This book analyzes the
changing dynamics of
competition and the
emergence of
deglobalization trends and
processes. The authors
begin by explaining the role
of technology on
globalization and its impact
on competitive strategy.
Then, they present a
theoretical framework that
outlines the connection
between globalization and
modern society. The book
also delves into the shift
toward deglobalization and
addresses how the onset of
the COVID-10 pandemic
has accelerated the
process. Concluding with a
discussion of how the 4th
Industrial Revolution has
resulted in new paradigms
for business, this book will
fill a gap through its
investigation of an
emerging concept for

scholars in international business.

This open access book explores the concept of Industry 4.0, which presents a considerable challenge for the production and service sectors. While digitization initiatives are usually integrated into the

central corporate strategy of larger companies, smaller firms often have problems putting Industry 4.0 paradigms into practice. Small and medium-sized enterprises (SMEs) possess neither the human nor financial resources to systematically investigate the potential and risks of introducing Industry 4.0. Addressing this obstacle, the international team of authors focuses on the development of smart manufacturing concepts, logistics solutions and managerial models specifically for SMEs. Aiming to provide methodological frameworks and pilot solutions for SMEs during their digital transformation, this innovative and timely book will be of great use to scholars researching technology management, digitization and small business, as well as practitioners within manufacturing companies. This book examines the results of a major study of innovation in organizations, calling into question most of the explanations of the innovation process that have been proposed in the past. The authors find that the innovation process is neither sequential and orderly, nor is it a matter of random trial-and-error; rather it is best characterized as a nonlinear dynamics system. They explain that the innovation journey involves motivating and coordinating people to

develop and implement ideas by engaging in transactions with others while making the adaptations needed to achieve desired outcomes within changing organizational contexts.

The small-block Chevrolet is easily the most popular V-8

engine ever built. It was introduced in 1955, and remained in production until the mid-1990s, powering legendary cars such as the 1955-1957 Chevys, Camaros, Impalas, Novas, Chevelles, and of course, the most popular sports car of all time, the Corvette. Of course, whether restoring or modifying one of these classics, the time comes when your small-block Chevy needs rebuilding. This updated version of Small-Block Chevrolet: Stock and High-Performance Rebuilds is a quality, step-by-step Workbench book that shows you how to rebuild a street or racing small-block Chevy in your own garage. It includes more than 600 color photos and easy-to-read text that explains every procedure a professional builder uses to assemble an engine, from crankshaft to carburetor. Detailed sections show how to disassemble a used engine,

inspect for signs of damage, select replacement parts, buy machine work, check critical component fit, and much more! Performance mods and upgrades are discussed along the way, so the book meets the needs of all enthusiasts, from restorers to hot rodders. **Small Block Chevrolet: Stock and High-Performance Rebuilds** is a must-have for every small-block Chevy fan.

Honda VT1100 Series 1995-2007 Springer Nature Additive manufacturing or 3D printing, manufacturing a product layer by layer, offers large design freedom and faster product development cycles, as well as low startup cost of production, on-demand production and local production. In principle, any product could be made by additive manufacturing. Even food and

living organic cells can be printed. We can create, design and manufacture what we want at the location we want. 3D printing will create a revolution in manufacturing, a real paradigm change. 3D printing holds the promise to manufacture with less waste and energy. We can print metals, ceramics, sand, synthetic materials such as plastics, food or living cells. However, the production of plastics is nowadays based on fossil fuels. And that 's where we witness a paradigm change too. The production of these synthetic materials can be based also on biomaterials with biomass as feedstock. A wealth of new and innovative products are emerging when we combine these two paradigm changes: 3D printing and biomaterials. Moreover, the combination of 3D printing with biomaterials holds the promise to realize a truly sustainable and circular economy.
