The Routledge Handbook of Transregional Studies brings together the various fields within which transregional phenomena are scientifically observed and analysed. This handbook presents the theoretical and methodological potential of such studies for the advancement of the conceptualization of global and area-bound developments. Following three decades of intense debate about globalization and transnationalism, it has

become clear that border-crossing connections and interactions between societies are highly important, yet not all extend beyond the borders of nation-states or are of truly world-wide reach. The product of extensive international and interdisciplinary cooperation, this handbook is divided into ten sections that introduce the wide variety of topics within transregional studies, including Colonialism and Post-Colonial Studies, Spatial Formats, International Organizations, Religions and Religious Movements, and Transregional Studies and Narratives of Globalization. Recognizing that transregional studies asks about the space-making and space-formatting character of connections as well as the empirical status of such connections under the global condition, the volume reaches beyond the typical

confines of area and regional studies to consider how areas are transcended and transformed more widely. Combining case studies with both theoretical and methodological considerations, The Routledge Handbook of Transregional Studies provides the first overview of the currently flourishing field of transregional studies and is the ideal volume for students and scholars of this diverse subject and its related fields.

This unique handbook brings together a team of leading scholars and practitioners in order to map, synthesize and assess key perspectives on cooperation and rivalry between regional and global organizations in world politics. For the

first time, a variety of inter-disciplinary theoretical and conceptual perspectives are combined in order to assess the nature, processes and outcomes of inter-organizational partnerships and rivalries across major policy areas, such as peace and security, human rights and democratisation as well as finance, development and climate change. This text provides scholars, students and policy-makers of International Relations with an exhaustive reference book for understanding the theoretical and empirical dimensions of an increasingly important topic in International Relations (IR), Global Governance and related disciplines.

What is logistics? What is distribution and supply? What is supply chain management? Which elements create distribution and supply space? Which aspects affect storage design? Which information technologies are suitable for distribution and supply systems? What costs affect distribution and supply systems? These are just some of the questions explored in this book. In addition to providing theoretical analysis of the problems of distribution and supply, it

practically demonstrates the many ways of using of heuristics to solve specific tasks. It brings together eight case studies to investigate facets such as designing distribution systems, location problem solving, distribution and collection of goods solutions, and inventory management solutions in particular companies. As such, it will appeal to students in the field of logistics, as well as logistics managers, designers and planners.

“ Masterful (and timely)...[A] marathon trek from Victorian propriety to social media exhibitionism...Utterly original. ” —Washington Post Every day, we make decisions about what to share and when, how much to expose and to whom. Securing the boundary between one ’ s private affairs and public identity has become an urgent task of modern life. How did privacy come to loom so large in public consciousness? Sarah Igo tracks the quest for privacy from the invention of the telegraph onward, revealing enduring debates over how Americans would—and should—be known. The Known Citizen is a penetrating historical

investigation with powerful lessons for our own times, when corporations, government agencies, and data miners are tracking our every move. “ A mighty effort to tell the story of modern America as a story of anxieties about privacy...Shows us that although we may feel that the threat to privacy today is unprecedented, every generation has felt that way since the introduction of the postcard. ”

—Louis Menand, New Yorker

“ Engaging and wide-ranging...Igo ’ s analysis of state surveillance from the New Deal through Watergate is remarkably thorough and insightful. ”

As the use of technology has considerably increased in B2B e-commerce, it becomes imperative to address the issues of trust that emerge in the context of technology. Trust and Technology in B2B E-Commerce: Practices and Strategies for Assurance focuses on various trust issues that emerge from deployment of various e-commerce technologies in interorganizational relationships. Some of these issues relate to security, privacy, authentication, non-repudiation, quality of Web interface, system performance, infrastructure, and environmental factors. This book contributes to the ongoing process of developing a framework for understanding the process of building trust in B2B e-commerce.

Welcome to the Proceedings of ICCHP 2010! We were proud to welcome

participants from more than 40 countries from all over the world to this year ' s ICCHP. Since the late 1980s, it has been ICCHP ' s mission to support and reflect development in the field of " Assistive Technologies, " eAccessibility and eInclusion. With a focus on scientific quality, ICCHP has become an important reference in our field. The 2010 conference and this collection of papers once again fulfilled this mission. The International Programme Committee, comprising 106 experts from all over the world, selected 147 full and 44 short papers out of 328 abstracts submitted to ICCHP. This acceptance ratio of about half of the submissions demonstrates our strict pursuit of scientific quality both of the programme and in particular of the proceedings in your hands. An impressive number of experts agreed to organize " Special Thematic Sessions " (STS) for ICCHP 2010. These STS help to bring the meeting into sharper focus in several key areas. In turn, this deeper level of focus helps to collate a state of the art and mainstream technical, social, cultural and political developments.

Democratic Global Governance is a component of Encyclopedia of Institutional and Infrastructural Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. The theme on Democratic Global Governance relates the critical international issues of the post-war era to the major decisions of the UN and its IGO network. It is divided into two topics: the first concerns global governance and the collective decision processes of the UN system, while the second reviews and analyzes the impact of the nongovernmental sector as it has grown in strength and become part of a nascent global civil society. This volume is aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

The Law of Quantum Springer

It has come to pass that national security, economic growth, and transportation safety – not to mention such infrastructure as banking and electricity – are severely dependent on the positioning information, navigation capabilities, and time dissemination provided by Global Navigation Satellite System (GNSS). However, GNSS is not risk-free. The more humanity depends on GNSS, the more risks it has to face. It is irresponsible to wait for an accident to happen merely to

justify the need for an appropriate GNSS civil liability regime. This hugely important book examines the structure of such a regime in unprecedented depth and proposes a uniform governance structure composed of an institutional framework and a legal system for GNSS, with safety-of-life signals at its core. Exploring whether the current international law (including air law and space law conventions) is adequate to deal with the issue of civil liability in the context of GNSS, the author confronts and responds to such crucial issues as the following: ensuring that parties suffering damage caused by GNSS get fair, prompt, and adequate compensation; balancing the interests of the GNSS industry in order for it to maintain its sustainable development; identifying legal gaps arising in the GNSS context and how we should move forward; determining which parts of the value chain of GNSS may qualify as origins of damage; and construing GNSS civil liability mainly from contractual, product, and general tort liability perspectives. The author assesses various solutions for GNSS civil liability based on their feasibility, including an institutional defence against the doctrine of sovereign immunity and recommendations on how several international organisations can work together in this endeavour. He examines scholarships, travaux préparatoires, conference documents, and treaties, as well as national legislation. A hypothetical case where damage is caused by GNSS is elaborated, illustrating each legal relationship and causal link. In its committed urging of GNSS signal providers to improve the stability of the satellite navigation systems and its

insightful recommendations on how to promote public safety, this book offers a roadmap indicating a truly viable international regime of GNSS civil liability. Relevant international organisations and States, as well as practitioners, are sure to respond positively to its unique and important analysis.

This book gives a comprehensive overview of all relevant elements in topography and their practical application. It elaborates on the classical representation of terrain on maps such as cartographic projections, together with their classification, scale, and geographical elements. It is richly illustrated with photographs, maps and figures, in which the theoretical explanations are clarified. Readers will become acquainted with the physical characteristics of the ground, i.e. tectonic and erosive shapes, the importance and classification of terrain, genetic (fluvial, abrasive, glacial, karst) and topographic types such as higher (mountains, hills, peaks) and lower terrain (valleys, fields). In addition, the book discusses cartometry and coordinate systems, orientation in space (geographic, topographic, tactical) including by means of maps, instruments and the night sky and elaborates new techniques and technologies such as aerial photogrammetric imagery, global navigation satellite systems and LiDAR. The book also includes methods for the practical execution of concrete measurement operations, such as determining position and movement on land with maps, compass and azimuth which makes it especially useful for practitioners and professionals, e.g., for landscape planning, military exercises, mountaineering, nature walks etc. As such it offers a valuable guide not only for undergraduate students but also for

researchers in the fields of geography, geosciences, geodesy, ecology, forestry and related areas looking for an overview on topography. Uniquely, the book also features an extensive glossary of topographical terms.

After the Robot Wars, MI6 sends a commando from the remote Kuiper belt to the Earth to intercept an escaping double agent. Although the time frame is tight, the team members are more interested in finding a mysterious legend than finding the traitor. They don't change their individual goals even when they become the hunted. What could be more important than their lives? A 9mm question. During a military experiment, a time traveller who died six hundred years ago re-incarnates. After years of failing to find an explanation for the incident, the British counter-intelligence sends him from the Kuiper Belt to the distant Earth. As an expert in the 20th-21st Century, he has to assist in the capture of a desert agent. But on Earth, team members are not the least interested in the desert. Soon the time traveller must decide: he will kill, or he will be killed. He is forced to take his fate into his own hands; together with his 9mm. But it is hard for him since, in addition to his severe PTSD, he appreciates everything more whose calibre is at least .500 Magnum. But there is no time for emotion in the whirlwind of events, he must keep a cool head. Which is too hard for him to do. Especially

when he must meet the memory of his dead loved ones and he knows that changing the past has no effect on what has already happened. Because the future is not written, and the past is not permanent. A fast-paced story of tomorrow that began fifty years ago. Robots, augmented intelligence, holography, gene modification, and the law of quantum; which we know nothing about but are actively using. This book examines how foreign direct investment (FDI) inflows to Central and Eastern Europe have changed after the Great Recession. It argues that beyond their cyclical effects, the economic crisis and the changing competitiveness of Central and Eastern European countries have had structural impacts on FDI in the region. FDI has traditionally been viewed as the key driver of national development, but the apparent structural shift means that focusing on cheap labour as a competitive advantage is no longer a viable strategy for the countries in the region. The authors argue that these countries need to move beyond the narrative of upgrading (attracting FDI inflows with increasingly higher value added), and focus on ensuring greater value capture instead. A potential way for doing this is by developing the conditions in which innovative national companies can emerge, thrive and

eventually develop into lead firms of global value chains. The book provides readers with a highly informative account of the reasons why this shift is necessary, as well as diverse perspectives and extensive discussions on the dynamics and structural impacts of FDI in post-crisis Central and Eastern Europe.

The popularity of an increasing number of mobile devices, such as PDAs, laptops, smart phones, and tablet computers, has made the mobile device the central method of communication in many societies. These devices may be used as electronic wallets, social networking tools, or may serve as a person's main access point to the World Wide Web. The Handbook of Research on Mobile Software Engineering: Design, Implementation, and Emergent Applications highlights state-of-the-art research concerning the key issues surrounding current and future challenges associated with the software engineering of mobile systems and related emergent applications. This handbook addresses gaps in the literature within the area of software engineering and the mobile computing world.
