This open access book considers the development of the sharing and collaborative economy with a European focus, mapping across economic sectors, and country-specific case studies. It looks at the roles the sharing economy plays in sharing and redistribution of goods and services across the population in order to maximise their functionality, monetary exchange, and other aspects important to societies. It also looks at the place of the sharing economy among various policies and how the contexts of public policies,

legislation, digital platforms, and other infrastructure interrelate with the development and function of the sharing economy. The book will help in understanding the future (sharing) economy models as well as to contribute in solving questions of better access to resources and sustainable innovation in the context of degrowth and growing inequalities within and between societies. It will also provide a useful source for solutions to the big challenges of our times such as climate change, the loss of biodiversity, and recently the coronavirus disease pandemic (COVID-19). This book will be of interest to academics and students in economics and business, organisational studies, sociology, media and communication and computer science.

In 1986, after owning eleven BMWs in three years, Rob Siegel sent an unsolicited article to Roundel, the magazine of the BMW Car Club of America.

Little did he know that it would kick off 35 years of do-it-yourself automotive writing, and that his monthly column The Hack Mechanic? would attract a community of like-minded enthusiasts who, like Rob, try to come up with creative workarounds to keep their cars running without taking them to the dealer every time they hiccup. More than just "use 10mm wrench on bolt B" instructions, though, the columns have always been small journeys into passion and problem solving, philosophy lessons disguised as a repair articles, and short stories about getting into and hopefully out of automotive trouble. The Best Of The Hack Mechanic? is a selection of these pieces, including ones on how to buy a

vintage BMW and not get burned, the most creative way possible to lock your keys in a running car, why car folks will do just about anything to avoid buying a family minivan when the money obviously would be so much better spent on "something fun," why a car nut really does need seven cars, why the odds of having a car start is often inversely proportion to the number of cars in the driveway, why finding one of his father's tools is enough to make Rob cry, and why working on your car feels so damned good, all written in Rob's Hack Mechanic voice that hovers somewhere between J.D. Salinger, Bill Bryson, and David Sedaris. Informative, irreverent, and poignant, The Best Of The Hack Mechanic? will have you hoping Rob has another 35 years of columns in him. This book analyzes the changing dynamics of competition and the emergence of deglobalization trends and processes. The authors begin by explaining the role of technology on

---

globalization and its impact on competitive strategy. Then, they present a theoretical framework that outlines the connection between globalization and modern society. The book also delves into the shift toward deglobalization and addresses how the onset of the COVID-10 pandemic has accelerated the process. Concluding with a discussion of how the 4th Industrial Revolution has resulted in new paradigms for business, this book will fill a gap through its investigation of an emerging concept for scholars in international business.

The first in a series of highly practical, hands on, step-by-step photographic manuals, *Replacing Your Boat's Engine* fills a gap in the market for the DIY boat builder and repairer. It is a subject covered only in piecemeal fashion by the yachting press, which, like general boat repair manuals, can't go into the level of detail

Mike Westin does. This is a visual, hand-holding guide, dwelling on the practical details of replacing a boat's engine and related systems as it explains each procedure rather than focussing on the theory (which is relegated to an appendix, for those who wish to go further). Anyone who wishes to upgrade their boat's engine or replace an ailing or broken engine will find this step-by-step illustrated book a hand-holding godsend.
