Beauty and ugliness are two sides of the same coin; by ugliness we usually mean the opposite of beauty and we often define the first in order to understand the nature of the second. But the various depictions of ugliness over the centuries are richer and more unpredictable than is commonly thought. The striking images and anthological quotations in *On Ugliness* lead us on an extraordinary journey through the passions, terrors and nightmares of almost three thousand years, where acts of rejection go hand in hand with touching instances of empathy, and an aversion to deformity is accompanied by seductive violations of all classical canons. With his characteristic wit and erudition, Umberto Eco draws on examples in art and literature from ancient times to the present day. Abundantly illustrated with demons, madmen, vile enemies and disquieting presences, with freaks and the living dead, *On Ugliness* is conceived for a vast and diverse readership, and is an invaluable companion volume to *On Beauty*.

Provides tools and techniques to identify and address distortions and to interpret data coming from Lidar sensing technology This book covers the issues encountered in separating the backscatter and transmission terms in the LIDAR

equation when profiling the atmosphere with zenith-directed and vertically-scanning Lidars. *Solutions in Lidar Profiling of the Atmosphere* explains how to manage and interpret the Lidar signals when the uncertainties of the involved atmospheric parameters are not treatable statistically. The author discusses specific scenarios for using specific scenarios for profiling vertical aerosol loading. *Solutions in Lidar Profiling of the Atmosphere* emphasizes the use of common sense when interacting with potentially large distortions inherent in most inversion techniques. Addresses the systematic errors in LIDAR measurements Proposes specific methods to estimate systematic distortions Explains how to apply these methods to both simulated and real data *Solutions in Lidar Profiling of the Atmosphere* is written for scientists, researchers, and graduate students in Meteorology and Geophysics.

The first part of this book is of an epistemological nature and develops an original theory of scientific objectivity, understood in a weak sense (as intersubjective agreement among the specialists) and a strong sense (as having precise concrete referents). In both cases it relies upon the adoption of operational criteria designed within the particular perspective under which any single science considers reality. The "object" so attained has a proper ontological status, dependent on the specific character of the criteria of reference (regional ontologies). This justifies a form of scientific realism. Such perspectives are also the result of a complex cultural-historical situation. The awareness of such a "historical determinacy" of science justifies including in the philosophy of science the problems of ethics of science, relations of science with metaphysics and social dimensions of science that overstep the traditional restriction of the philosophy of science to an epistemology of science. It is to this "context" that the second part of the book is devoted.

careful mention of the source. The dictionary is especially rich in personal names re-checked against the sources for the 3rd Italian edition, and in scientific terms, which have been categorized according to discipline. Each entry has a clear structure and typography making it easy to navigate. "For a number of years now, scholars at ease in Italian have benefitted enormously from the riches, layout, concision, and accuracy of Professor Montanari's "Vocabolario della Lingua Greca," with its added advantage of the inclusion of names. Hence classicists in general will welcome the English version of this very valuable resource." Professor Richard Janko, "University of Michigan" Franco Montanari is a giant in our field, and his Dictionary is a major leap forward for us . Professor Gregory Nagy, "Harvard University"

"Approximate and Renormgroup Symmetries" deals with approximate transformation groups, symmetries of integro-differential equations and renormgroup symmetries. It includes a concise and self-contained introduction to basic concepts and methods of Lie group analysis, and provides an easy-to-follow introduction to the theory of approximate transformation groups and symmetries of integro-differential equations. The book is designed for specialists in nonlinear physics - mathematicians and non-mathematicians - interested in methods of applied group analysis for investigating nonlinear problems in physical science and engineering. Dr. N.H. Ibragimov is a professor at the Department of Mathematics and Science, Research Centre ALGA, Sweden. He is widely regarded as one of the world's foremost experts in the field of symmetry analysis of differential equations; Dr. V. F. Kovalev is a leading scientist at the Institute for Mathematical Modeling, Russian Academy of Science, Moscow.

There are good reasons to look at violence from new perspectives. In its endless manifestations violence is part and parcel of human existence, and is very probably

a constituting element of human society. And yet violent action - warfare, penalties, insults, feuding, assault, murder, rape, suicide, sports - remains in all its complexity one of the least understood fields of human social life. The book's contributors identify the symbolic and ritualized aspects of violence, and suggest ways of 'reading' violence as it occurs in the world, whether as violent duelling and age-group violence in Southern Ethiopia, bullfighting in Iberia, cattle rustling in Kenya, guerrilla and militia wars in Colombia, or public executions in China. These case studies suggest that 'violence' is not a simple, universal urge, but is contingent and context-dependent, shaped by social relations of power, force and dominance. To be the victim of violence is a humiliating and frightening experience. But the many ambiguities that occur in the use of violence must be considered, to understand why peace seems only to exist as a contrast to the violation of peace.

Having trouble understanding or conversing with native Russian speakers? If so, try this book! The purpose of this book is to provide the reader with conversational dialogues in Russian that use 100% real Russian. As language learners ourselves, we understand the desire to learn the real Russian language as used by native speakers. Textbook dialogues and grammar books are not only boring, but they also don't represent the real Russian language that is used every day. With our book Russian Conversation Made Natural, you can immerse yourself in real Russian conversations that tell an authentic story through a variety of dialogues. Each chapter builds upon the narrative by featuring short, genuine exchanges between native Russian speakers in both formal and informal settings. You will find conversations between close friends, coworkers, family members, classmates and strangers that will help prepare you to speak Russian in the real world. Along the way you'll also find several situational scenarios from daily life to improve your Russian language ability. These include picking up prescriptions at the pharmacy, checking out books at the library and ordering food at a restaurant. Each dialogue has been written and edited by native Russian speakers from Russia, so you can be absolutely sure you are getting the most natural Russian grammar, vocabulary and phrases. Each chapter also comes complete with comprehension questions to test your understanding of the story and the Russian used. No drills or grammatical exercises are necessary to learn Russian! Our language learning method focuses on

the power of extensive reading and listening to achieve fluency, which you will find more information on in the introduction to this book. (The level of the material is best suited for intermediate learners or beginners who are looking for a challenge.) Grab your copy now and get started today!
