needed to control hazards, minimize manufacture where they are used risk and maximize workplace safety responsibly to produce the goods at these inherently dangerous locations and during potentially dangerous operations. Chemical processing, in one form or another, serves as the engine of a global economy. Raw materials, whether extracted by drilling and mining, grown and cultivated in crops, or recovered from reusable materials, must be refined and processed into useful bulk materials and chemicals. These processes usually involve work around or with chemicals that possess hazardous qualities such as flammability, explosiveness, toxicity, or reactivity. These refined materials and bulk chemicals are then delivered to in the next stage of

and products that make modern day living more comfortable and enjoyable. It is this process of chemical refinement and safe use and handling of these chemicals in manufacturing that is explored in this text, particularly the practice of assessing and controlling the risk associated with the industrial use of these highly hazardous chemicals (HHCs). You may know this policy and practice as "Process Safety Management". Work with HHCs clearly increases the risks and hazards at the job site where they are being stored, used and processed. Facility managers responsible for managing the complexities of

Maintenance and Operations (O and M) associated with industrial facilities, turn to trained, educated, and experienced safety professionals for reliable safety advice, training and management support. Industrial Safety professionals, be they General Safety Practitioner, or specialists such as Industrial Hygienist, Environmental Affairs Manager, Hazardous Waste Coordinator, Chemical Hygiene Officer, Project Safety Manager, or Occupational Health Nurse can benefit from the findings and suggestions presented in this text. The Safety Professional's Role: In Support of Industrial Facilities Operations and Maintenance (O and M) essentially serves as a roadmap of

recommendations that a Safety Professional, engaged in O and M support, can use to be more responsive to the many needs of his or her process plant.

Principles of Industrial Safety

CRC Press

High productivity, high quality, high morale, and associated low absenteeism are all products of a strong safety program. In the company's operational meetings, from the office of the chairman down through the daily reports from manufacturing plants, the first item of business is always safety performance. Behind DuPont's commitment to safety is a series of principles and beliefs:

- * Management at every level is responsible for preventing injuries and illnesses.
- * Safety must be a part of every employee's

training. * People are the most important element of a safety and health program.

Advances in Industrial Safety

CRC Press

Published more than ten years ago, the first edition of Accident/Incident Prevention Techniques provided clear, comprehensive guidance on how to mitigate the cost, in personnel and to the bottom line, of accidents/incidents in the workplace. Significantly revised and updated, this Second Edition takes its place as the A to Z hands-on guide to the responsibilities, principles, tools, and

techniques involved in accident investigative planning and preparation. Written by safety expert Charles D. Reese, the book details tried and true techniques that have been used by the occupational safety and health community for many years. It also presents the best theoretical methods to help those responsible for occupational safety develop the best prevention initiative for them and their workforce. Based on the premise that all businesses and industries must face the reality that occupational accidents and illnesses will transpire and the results of these events will have a negative impact on the company's bottom line, the book provides practical examples, easy-to-implement processes, numerous illustrations, and usable forms throughout. See What's New in the Second Edition

Topics such as safety culture and behavior-based safety
Expanded coverage of some topics such as analysis tools and accident investigation
Updated statistical data, sources, and contacts
Updated changes in regulations and compliance
Relevance with current trends and issues in accident prevention
By investigating the

various methods and equipment used in system safety applications, the book covers a myriad of accident/incident prevention techniques and supplies the illustrations and tools that allow readers to begin to develop and build a safety and health program in their workplace. The author draws on his more than 30 years of experience to supply a template for the development of an effective safety and health program.

This book for the GSIS
emphasizes main thematic
areas: manufacturing, services
and user experience. Main
areas of coverage include
Section A: Advanced Production
Management and Production
Control; Section B: Healthcare
Automation; Section C:
Measuring and Modeling Human
Performance; Section D:
Usability and User Experience;
Section E: Safety Management
and Occupational Ergonomics;
Section F: Manufacturing and
Services; Section G: Data and
Probabilistic Information;
Section H: Training and
Collaboration Technologies.
Contributions from especially
early career researchers were
featured as part of this
(virtual) symposium and
celebration. Gavriel Salvendy
initiated the conferences that
run annually as Human-Computer

Interaction International and Applied Human Factors and Ergonomics International (AHFE), both within the Lecture Notes in Springer. The book is inclusive of human-computer interaction and human factors and ergonomics principles, yet it is intended to serve a much wider audience that has interest in automation and human modeling. The emerging need for human-automation interaction expertise has developed from an ever-growing availability and presence of automation in our everyday lives.
