Skyhorse Publishing Inc. While Jordan was in the University of Maryland's Shock Trauma Center, fighting for his life those two weeks from complications of a heat related injury, Tonya and I couldn't stop asking ourselves, as parents, what did we miss? What questions didn't we ask to keep Jordan safe? If we didn't know these questions, how many other parents don't know what questions to ask? There were several questions that we didn't ask, not because we

didn't care to know: the simple fact is that we didn't know the right questions to ask regarding the safety and well-being of our only son. We assumed as well as trusted-as so many parents of student athletes in America do when we let our student athletes play at the youth, high school, and collegiate sports level of competition. Through our experience of losing a child to a completely preventable injury, this book will not only educate but empower every parent, coach, and student athlete who reads it. Readers

will be educated on the signs and symptoms of heat related injuries, player safety, and questions to ask all coaches to keep your child safe while they are playing any sport at all competition levels. "We never want another parent to feel what we felt losing Jordan."

In this revised and expanded collection of essays on origins, mathematician Granville Sewell looks at the big bang, the fine-tuning of the laws of physics, and (especially) the evolution of life. Sewell explains why evolution is a fundamentally different and much more difficult problem than others solved by science, and why increasing numbers of scientists are now recognizing what has long been obvious to the layman, that there is no explanation possible without design. This book summarizes many of the traditional

arguments for intelligent design, but presents some powerful new arguments as well.

The future of journalism is hotly contested and highly uncertain reflecting developments in media technologies, shifting business strategies for online news, changing media organisational and regulatory structures, the fragmentation of audiences and a growing public concern about some aspects of tabloid journalism practices and reporting, as well as broader political, sociological and cultural changes. These developments have combined to impoverish the flow of existing revenues available to fund journalism, impact radically on traditional journalism professional practices, while simultaneously generating an increasingly frenzied search for sustainable and equivalent funding – and from a wide range of sources - to nurture and deliver quality journalism in the future. This book brings together

---

journalists and distinguished academic specialists from around the globe to present the findings from their research and to discuss the future of journalism, the shifting quality of its products, its wide ranging sources of finance, as well as the economic and democratic consequences of the significant changes confronting Journalism. The Future of Journalism details the challenges facing the press in contemporary societies and provides essential reading for everyone interested in the role of journalism in shaping and sustaining literate, civil and democratic societies. This book consists of special issues from Journalism Studies and Journalism Practice.

Artist Tim Pond's lively and engaging book fuses  
science with art, providing the reader with the skills,  
techniques and knowledge they need to create  
sketches of animals filled with life and  
movement. There are some very good books written  
on life drawing, yet when it comes to drawing wildlife,  
illustrators and artists often revert to working solely  
from photographs, which can leave the artwork  
looking lifeless and flat. In this inspirational book,  
artist Tim Pond shows you how to observe and draw  
animals in zoos, farms, wildlife parks and aquariums,  
teaching you some fascinating facts about the animals  
along the way and ultimately bringing you closer to  
nature. One of the challenges with sketching wildlife is  
that animals are constantly moving. However by  
having some basic understanding of the biology of an  
animal, such as knowing that a duck has a cheek or  
that a cheetah can't retract its claws, can influence how  
you might sketch them, and results in a lively drawing  
that captures the form, movement and ultimately the  
spirit of the animal in question. Combining scientific

---

knowledge with expert practical guidance is key to creating successful drawings of animals, and Tim's ability to convey this in a way that is both accessible and engaging makes this a unique and inspiring guide suitable for artists of all levels. Tim's book takes you on a journey of discovery that will enable you to develop the skills, techniques and knowledge you need to sketch a broad range of wildlife, encompassing mammals, reptiles, birds, fish and insects. It includes quick, gestural sketches as well as linear and tonal studies, in a variety of media - pencil, pen and ink, and watercolour. There are numerous studies comprising how to represent the different patterns of animals' coats, how to capture the plumage of an exotic bird in watercolour, and how to sketch a hippo's hooves, as well as guidance on tools, materials and basic techniques. The result is a treasure chest of fascinating facts, studies, sketches and annotated drawings that will not fail to ignite your enthusiasm for drawing animals from life.
