emphasizes
the need for pedagogical analysis vis-à-vis subject teaching, constructive approach,
laboratory work, Continuous and Comprehensive Evaluation (CCE). In addition, the text
highlights the difference between microteaching and simulated teaching. It also shows how
e-learning and co-curricular activities can be successfully integrated in biological sciences
teaching. NEW TO THIS EDITION Inclusion of one chapter on 'Concept Mapping in Biology
Teaching'. This chapter advocates the popularized constructivist approach of teaching-
learning process. Besides, some figures, tables and flow charts are also added to make the
book more useful to the readers. KEY FEATURES : • Analyses Constructivism versus
Behaviourism. • Includes self-explanatory model lesson plan. • Discusses Information and
Communication Technology (ICT) in the context of Biology/Science teaching-learning. •
Suggests how apparatus and devices can be secured and cultured, and used in classroom
demonstrations and student projects. Primarily intended as a text for students of B.Ed.
pursuing course on Teaching of Biological Sciences/Life Sciences, the book should prove
equally useful for B.Ed. students following courses on Teaching of Physical Sciences. In
addition, diploma students of Elementary Teacher Education (ETE) having a paper on
Teaching of EVS (General Science), and M.Ed. and M.A. (Education) students with an
optional/elective paper on Science Education would find the book extremely useful.

Global society in the 21st century is facing challenges of improving the
quality of air, water, soil and the environment and maintaining the ecological
balance. Environmental pollution, thus, has become a major global concern.
The modern growth of industrialization, urbanization, modern agricultural
development and energy generation has resulted in the indiscriminate

exploitation of natural resources for fulfilling human desires and needs, which
has contributed in disturbing the ecological balance on which the quality of
our environment depends. Human beings, in the truest sense, are the product
of their environment. The man-environment relationship indicates that
pollution and deterioration of the environment have a social origin. The
modern technological advancements in chemical processes/operations have
generated new products, resulting in new pollutants in such abundant levels
that they are above the self-cleaning capacity of the environment. One of the
major issues in recent times is the threat to human lives due to the
progressive deterioration of the environment from various sources. The
impact of the pollutants on the environment will be significant when the
accumulated pollutants load will exceed the carrying capacity of the
receiving environment. Sustainable development envisages the use of natural
resources, such as forests, land, water and fisheries, in a sustainable manner
without causing changes in our natural world. The Rio de Janeiro-Earth
Summit, held in Brazil in 1992, focused on sustainable development to
encourage respect and concern for the use of natural resources in a
sustainable manner for the protection of the environment. This book will be
beneficial as a source of educational material to post-graduate research
scholars, teachers and industrial personnel for maintaining the balance in the
use of natural sources for sustainable development.

Improved conditions of care for premature infants have led to markedly increased survival rates over the last few decades, particularly in very low and extremely low birth weight infants. Nutritional measures play a central role in the long-term outcome, health and quality of life of these premature infants. In this publication, leading experts from all 5 continents present the most recent evidence and critical analyses of nutrient requirements and the practice of nutritional care (with the focus on very low birth weight infants) to provide guidance for clinical application. After the introductory chapters, covering nutritional needs and research evidence in a more general manner, topics such as amino acids and proteins, lipids, microminerals and vitamins, parenteral and enteral nutrition as well as approaches to various disease conditions are addressed. Due to its focus on critical appraisals and recommendations, this book is of interest not only for the researcher who wants to keep up to date, but also for the clinician faced with premature infants in his practice.

Experiential learning is a powerful and proven approach to teaching and learning that is based on one incontrovertible reality: people learn best through experience. Now, in this extensively updated book, David A. Kolb offers a systematic and up-to-date statement of the theory of experiential learning and its modern applications to education, work, and adult development. Experiential Learning, Second Edition builds on the intellectual origins of experiential learning as defined by figures such as John Dewey, Kurt Lewin, Jean Piaget, and L.S. Vygotsky, while also reflecting three full decades of research and practice since the classic first edition. Kolb models the underlying structures of the learning process based on the latest insights in psychology, philosophy, and physiology. Building on his comprehensive structural model, he offers an exceptionally useful typology of individual learning styles and corresponding structures of knowledge in different academic disciplines and careers. Kolb also applies experiential learning to higher education and lifelong learning, especially with regard to adult education. This edition reviews recent applications and uses of experiential learning, updates Kolb's framework to address the current organizational and educational landscape, and features current examples of experiential learning both in the field and in the classroom. It will be an indispensable resource for everyone who wants to promote more effective learning: in higher education, training, organizational development, lifelong learning environments, and online.

Case Studies in Clinical Psychological Science B. F. Skinner Foundation
B. F. Skinner titled this book, Contingencies of Reinforcement, after the heart of his science of behavior. Contingencies relate classes of actions to postcedent events and to the contexts in which those action-postcedent relations occur. The basic processes seem straightforward, but many people do not know or understand the underlying theory. Skinner believed that 'a theory is essential to the scientific understanding of behavior as a subject matter'. This book presents some of Skinner's most sophisticated statements about theoretical issues. To his original articles, he added notes to clarify and expand subtle points. The book thus provides an overview of Skinner's thinking about theory and the philosophy underpinning the science he began.

TEACHING OF BIOLOGICAL SCIENCES (Intended for Teaching of Life Sciences, Physics, Chemistry and General Science) S. Chand Publishing

Now on Netflix as a 4-part documentary series! "Pollan keeps you turning the pages . . . clear-eyed and assured." —New York Times A #1 New York Times Bestseller, New York Times Book Review 10 Best Books of 2018, and New York Times Notable Book A brilliant and brave investigation into the medical and scientific revolution taking place around psychedelic drugs--and the spellbinding story of his own life-changing psychedelic experiences When Michael Pollan set out to research how LSD and psilocybin (the active ingredient in magic mushrooms) are being used to provide relief to people suffering from difficult-to-treat conditions such as depression, addiction and anxiety, he did not intend to write what is undoubtedly his most personal book. But upon discovering how these remarkable substances are improving the lives not only of the mentally ill but also of healthy people coming to grips with the challenges of everyday life, he decided to explore the landscape of the mind in the first person as well as the third. Thus began a singular adventure into various altered states of consciousness, along with a dive deep into both the latest brain science and the thriving underground community of psychedelic therapists. Pollan sifts the historical record to separate the truth about these mysterious drugs from the myths that have surrounded them since the 1960s, when a handful of psychedelic evangelists inadvertently catalyzed a powerful backlash against what was then a promising field of research. A unique and elegant blend of science, memoir, travel writing, history, and medicine, How to Change Your Mind is a triumph of participatory journalism. By turns dazzling and edifying, it is the gripping account of a journey to an exciting and unexpected new frontier in our understanding of the mind, the self, and our place in the world. The true subject of Pollan's "mental travelogue" is not just psychedelic drugs but also the eternal puzzle of human consciousness and how, in a world that offers us both suffering and joy, we can do our best to be fully present and find meaning in our lives.
