**42.2 Adaptive Immune
Response - Biology 2e |
OpenStax**
a biological preparation that
improves immunity to a particular

disease, typically contains an agent
that resembles a disease-causing
microorganism, and is often made
from weakened or killed forms of
the microbe, its toxins or one of
its surface proteins, The agent
stimulates the body's immune
system to recognize the agent as
foreign, destroy it, and
"remember" it, so that the immune
system can more easily recognize
and destroy any of these
microorganisms that it later
encounters

The immune system has
to be regulated to
prevent wasteful,

unnecessary responses to harmless substances, and more importantly so that it does not attack “ self. ” The acquired ability to prevent an unnecessary or harmful immune response to a detected foreign substance known not to cause disease is described as immune tolerance. Immune tolerance is crucial for maintaining mucosal homeostasis given the tremendous number of foreign substances (such as food proteins) that APCs of the oral ...
