An investigation into climate change and increasingly dangerous hurricanes from the New York Times–bestselling author of *The Republican War on Science*. A leading science journalist delves into a red-hot debate in meteorology: whether the increasing ferocity of hurricanes is connected to global warming. In

the wake of Katrina, Chris Mooney follows the careers of leading scientists on either side of the argument through the 2006 hurricane season, tracing how the media, special interests, politics, and the weather itself have skewed and amplified what was already a fraught scientific debate. As Mooney puts it: “Scientists, like hurricanes, do extraordinary things at high wind speeds.” Mooney—a New Orleans native, host of the *Point of Inquiry* podcast, and author of *The Republican Brain*—has written “a well-researched, nuanced book” that closely examines whether we as a society should be held responsible for making hurricanes even bigger monsters than they

already are (The New York Times). “Mooney serves his readers as both an empiricist who gathers data and an analyst who puts it into context. The result is an important book, whose author succeeds admirably in both his roles.” —The Plain Dealer “Engaging and readable . . . Mooney catches real science in the act and, in so doing, weaves a story as intriguing as it is important.” —Los Angeles Times Book Review “Mooney has hit upon an important and controversial topic, and attacks it with vigor.” —The Boston Globe “An absorbing, informed account of the politics behind a pressing contemporary controversy.” —Kirkus Reviews

* Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. By reading this summary, you will learn why and how mankind is changing the planet's climate in a sustainable way, with unpredictable consequences. You will also learn : why carbon dioxide in the atmosphere is so dangerous; why mankind has not yet taken the true measure of the danger; how temperature increases are permanently changing very complex climate systems and ecosystems; that the ice at the poles is in danger of disappearing in the near future, with dramatic consequences for society; what you can do at your level to reduce the damage. You have probably heard about global warming. However, it is difficult to form an opinion in this area. Contradictory statements follow one another, the consequences on the Earth and human beings are unclear, the reforms initiated by governments are timid and piecemeal. What

should we think? Is the emergency really declared? Is global warming natural or man-made? Does humanity still have time to take the necessary measures? The former vice-president of the United States and famous defender of ecology, Al Gore, answers these questions. Are you ready to take the right measure of the situation? *Buy now the summary of this book for the modest price of a cup of coffee!

“This book should be read by women and men who have trusted, for too long, the companies whose products get inside their bodies and their minds.” —Ralph Nader, political activist and consumer advocate Lead in lipstick? 1,4 dioxane in baby soap? Coal tar in shampoo? How is this possible? Simple. The \$35 billion cosmetics industry is so powerful that they've kept themselves unregulated for decades. Not one cosmetic product has to be approved by the U.S. Food and Drug Administration before hitting the market. Incredible? Consider this: - The European Union has banned more

than 1,100 chemicals from cosmetics. The United States has banned just 10. Only 11% of chemicals used in cosmetics in the U.S. have been assessed for health and safety—leaving a staggering 89% with unknown or undisclosed effects. More than 70% of all personal care products may contain phthalates, which are linked to birth defects and infertility. Many baby soaps are contaminated with the cancer-causing chemical 1,4 dioxane. It's not just women who are affected by this chemists' brew. Shampoo, deodorant, face lotion and other products used daily by men, women and children contain hazardous chemicals that the industry claims are "within acceptable limits." But there's nothing acceptable about daily multiple exposures to carcinogenic chemicals—from products that are supposed to make us feel healthy and beautiful. *Not Just a Pretty Face* delves deeply into the dark side of the beauty industry and looks to hopeful solutions for a healthier future. This scathing investigation peels away less-than-lovely layers to expose an industry

in dire need of an extreme makeover. "Thank you Stacy for exposing the truth. The jig is up!" —Fran Drescher, star of the Emmy Award–winning series *The Nanny*

The science of climate change is a complex subject that balances the physical record and scientific fact with politics, policy, and ethics - and is of particular importance to the geosciences. This thoughtfully crafted new text and accompanying media encourage non-science majors to practice critical thinking, analysis, and discourse about climate change themes. Taking a cross-disciplinary approach, acclaimed educator and researcher, David Kitchen, examines

not only the physical science, but the social, economic, political, energy, and environmental issues surrounding climate change. His goal: to turn knowledge into action, equipping students with the knowledge and critical skills to make informed decisions, separate facts from fiction, and participate in the public debate.

The award-winning climate scientist Michael E. Mann and the Pulitzer Prize-winning political cartoonist Tom Toles have been on the front lines of the fight against climate denialism for most of their careers. They have witnessed the manipulation of the media by business and political interests and the unconscionable play to partisanship on issues that affect the well-being of billions. The lessons they have learned have been invaluable, inspiring this brilliant, colorful escape hatch from the madhouse of the climate wars. The Madhouse Effect portrays the intellectual pretzels into which denialists must twist logic to explain away the clear evidence that human activity has changed Earth's climate. Toles's cartoons collapse counter-scientific strategies into their biased components, helping readers see how to best strike at these fallacies. Mann's expert skills at science communication aim to restore sanity to a debate that continues to rage against widely acknowledged scientific consensus. The synergy of these two climate science crusaders enlivens the

gloom and doom of so many climate-themed books—and may even convert die-hard doubters to the side of sound science.

A key goal of fisheries management is to regulate extractive pressure on a resource so as to ensure social, economic and ecological sustainability. This text provides an accessible entry point for students and professionals to management science as developed in fisheries, in order to facilitate uptake of the latest ideas and methods. Traditional management approaches have relied upon a stock assessment based on existing understanding of resource status and dynamics, and a prediction of the likely future response to a static management proposal. However all such predictions include an inherent degree of uncertainty, and the last few decades have seen the emergence of an adaptive approach that uses feedback control to account for unknown future behaviour. Feedback is achieved via a control rule, which defines a relationship between perceived status of the resource and a management action. Evaluations of such rules usually include computer simulation testing across a broad range of uncertainties, so that an appropriate and robust rule can be selected by stakeholders and managers. The book focuses on this approach, which is usually

referred to as Management Strategy Evaluation. The book is enriched by case study examples from different parts of the world, as well as insights into the theory and practice from those actively involved in the science of fisheries management.

A New York Times bestseller! The follow up to the #1 New York Times bestselling *An Inconvenient Truth* and companion to Vice President Al Gore's new documentary, *An Inconvenient Sequel: Truth to Power*, this new book is a daring call to action. It exposes the reality of how humankind has aided in the destruction of our planet and delivers hope through groundbreaking information on what you can do now. Vice President Gore, one of our environmental heroes and a leading expert in climate change, brings together cutting-edge research from top scientists around the world; approximately 200 photographs and illustrations to visually articulate the subject matter; and personal anecdotes and observations to document the fast pace and wide scope of global warming. He presents, with alarming clarity and conclusiveness (and with humor, too) that the fact of global climate change is not in question and that its consequences for the world we live in will be assuredly disastrous if left unchecked. Follow Vice President Gore

around the globe as he tells a story of change in the making. He connects the dots of Zika, flooding, and other natural disasters we've lived through in the last 10+ years—and much more. The book also offers a comprehensive how-to guide on exactly how we can change the course of fate. With concrete, actionable advice on topics ranging from how to run for office to how to talk to your children about climate change, *An Inconvenient Sequel* will empower you to make a difference—and lets you know how exactly to do it. Where Gore's first documentary and book took us through the technical aspects of climate change, the second documentary is a gripping, narrative journey that leaves you filled with hope and the urge to take action immediately. This book captures that same essence and is a must-have for everyone who cares deeply about our planet.

The phrase 'here be monsters' or 'here be dragons' is commonly believed to have been used on ancient maps to indicate unexplored territories which might hide unknown beasts. This book maps and explores places between science and politics that have been left unexplored, sometimes hiding in plain sight - in an era when increased emphasis was put on 'openness'. The book is rooted in a programme of research funded by the Leverhulme Trust entitled: 'Making Science Public: Challenges and opportunities, which runs from 2014 to

2017. One focus of our research was to critically question the assumption that making science more open and public could solve various issues around scientific credibility, trust, and legitimacy. Chapters in this book explore the risks and benefits of this perspective with relation to transparency, responsibility, experts and faith.

Global Warming: Engineering Solutions goes beyond the discussion of what global warming is, and offers complete concrete solutions that can be used to help prevent global warming. Innovative engineering solutions are needed to reduce the effects of global warming. Discussed here are proposed engineering solutions for reducing global warming resulting from carbon dioxide pollution, poor energy and environment policies and emission pollution. Solutions discussed include but are not limited to: energy conversion technologies and their advantages, energy management and conservation, energy saving and energy security, renewable and sustainable energy technologies, emission reduction, sustainable development; pollution control and

measures, policy development, global energy stability and sustainability.

Al Gore is bad for the planet... Talk about really inconvenient truths--that's one of the many you'll find in Iain Murray's rollicking exposé of environmental blowhards who waste more energy, endanger more species, and actually kill more people (yes, that's right) than the environmental villains they finger. Did you know that estrogen from birth control and "morning after" pills is causing male fish across America to develop female sex organs? Funny how "pro-choice" and "environmentalist" liberals never talk about that. Or how about this: the Live Earth concert to "save the planet" released more CO2 into the atmosphere than a fleet of 2,000 Humvees emit in a year? We hear a lot about AIDS in Africa, but the number one killer of children in much of Africa is malaria--and guess who was responsible for banning the pesticide that used to have malaria under control? Iain Murray, a sprightly conservative environmental analyst with a long record of skewering liberal hypocrisy, has dug up seven of the all-time great environmental catastrophes

caused by the Left and exposed them in *The Really Inconvenient Truths*.

For readers of Ronald Wright, Rebecca Solnit, and Yuval Noah Harari, comes a compelling inquiry into our relationship with humanity's latest and greatest calamity In *The Environmentalist's Dilemma*, award-winning journalist Arno Kopecky zeroes in on the core predicament of our times: the planet may be dying, but humanity's doing better than ever. To acknowledge both sides of this paradox is to enter a realm of difficult decisions: Should we take down the government, or try to change it from the inside? Is it okay to compare climate change to Hitler? Is hope naive or indispensable? How do you tackle collective delusion? Should we still have kids? And can we take them to Disneyland? Inquisitive and relatable, Kopecky strikes a rare note of optimistic realism as he guides us through the moral minefields of our polarized world. From start to finish, *The Environmentalist's Dilemma* returns to the central question: How should we engage with the story of our times?

Promise and Peril in an Age of Climate Crisis Solution Tree Press

The culture an organisation cultivates as an employer is just as important to its success as the brand image of its products or services. A culture that is at odds with the organisation's commercial activities is a very powerful signal to customers, employees and other stakeholders; it is a signal that will impact on the employers' sales, market reputation, share value and their ability to attract and retain the kind of employees that they need. In fact, employer branding is a complex process that involves internal and external customers, marketing and human resource professionals. Helen Rosethorn's book puts the whole topic into context, it explores some of the shortcomings of employer branding initiatives to date and provides a practical guide to the kind of strategy and techniques organisations need to embrace in order to make the most of their employer brand. At the heart of the book is the concept of the strategic employee lifecycle and ways in which an organisation should engage with potential, current and past employees. The Employer Brand focuses on the

experiences and perspectives of organisations that have applied employer brand practices. It is a book about marketing - and the relationship of customers and employees; about culture - and the need for fundamental change in the role of the human resources function; about psychology - and the changing aspirations of the next generation of employees; and about hard-nosed business - and the tangible and intangible benefits of a successful employer branding strategy and how to realize them.

Smart, funny, and fresh, The Barbaric Heart argues that the present environmental crisis will not be resolved by the same forms of crony capitalism and managerial technocracy that created the crisis in the first place. With his trademark wit, White argues that the solution might very well come from an unexpected quarter: the arts, religion, and the realm of the moral imagination.

Climate change is one of the most pressing issues facing the world today, as

it affects all sectors of life, be it global economics or human rights activism; timely action is required to avoid global catastrophe. Understanding the importance of climate change mitigation, renewable energies, clean technologies, and green development has become necessary for effective leadership. The Handbook of Research on Green Economic Development Initiatives and Strategies provides the necessary information to reduce the climate change vulnerability of socio-economic systems in the most cost-effective manner. This handbook of research is ideal for policy makers, non-governmental organizations (NGOs), government agencies, businesses, and professionals looking to temper the effects of climate change.
