Study Guide for Medical-Surgical Nursing
Springer Science & Business Media
This book explores in depth the relation between physical activity and cancer

control, including primary prevention, coping with treatments, recovery after treatments, long-term survivorship, secondary prevention, and survival. The first part of the book presents the most recent research on the impact of physical activity in preventing a range of cancers. In the second part, the association between physical activity and cancer survivorship is addressed. The effects of physical activity on supportive care endpoints (e.g., quality of life, fatigue, physical functioning) and disease endpoints (e.g., biomarkers, recurrence, survival) are carefully analyzed. In addition, the determinants of physical activity in cancer survivors are discussed, and behavior change strategies for increasing physical activity in cancer survivors are appraised. The final part of

the book is devoted to special topics, including the relation of physical activity to pediatric cancer survivorship and to palliative cancer care.

02-5053, Cancer Clinical Trials: A Resource Guide for Outreach, Education, and Advocacy, helps individuals and organizations find ways to participate and engage their community in clinical trials outreach and education activities. This publication includes worksheets and a Plan for Action to plan outreach efforts. Whether you are a health care professional who wants to find ways to reach your community, a member of a patient group who wants to educate its members, or someone who want to engage your group or organization to initiate clinical trial outreach activities. This guide is not designed to be a comprehensive overview; rather, it gives some examples of activities others have engaged in, and provides tools and suggestions for implantation in your community. By informing your community about clinical trials, you can help people make informed decisions about their cancer treatment or prevention options, including the option of participation in a clinical trial. The more people

that participate in clinical trials, the faster we can answer the critical research questions that will lead us to better treatment and prevention options for all cancers. This workbook is designed to complement the other materials in the National Cancer Institute Clinical Trials Education Series, described at the beginning of this book.~

This volume provides practicing clinicians and researchers with an update on treatments found to be effective in pediatric psychology as well as those that are emerging in the field and have promise of being proven effective as additional research is conducted. Several chapters contain descriptions of different treatment protocols as well as specific scripts for certain procedures. These materials will be useful to clinicians in their day-to-day practice and clinical researchers in implementing and/or developing research protocols. Leading pediatric

psychology intervention researchers generously provide details of their treatments for a number of pediatric problems. This book provides a means by which treatment manuals and related data on the outcomes of interventions can be disseminated to practicing pediatric psychologists and to investigators. Readers can gain access to treatment protocols developed by leading pediatric psychology researchers at a website specifically developed for this book. Readers may use these manuals in clinical work or contact the manual developers if interested in using/adapting the manuals for research protocols. This website will be updated with additional treatment manuals for problems encountered in the practice of pediatric psychology.

Increasing efficacy of biomedical treatments for cancer means that more and more people are living longer with the disease. The five-year relative survival rate for all cancers has increased considerably in the last three decades, with some survivors living for many years and thus facing increasingly complex psychosocial issues. As a result, the mental health subspecialty of psycho-oncology is growing and is responding to the many calls for increased

availability of psychological services for cancer patients. Psychosocial Care of the Adult Cancer Patient introduces psychologists and other mental health professionals to the field of psycho-oncology, educates them about evidence-based interventions for individuals, groups, couples, and families, and describes how to successfully collaborate with oncologists and other cancer care professionals. Introductory in nature and providing ready access to a range of evidence-based interventions, this book briefs the reader on the field of psycho-oncology and the basics of cancer, explains screening and assessment for psychosocial distress, details the principles of evidence-based interventions, and concludes with case examples that illustrate the evidence-based practice competencies-ask, access, appraise, translate, integrate, and evaluate. In a unique writing style, the case

examples reveal the decision-making process of an experienced clinician doing evidence-based practice. Practical strategies for addressing the psychological needs of cancer patients and their families are offered in an easy-to-use, quick reference format. Key points are highlighted and enhanced through the use of tables and figures designed to summarize and emphasize important information. This book will be of value to clinical and counseling psychologists and other mental health professionals, as well as graduate students in psychology, social work, mental health counseling, oncology nursing, and other cancer care professions.
