Electronically Active Textiles Packt Publishing Ltd
Electronically Active Textiles (e-textiles) are a type of textile material that has some form of electronic functionality. This can be achieved by attaching electronics onto the surface of the textile, incorporating electronic components as part of the fabrication of the textile itself, or by integrating electronics into the yarns or fibers that comprises the textile. The addition of electronic components can give textiles a wide range of new functions from lighting or heating to advanced sensing capabilities. As such, e-textiles have provided a platform for developing a range of new novel products in fields, such as healthcare, sports, protection, transport, and communications. The purpose of this volume is to report on the advances in the integration of electronics into textiles, and presents original research in the field of e-textiles as well as a comprehensive review of the evolution of e-Textiles. Topics include the fabrication and illumination of e-textiles and the use of e-textiles for temperature sensing.

The symposium brought together leading researchers and practitioners from academia, government and industry to discuss intrusion detection research and practice. There were six main sessions presenting full-edged research papers (rootkit prevention, malware detection and prevention, high performance intrusion and evasion, web application testing and evasion, alert correlation and worm detection, and anomaly detection and network traffic analysis), a session of poster presentations and case studies, and two panel discussions (" Government Investments: Successes, Failures and the Future " and " Life after Antivirus - What Does the Future Hold? "). The RAID 2008 Program Committee received 80 paper submissions from all over the world. All submissions were carefully reviewed by at least three independent reviewers on the basis of space, topic, technical assessment, and overall balance. Final selection took place at the Program Committee meeting on May 23rd in Cambridge, MA. Twenty papers were

selected for presentation and publication in the conference proceedings, and four papers were recommended for resubmission as poster presentations. As a new feature this year, the symposium accepted submissions for poster presentations, which have been published as extended abstracts, reporting gear research, demonstration of applications, or case studies. Thirty-nine posters were submitted for a numerical review by an independent, three-person committee of the Program Committee based on novelty, description, and evaluation. The subcommittee chose to recommend the acceptance of 16 of these posters for presentation and publication.
