Recently widowed, Rebecca Parcell is too busy struggling to maintain her farm in Morristown to give a fig who wins the War for Independence. But rumors are spreading in the winter of 1780 that she's a Loyalist sympathizer who betrayed her husband to the British-quite a tidy way to end her disastrous marriage, the village gossips whisper. Everyone knows that her husband was a Patriot, a hero who died aboard a British prison ship moored in New York Harbor. But "everyone" is wrong. Parcell was a British spy, and General Washington-who spent that winter in Morristown-can prove it. He swears he'll safeguard Becca's farm if she unravels her husband's secrets. With a mob ready to exile her or worse, it's an offer she can't refuse. Escaped British prisoner of war Daniel Alloway was the last person to see Becca's husband alive, and Washington throws this unlikely couple together on an espionage mission to British-occupied New York City. Moving from glittering balls to an underworld of brothels and prisons, Becca and Daniel uncover a plot that threatens the new country's future. But will they move quickly enough to warn General Washington? And can Becca, who's lost almost everyone she loves, fight her growing attraction to Daniel, a man who always moves on?

This book presents a concise and modern coverage of scattering theory. It is motivated by the fact that experimental advances have shifted and broadened the scope of applications where concepts from scattering theory are used, e.g. to the field of ultracold atoms and molecules, which has been experiencing enormous growth in recent years, largely triggered by the successful realization of Bose-Einstein condensates of dilute atomic gases in 1995. In the present treatment, special attention is given to the role played by the long-range behaviour of the projectile-target interaction, and a theory is developed, which is well suited to describe near-threshold bound and continuum states in realistic binary systems such as diatomic molecules or molecular ions. The level of abstraction is kept as low as at all possible, and deeper questions related to mathematical foundations of scattering theory are passed by. The book should be understandable for anyone with a basic knowledge of nonrelativistic quantum mechanics. It is intended for advanced students and researchers, and it is hoped that it will be useful for theorists and experimentalists alike.
