Ski Palala Press

Excerpt from Internal

Combustion Engine Manual

In an effort to present

briefly and clearly the

Internal Combustion Engine

problem to the uninitiated,,

the author has compiled the

data in this volume. It has

been the endeavor to

eliminate all obsolete

practice, to put forth the best modern practice, and to

illustrate all points by up-to-date commercial examples.

After close study of the

conditions existing in the

Internal Combustion Engine

course at the U.S. Naval

Academy, and after

voluminous reading to

discover the best general

method of presenting the

subject, the following was

thought the best sequence to

follow: (a) The subject of

fuels is first treated fully,

this being the fundamental

element that governs design

and operation. These fuels

follow in a natural sequence

which order is preserved

when carburetion is taken up

in Chapter V. (b) The engine

proper naturally divides

itself into four systems: (1)

fuel system,(2) ignition

system,(3) cooling

system,(4) lubrication

system. These are treated in detail in the above order and in Chapter X the four systems assembled are illustrated by modern commercial engines.

(c) Producer plants being closely allied to gas engines are given a short chapter at the end of the book. This volume being primarily intended as a text-book for mid-shipmen is necessarily limited in its scope by the time allowed for this course in the Naval Academy curriculum. This necessitates brevity and is responsible for many arbitrary statements contained herein. The endeavor has been to limit these to the closest approximation to the best practices where fuller explanation would extend the book to impossible limits. The author wishes to thank the various

manufacturers for the illustrations used in Chapter X, and the Hill Publishing Company for permission to reproduce some of the figures in Chapter XI.
