Health-care-associated infections (HAI) -- infections that patients acquire while receiving treatment for other conditions -- are estimated to be 1 of the top 10 causes of death in the nation. This statement summarizes a March 2008 report on this subject which examined: (1) CDC's guidelines for hospitals to reduce or prevent HAIs and what HHS does to promote their implementation; (2) Centers for Medicare and Medicaid Services' (CMS) and hospital accrediting organizations; required standards for hospitals to reduce or prevent HAIs; and (3) HHS programs that collect

data related to HAIs and integration of the data across HHS. Illustrations.

From Policy to Practice World Health Organization
The WHO Guidelines on Hand Hygiene in Health Care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs. The present Guidelines are intended to be implemented in any situation in which health care is delivered either to a patient or to a specific group in a population. Therefore, this concept applies to all settings where health care is permanently or occasionally performed, such as home care by birth attendants. Definitions of health-care settings are proposed in Appendix 1. These Guidelines and the associated WHO Multimodal Hand Hygiene Improvement Strategy and an Implementation Toolkit (<http://www.who.int/gpsc/en/>) are designed to offer health-care facilities in Member States a conceptual framework and practical tools for the application of recommendations in practice at the bedside. While ensuring consistency with the Guidelines recommendations, individual adaptation according to local regulations, settings, needs, and resources is desirable. This extensive review includes in one document sufficient technical information to support training materials and help plan implementation strategies. The document comprises six parts.

Guideline for Isolation Precautions in Hospitals
Mosby
This comprehensive workbook reflects both the recommendations from the CDC Guidelines for Infection Control in Dental Health-Care Settings-2003 and the 2016 Summary of Infection Prevention Practices in Dental Settings: Basic Expectations for Safe Care. Although the CDC guidelines are comprehensive, they describe only what dental health care personnel (DHCP) should do, not how they should do it. This workbook will help you understand and implement the CDC guidelines into practice in your own setting. Each chapter of the workbook contains practical, how-to instructions, charts and checklists, pictures and captions, answers to common questions, and guidance for making sound clinical judgments.

These guidelines provide recommendations that outline the critical aspects of infection prevention and control. The recommendations were developed using the best available evidence and consensus methods by the Infection Control Steering Committee. They have been prioritised as key areas to prevent and control infection in a healthcare facility. It is recognised that the level of risk may differ according to the different types of facility and therefore some recommendations should be justified by risk assessment. When implementing these recommendations all healthcare facilities need to consider the risk of transmission of infection and implement according to their specific setting and circumstances.

With more international contributors than ever before, Block's *Disinfection, Sterilization, and Preservation*, 6th Edition, is the first new edition in nearly 20 years of the definitive technical manual for anyone involved in physical and chemical disinfection and sterilization methods. The book focuses on disease prevention—rather than eradication—and has been thoroughly updated with new information based on recent advances in the field and understanding of the risks, the technologies available, and the regulatory environments.

The Battle Against Infection

Reader's Digest Association
"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- *Patient Safety and Quality: An Evidence-Based Handbook for Nurses*. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nursesshdbk/>
