Springer Nature

First Published in 2000. This is the fourth edition of a handbook that has already become well-known to many academic staff. Its popularity

rests on the way it presents ideas about teaching and learning underpinned by research findings, but in a form that provides detailed, helpful advice for teachers in higher education. The Handbook could be used to support any of the many training programmes being introduced into colleges and universities around the world, as indeed previous editions have already done. The various chapters focus on the specific skills that are dealt with in such programmes: large-group and small-group teaching, methods of assessment and so on. Manual of Techniques in Invertebrate Pathology, Second Edition, describes a wide range of techniques used in the identification,

isolation, propagation/cultivation, bioassay, quantification, preservation, and storage of the major groups of entomopathogens, including entomophthorales, entomopathogenic fungi, entomopathogenic bacteria of the Bacilli, Nematode parasites, and pathogens and parasites of terrestrial molluscs. The book presents the perspectives of an international group of experts in the fields of invertebrate pathology, including microbiology, mycology, virology, nematology, biological control, and integrated pest management. Organized into 15 chapters, the book covers methods for the study of virtually every major group of entomopathogen, as well as methods for discovery and diagnosis of entomopathogens and the use of complementary methods for microscopy. It discusses the use of molecular techniques for identifying and determining phylogeny, factors that contribute to resistance to entomopathogens, and several other aspects of the science of invertebrate pathology. It also explains initial handling and diagnosis of diseased invertebrates, basic techniques in insect virology, and bioassay of bacterial entomopathogens against insect larvae. In addition, the reader is introduced to the use of bacteria against soil-inhabiting insects and preservation of entomopathogenic fungal cultures.
