In many communities, garbage disposal--solid waste management--is the third largest municipal expenditure and a fast growing budget item. Many small local governments have controlled the growth of these costs by recycling up to 40% of the total solid waste they produce. This guidebook can help communities identify and develop opportunities available through recycling. Chapters cover: (1) recycling as part of an overall community strategy to deal with limited landfill space, rising disposal costs, stricter federal and state regulations, and environmental problems; (2) information gathering and problem assessment to locate the right solutions to solid waste problems; (3) locating buyers and creating a market for recycled materials; (4) making decisions in the design of a recycling program; and (5) educating the public through media coverage, flyers, school programs, and other approaches that encourage household and business participation. Appendices include state government recycling agencies; state recycling associations; a selected bibliography of 24 books, reports, journals, school curricula, and EPA publications; and an outline of financing options. As a homebuyer or seller, if you had the "inside scoop" on the home inspection process, wouldn't that make you feel less anxious? If you're looking to get into this line of work, this book will help you know what to expect and how to get as much information to further your career as well. Think about it like this: the buyers want you to find everything, the sellers don't want you to find anything, the realtors don't want the home inspector to "blow the deal", and the home inspector, who's in the middle, has an obligation to do a thorough and professional job and stay neutral. The home buying process is complicated enough, but being prepared, knowing what to ask, knowing what to look for in a home inspector, knowing what everyone's roles are, that's the easy part when you have access to the right information. If you're going to seek advice from someone, make it someone who's got the extensive background to be offering such advice. Read more so you can be prepared for this house, your next house, or a future career. • Know about your home inspector • Be prepared as a home buyer • Be prepared as a home seller • Be prepared as a realtor • Be prepared as a contractor • Looking into a home inspector career • Home maintenance tips

Architectural Record

It is from the discards of former civilizations that archaeologists have reconstructed most of what we know about the past, and it is through their examination of today's garbage that William Rathje and Cullen Murphy inform us of our present. *Rubbish!* is their witty and erudite investigation into all aspects of the phenomenon of garbage. Rathje and Murphy show what the study of garbage tells us about a population's demographics and buying habits. Along the way, they dispel the common myths about our "garbage crisis"—about fast-food packaging and disposable diapers, about biodegradable garbage and the acceleration of the average family's garbage output. They also suggest methods for dealing with the garbage we do have.
