The creator of Goodnight Goon and The Runaway Mummy pulls from his mad-scientist brain a kid so attracted to slime, muck, dirt, and yuck that he could only be called Icky Ricky. Uh-oh! Icky Ricky is in a mess and has a lot of explaining to do. Why? Well, you see . . . A water demon took over the sink in the boys' bathroom! Icky Ricky and his friends cleaned up the house—with a leaf blower. His sweaty armpit is a perfect robber-proof bank. The dead raccoon he bought at a garage sale is speeding downhill in a runaway go-cart. Can Icky Ricky stop it? Icky Ricky is up to his eyeballs in trouble—and in ick!

Like the adventurer who circled an iceberg to see it on all sides, Mariana Gosnell, former Newsweek reporter and author of Zero Three Bravo, a book about flying a small plane around the United States, explores ice in all its complexity, grandeur, and significance. More brittle than glass, at times stronger than steel, at other times flowing like molasses, ice covers 10 percent of the earth's land and 7 percent of its oceans. In nature it is found in myriad forms, from the delicate needle ice that crunches underfoot in a winter meadow to the massive, centuries-old ice that forms the world's glaciers. Scientists theorize that icy comets delivered to Earth the molecules needed to get life started, and ice ages have shaped much of the land as we know it. Here is the whole world of ice, from the freezing of Pleasant Lake in New Hampshire to the breakup of a Vermont river at the onset of spring, from the frozen Antarctic landscape that emperor penguins inhabit to the cold, watery route bowhead whales take between Arctic ice floes. Mariana Gosnell writes about frostbite and about the recently discovered 5,000-year-old body of a man preserved in an Alpine glacier. She discusses the work of scientists who extract cylinders of Greenland ice to study the history of the earth's climate and try to predict its future. She examines ice in plants, icebergs, icicles, and hail; sea ice and permafrost; ice on Mars and in the rings of Saturn; and several new forms of ice developed in labs. She writes of the many uses humans make of ice, including ice-skating, ice fishing, iceboating, and ice climbing; building ice roads and seeding clouds; making ice castles, ice cubes, and iced desserts. Ice is a

sparkling illumination of the natural phenomenon whose ebbs and flows over time have helped form the world we live in. It is a pleasure to read, and important to read—for its natural science and revelations about ice's influence on our everyday lives, and for what it has to tell us about our environment today and in the future.

The encouragement we crave—when we're most in need Out of the deepest hurts of the human condition, Randy Alcorn brings into clear focus our most pressing questions about evil and suffering—including those that wrench our souls when we or someone we love is victimized by evil or assaulted by disease. He faces these questions with seasoned sensitivity, skillful insight, and a heart of compassion. He dodges none of the difficulties, and never lapses into platitudes, hand-wringing, or oversimplification. On this troubling but inescapable topic, you'll find frank acknowledgment of the inherent limitations that set humanity apart from the God who has none. There's also generous, real encouragement that brings God nearer in our understanding when we need His comfort the most. And amid our heavy doubts and swirling confusion on this topic, Randy Alcorn points us ultimately toward Jesus as "the only answer bigger than the questions."

Annotation Nigeria seems to be behind in a lot of areas North American, European, Australasian and even S.E. Asian librarians will say been there, done that long ago but that does not negate the fact that articles about the experience of placing computers in libraries, automation of processes, use of CD-ROMs, introduction of the Internet and so on are just as valid from people doing it now, today for the first time, as they were from when many of us did it 20 or 30 years ago.

Idiomantics is a unique exploration of the world of idiomatic phrases. The very etymology of the word 'idiom' reveals what's so endlessly fascinating about the wide range of colourful phrases we use in everyday speech: their peculiarity. They're peculiar both in the sense of being particular or unique to the culture from which they originate, and in the sense of being downright odd. To cite three random examples - from American English, Dutch and Italian - what on Earth are a snow job, a monkey sandwich story, and Mr Punch's secret? Fascinating and illuminating, Idiomantics explains all... The ideal gift for word buffs and in fact, anyone who enjoys a good yarn, this playful book looks at 12 groups of idioms around the world, looking at subjects such as fun and games, gastronomic delights and

the daily grind.

If God Is Good: Why Do We Hurt? Simon and Schuster

Ice composition has until now been mostly used for reconstructing the environment of the past. A great research effort is made today to model the climate system in which the ice cover at the earth surface plays a prominent role. To obtain a correct model of the ice sheets, due attention must be paid to the physical processes operating at the interfaces, i. e. the boundary conditions. The idea behind the title of this book is that the study of ice composition can shed some light on the various processes operating at the ice bedrock and ice-ocean interfaces and more generally on glacier dynamics. The book is not intended as a treatise on some specialized topic of glaciology. It is mainly the product of the experience of the two authors gained over several years research on the subject. The two authors are both members of the same university department and personal friends. The book was prepared in the following way. After a first draft of the complete book had been written by the first author, it was put in the hands of the second. The final version sent to the publishers is therefore the result of extended discussion, while at the same time preserving the unity of style that would have been lost had the two authors written selected chapters of the book individually. The book is organized into two distinct parts.

For non-majors/mixed biology courses. Build a flexible non-majors biology course with science literacy at its core. Eric Simon's Biology: The Core combines a succinct, beautifully illustrated 12-chapter textbook with engaging MasteringBiology assignment options and extensive instructor support materials. The Core delivers a uniquely flexible teaching and learning package that supports Active Learning or "Flipped Classroom" teaching techniques, and an emphasis on current issues that relate to basic biological concepts. The modular organization of the text makes it easy for instructors to teach concepts in their preferred order, and powerful online assignment options reinforce those concepts by clarifying the "big picture" and preparing your students with the biological literacy skills required to make informed decisions outside the classroom. The Second Edition text and MasteringBiology assignment options further revolutionize teaching in and out of the classroom with a greater emphasis on the nature of science and dozens of new opportunities for students to practice basic science literacy

skills. The Core's concise modules continue to focus students' attention on the most important concepts, combining dynamic figures and illustrations with supporting narrative as the primary source of instruction to create a more engaging and accessible learning experience for students. The new edition has been revised to strengthen the ways the text, MasteringBiology, and the instructor support materials work together in meeting the needs of both instructors and students-before, during, and after class. Also available with MasteringBiology (tm) MasteringBiology is an online homework, tutorial, and assessment product proven to improve results by helping students quickly master concepts. Students benefit from opportunities to practice basic science literacy skills, using interactive resources that create engaging learning experiences. Effective activities in MasteringBiology help students further visualize and understand complex biological processes. Comprehensive instructor tools include MasteringBiology assignment options. Years ago, Chris Bohjalian and his wife traded their Brooklyn co-op for a century-old Victorian house in Lincoln, Vermont (population 975). Bohjalian, a bestselling novelist, began chronicling life in that gloriously quirky little village with a wide variety of magazine essays and his newspaper column, "Idyll Banter." These pieces, written over the course of twelve years, are honest, funny, and deeply affecting reflections on the unique idiosyncrasies of small-town life (annual outhouse races) and the universal experiences (our hunger for neighborliness) that unite us all.
