-

Quiz 2: Cells and Chemicals of the Immune System

Format = Fill in the blank, multiple choice, matching, short answer

immunity answer key - summitnyack.com

Antibodies are involved in the body's defense against pathogens and toxins in the extracellular environment.

Mechanisms of adaptive specific immunity that involve B cells and antibody production are referred to as humoral immunity. The maturation of T cells occurs in the thymus. T cells function as the central orchestrator of both innate and adaptive immune responses.

The Basics of Immunology: An Introductory Unit for High ...

The immune system has to be regulated to prevent wasteful, unnecessary responses to harmless substances, and more importantly so that it does not attack "self." The acquired ability to prevent an unnecessary or harmful immune response to a

detected foreign substance known not to cause disease is described as immune tolerance. Immune tolerance is crucial for maintaining mucosal homeostasis given the tremendous number of foreign substances (such as food proteins) that APCs of the oral ...
