The go-to resource for assessing and predicting functional abilities in persons with brain injury or cognitive decline has now been revised and expanded to reflect significant advances in the field. With a focus on key real-world capacities--independent living, vocational functioning, medication management, and driving--leading experts explore how individuals go about their daily lives, where

and why disruptions occur, and potential opportunities for improving function. Strategies for direct assessment are reviewed, from standard neuropsychological tests to multimodal approaches and technology-based tools. Chapters also provide functional assessment guidance for specific neurological and psychiatric conditions: dementia, traumatic brain injury, depression, schizophrenia, and others. New to This Edition *Incorporates over a decade of technological and methodological innovations. *Chapter on theories and models of everyday functioning. *Chapters on naturalistic assessment, wearable sensors, ambulatory assessment, and virtual-reality-based tools. *Practical clinical implications are highlighted throughout.

The state-of-the-art in NMR spectral analysis. This interactive tutorial provides readers with a comprehensive range of software tools and techniques, as well as the necessary theoretical knowledge required to analyze their spectra and obtain the correct NMR parameters. Modern Spectral Analysis provides expert guidance, by presenting efficient strategies to extract NMR parameters from measured spectra. A database of selected spectra and modern, powerful WIN-NMR software designed by Bruker are provided on the enclosed CD-ROM. The programs provided are 1 D WIN-NMR, WIN-DAISY, WIN-DR and WIN-

DYNAMICS, and direct data exchange between all these programs is possible. Readers are shown how they can obtain maximum structural information from their 1 D NMR spectra with time-saving computer assistance. Practical problems that can occur and their solutions are discussed at length using clear, easy-to-follow examples. Both homo- and heteronuclear and first- and second-order spin systems are demonstrated. Moreover, relaxation analysis, nuclear Overhauser effects and magnetic site exchange are all covered in this hands-on guide to NMR spectral analysis.

Although the function of nitric oxide in a regulatory capacity in the central and peripheral nervous system is widely recognized, the full scope of its actions and its interrelationships with other classes of regulatory molecules is just beginning to be comprehended. This volume contains a number of sophisticated and advanced methods essential for exploring the activity of nitric oxide in the brain. It will be a valuable tool for the established investigator and for those just entering the field. Comprehensive protocols included for detection of NO and related compounds by chemical, immunohistochemical, and in situ hybridization techniques Newly developed methods for the purification of neuronal and endothelial NO synthase, production of monoclonal antibodies to NO synthase, molecular cloning and expression of NO synthase, and control of NO synthase gene expression Assessment of NO-mediated functions in neurons, central nervous system, cerebral circulation, synaptic transmission, and vascular tone Calcium imaging by confocal microscopy, evaluation of the effect of NO on iron metabolism, and detection of heme oxygenase-1 and -2 message level and distribution Millimeter Wave Optical Dielectric Integrated Guides and Circuits American Bar Association

This much-needed reference equips electrical engineers, designers, and

researchers in the microwave industry with comprehensive, up-to-date information on the theoretical principles and practical applications of dielectric integrated guides and circuits.

A riveting thriller from the screenwriter of *Twin Peaks* and *The X-Files*. LAPD homicide detective and single mother Alex Delillo knows the risks of the job. But when a series of explosions is detonated by a serial bomber and Alex's teenage daughter is kidnapped, she discovers the catastrophic stakes as well. The bomber's next plan: to unleash his incendiary powers on live TV. No one can stop him—because no one can find him. What he's igniting in Alex is more than a contest of wills and a race against time. It's white-hot rage. And a mother's revenge.

When someone is diagnosed with obsessive-compulsive disorder (OCD), chances are they've been living with the symptoms for a long time. People with OCD may have long felt embarrassed by their thoughts and behaviors, which may include fear of contamination, the need for symmetry, pathological doubt, aggressive thoughts, repeating behaviors, and obsessive cleaning. *OCD: A Guide for the Newly Diagnosed* helps readers understand how OCD works so they can develop better strategies for coping with their symptoms. This pocket guide offers guidance for coping with the diagnosis itself, discusses stigmas related to OCD, and includes help for readers unsure of who they should tell about the diagnosis. Readers also learn about the most effective treatment approaches and easy ways to begin to manage their OCD symptoms. An OCD diagnosis can be a devastating event, or it can be a catalyst for positive change. Books in the *Guides for the Newly Diagnosed* series provide readers with all the tools they need to process a diagnosis in the healthiest way possible, and then move forward to manage their symptoms so that the disorder doesn't get in the way of

living a fulfilling life. This book has been awarded The Association for Behavioral and Cognitive Therapies Self-Help Seal of Merit — an award bestowed on outstanding self-help books that are consistent with cognitive behavioral therapy (CBT) principles and that incorporate scientifically tested strategies for overcoming mental health difficulties. Used alone or in conjunction with therapy, our books offer powerful tools readers can use to jump-start changes in their lives. This book is a part of New Harbinger Publications' *Guides for the Newly Diagnosed* series. The series was created to help people who have recently been diagnosed with a mental health condition. Our goal is to offer user-friendly resources that provide answers to common questions readers may have after receiving a diagnosis, as well as evidence-based strategies to help them cope with and manage their condition, so that they can get back to living a more balanced life. This book covers two applications of ontologies in software engineering and software technology: sharing knowledge of the problem domain and using a common terminology among all stakeholders; and filtering the knowledge when defining models and metamodels. By presenting the advanced use of ontologies in software research and software projects, this book is of benefit to software engineering researchers in both academia and industry.

The use of molecular structures for electronic response has seen astonishing advancement in the past five years. This volume presents contributions from makers, measurers, and modelers of molecular electronic species. Molecular structures and their designed responses are emphasized. Particular topics include molecular interconnects, optoelectronics, transistors, logic structures, and gate moieties. Comparisons with, and hybridization with, standard semiconductor electronics are described as well. Contributors include Noel S. Hush,

Mark A. Ratner, Jeffrey R. Reimers, Eldon G. Emberly, Jorge M. Seminario, Robert M. Metzger, J.-P. Launay, M.A. Reed, P.S. Weiss, M.P. Anantram, Deepak Srivastava, S.H.M. Persson, James M. Tour, K. Mullen, Andre Gourdon, Tomoji Kawai, C. Joachim, Yasuo Wada, Yishay Manassen, K. Matsushige, Masamichi Fujihira, H.C. Wolf, Ari Aviram, and D.L. Allara,.

Neurobiology of Monotremes brings together current information on the development, structure, function and behavioural ecology of the monotremes. The monotremes are an unusual and evolutionarily important group of mammals showing striking behavioural and physiological adaptations to their niches. They are the only mammals exhibiting electroreception (in the trigeminal sensory pathways) and the echidna shows distinctive olfactory specialisations. The authors aim to close the current gap in knowledge between the genes and developmental biology of monotremes on the one hand, and the adult structure, function and ecology of monotremes on the other. They explore how the sequence 'embryonic structure › adult structure › behaviour' is achieved in monotremes and how this differs from other mammals. The work also combines a detailed review of the neurobiology of monotremes with photographic and diagrammatic atlases of the sectioned adult brains and peripheral nervous system of the short-beaked echidna and platypus. Pairing of a detailed review of the field with the first published brain atlases of two of the three living monotremes will allow the reader to immediately relate key points in the text to features in the atlases and will extend a universal system of brain nomenclature developed in

eutherian brain atlases by G Paxinos and colleagues to monotremes.
