This review incorporates the views and visions of 2,000 clinicians and other health and social care professionals from every NHS region in England, and has been developed in discussion with patients, carers and the general public. The changes proposed are locally-led, patient-centred and clinically driven. Chapter 2 identifies the challenges facing the NHS in the 21st century: ever higher expectations; demand driven by demographics as people live longer; health in an age of information and connectivity; the changing nature of disease; advances in treatment; a changing health workplace. Chapter 3 outlines the proposals to deliver high quality care for patients and the public, with an emphasis on helping people to stay healthy, empowering patients, providing the most effective treatments, and keeping patients as safe as possible in healthcare environments. The importance of quality in all aspects of the NHS is reinforced in chapter 4, and must be understood from the perspective of the patient's safety, experience in care received and the effectiveness of that care. Best practice will be widely promoted, with a central role for the National Institute for Health and Clinical Excellence (NICE) in expanding national standards. This will bring clarity to the high standards expected and quality performance will be measured and published. The review outlines the need to put frontline staff in control of this drive for quality (chapter 5), with greater freedom to use their expertise and skill and decision-making to find innovative ways to improve care for patients. Clinical and managerial leadership skills at the local level need further development, and all levels of staff will receive support through education and training (chapter 6). The review recommends the introduction of an NHS Constitution (chapter 7). The final chapter sets out the means of implementation.

Think back to a time when paramedics didn’t exist. When “drivers” simply brought injured patients to the hospital. When the EMS industry was in its infancy. A time before Nancy Caroline. Dr. Caroline’s work transformed EMS and the entire paramedic field. She created the first national standard curriculum for paramedic training in the United States. She also wrote the first paramedic textbook: Emergency Care in the Streets. The impact that Dr. Caroline had on EMS and health care spanned across the U.S. and abroad. From establishing EMS systems to training paramedics, to providing better nourishment and health care for orphans, her work had a profound impact on humanity. Throughout her life, Dr. Caroline brought a sense of excitement, joy, and humor to her work. The American Academy of Orthopaedic Surgeons is proud to continue Dr. Caroline’s legacy. Her sense of excitement and humor live on in this text, which is dedicated to her. The Sixth Edition honors Dr. Caroline’s work with a clear, fun, understandable writing style for which she was known. Welcome back a familiar training companion to your classroom! Say hello to Sidney Sinus, AV Abe, and a cast of memorable characters and amusing anecdotes. Make learning for your students more fun!

Roadcraft is the official Police Driver’s Handbook, approved by the Association of Chief Police Officers, and is used by the police service to train police drivers, but it is useful for any driver wishing to improve their skills and safety to a more advanced level. Roadcraft aims to help people become better drivers by increasing awareness of all factors that affect driving, such as the capability of the driver, characteristics of the vehicle, and road and traffic conditions. This new edition has been prepared in close consultation with a working group of senior police driving instructors and other police and civilian advance driver training experts. It has been updated to reflect recent changes in the legislative framework surrounding driving and emergency response driving and new methodologies in teaching safe driving. It now also incorporates information on automotive engineering advances such as ABS and SatNav devices and their effect on driving. A new chapter has been added to teach drivers the physical and psychological aspects of driving and how to develop mental skills to become a better driver.

The driving test reaches its 80th anniversary in 2015, and this commemorative edition of the Highway Code is a celebration of that milestone in British road safety. Updated for 2015, The Official Highway Code is essential reading for all road users in England, Scotland and Wales, providing all the latest rules of the road and traffic signs. All road users have a responsibility to keep their knowledge up-to-date, so make sure you do just that with the latest edition of this handy reference guide. Every day, on average, five people are killed and 60 people are seriously injured on our roads. If we're to bring those figures down, it's vital that all road users - drivers, motorcyclists, cyclists, horse riders and pedestrians - are familiar with all the rules in The Official Highway Code. This 2015 edition includes the new drug-driving laws, HGV speed limit changes on single and dual carriageways in England and Wales, updated drink-driving limits in Scotland and general rule changes. The Highway Code is available in just about any format you can think of and is constantly updated to reflect changes in technology, understanding and the law. Please continue to read it - not just as a learner driver, but as a responsible lifelong road user - so we can keep Britain's roads among the safest in the world.

The Department of Health has until recently been focusing on speed of response as a measure of performance of the ambulance service, rather than on clinical outcomes for patients. The ambulance service achieves high levels of public satisfaction but there are wide variations in ambulance trusts' efficiency and the NAO concludes that the system has not delivered the best value for money to date. The 8-minute response target, intended for the most seriously ill patients, is one of the most demanding in the world. However, its application has skewed ambulance trusts' approach to performance measurement and management. The target is also applied to a much wider group of patients than intended. The report identifies various inefficiencies in the system, with cost per incident varying between £176 and £251. There is scope across the urgent and emergency care system to make more of different ways of responding to patients, such as clinical advice to callers over the phone and taking patients to minor injuries units rather than A&E departments. If all 11 trusts adopted the best practice currently being used in at least one trust, the NHS could save £165 million a year. The elements of the emergency care system are not yet fully integrated and this leads to delays in turnaround times at hospital A&Es. Over one-fifth of patient handovers take longer than the recommended 15 minutes. The new clinical quality indicators introduced from April offer the potential for a fuller measurement of performance based on outcomes.

"The UK Study of the Abuse and Neglect of Older People, carried out by the National Center for Social Research (NatCen) and King's College London (KCL), was commissioned by Comic Relief and the Department of Health. Over 2,100 people in England, Scotland, Wales, and Northern Ireland took part in the survey between March and September 2006. The survey included people aged 66 and over living in provate households (including sheltered accommodation)."--Page 3.

"The six modules aim to help skilled practitioners think critically and make effective decisions on the basis of solid knowledge and understanding of these complications. When using the modules for basic midwifery programmes, it is understood that students should already be competent in most of the basic skills such as measuring blood pressure, performing a vaginal examination, conducting a normal delivery and prevention of infection. The modules were released in 1996 and have now been updated in line with recent evidence and the WHO clinical guidelines. Each module can be taught independently of the other modules. It is however advisable to work through all of them."--World Health Organization website.

The new edition of Major Incident Medical Management and Support is a vital component in the blended learning course from Advanced Life Support Group (ALSG), which aims to provide hospital staff at all levels with essential information on the preparation, management and support elements of dealing with casualties in a major incident. Split into five sections, each focuses on the elements requisite in preparing for, and responding, to a major incident. The first section discusses the epidemiology and incidences of major incidents and the

structured approach to the hospital response. The second section contains the preparation required in planning for major incidents, including equipment and training. The third section covers the management of a major incident, concentrating on the clinical, nursing and management hierarchies. The fourth includes the various stages of support in a major incident, including declaring an incident and activating the plan, the reception, triage, definitive care and recovery phases of an incident. The final section focuses on special incidents which require additional consideration, including those involving hazardous chemicals, burns and children. Written in collaboration with the National Emergency Planning, Major Incident Medical Management and Support is an invaluable reference in the emergency department and beyond for staff needing to prepare for the rare, but inevitable, hospital major incidence response.
