## Readings for Learning to Teach in the Secondary School Inclusion in Action

Since the first edition of this established text was published in 1988, action research has gained ground as a popular method amongst educational researchers, and in particular for practising teachers doing higher-level courses. In this new edition Jean McNiff provides updates on methodological discussions and includes new sections of case study material and information on supporting action research. The book raises issues about how action research is theorised, whether it is seen as a spectator discipline or as a real life practice, and how practitioners position themselves within the debate. It discusses the importance for educators of understanding their own work and showing how their educative influence can lead to the development of good orders in formal and informal learning settings and in the wider community. This second edition comes at a time when, after years of debate over what counts as action research, it is now considered an acceptable and useful part of mainstream research practice.

This book presents a research focus on diversity and inclusivity in mathematics education. The challenge of diversity, largely in terms of student profiles or contextual features, is endemic in mathematics education, and is often argued to require differentiation as a response. Typically different curricula, text materials, task structures or pedagogies are favoured responses, but huge differences in achievement still result. If we in mathematics education seek to challenge that status quo, more research must be focussed not just on diversity but also on the inclusivity, of practices in mathematics education. The book is written by a group of experienced collaborating researchers who share this focus. It is written for researchers,

---

research students, teachers and in-service professionals, who recognise both the challenges but also the opportunities of creating and evaluating new inclusive approaches to curriculum and pedagogy – ones that take for granted the positive values of diversity. Several chapters report new research in this direction. The authors are part of, or have visited with, the mathematics education staff of the Faculty of Education at Monash University, in Melbourne, Australia. The chapters all focus on the ideas of development in both research and practice, recognising that the current need is for new inclusive approaches. The studies presented are set in different contexts, including Australia, China, the United States, and Singapore.

To promote behavioural change and improve decision making, we must work with the subconscious. Inclusion Nudges target the advantages and shortcomings of our unconscious mind and decision-making processes in order to obtain the desired and needed changes. In this Guidebook, the concept and the three types of Inclusion Nudges are fully explained and illustrated with over 70 practical interventions to promote behaviour, culture, and systems change to mitigate unconscious bias and create more inclusive organisations. The Inclusion Nudges Guidebook is for those who... \* Struggle with getting a change to 'stick'. \* Want to improve decision making and performance. \* Are challenged with translating an ideal goal into behaviors to achieve that goal. \* Find it hard to understand what motivates people to make decisions. \* Want to get more people engaged in

their work. Everyone can learn to design Inclusion Nudges. We believe that if all internal agents of organisational change master these techniques, our actions and behaviours will better leverage the full potential of all people, thereby producing more successful organisations. For this innovative concept and work, the authors, Lisa Kepinski & Tinna C. Nielsen, have been named to The Economist's Global Diversity List as "Top 10 Diversity Consultants" in November 2015.
