Immune System Questions and Answers - QforQuestions

Key Concepts: Terms in this set (39) endocytosis of a pathogen by a

phagocyte. ... when the memory cells of the immune system aren't

activated or responding to a pathogen exposure, what phase of the

cell cycle are they likely in? Pasteur; made vaccine with rabies

infected rat spinal cord.

[Immunity_POGIL_answers - 'IDI'W mmmm How does our immune ...](#)

a biological preparation that improves immunity to a particular disease, typically

contains an agent that resembles a disease-

causing microorganism, and is often made from

weakened or killed forms of the microbe, its

toxins or one of its surface proteins, The

agent stimulates the body's immune system to

recognize the agent as foreign, destroy it,

and "remember" it, so that the immune system

can more easily recognize and destroy any of

these microorganisms that it later encounters

The immune system has to be regulated to

prevent wasteful, unnecessary responses to

harmless substances, and more importantly so

that it does not attack "self." The acquired

ability to prevent an unnecessary or harmful

immune response to a detected foreign

substance known not to cause disease is

described as immune tolerance. Immune

tolerance is crucial for maintaining mucosal

homeostasis given the tremendous number of

foreign substances (such as food proteins)

that APCs of the oral ...
