Pete Jordan, author of the wildly popular Dishwasher: One Man's Quest to Wash Dishes in All Fifty States, is back with a memoir that tells the story of his love affair with Amsterdam, the city of bikes, all the while unfolding an unknown history of the city's cycling, from the craze of the 1890s, through the Nazi occupation, to the bike-centric culture adored by the world today Pete never planned to stay long in Amsterdam, just a semester. But he quickly falls in love with the city and soon his wife, Amy Joy, joins him. Together they explore every inch of their new home on two wheels, their rides a respite from the struggles that come with starting a new life in a new country. Weaving together personal anecdotes and details of the role that cycling has played throughout Dutch history, Pete Jordan's In the City of Bikes: The Story of the Amsterdam Cyclist is a poignant and entertaining read.

The raising of the _Mary Rose_ in 1982 was a remarkable feat of archaeology and her subsequent preservation and display at Portsmouth a triumph of technical skill and imagination. She is more than a relic, however. She has a story to tell, and her sinking in the Solent in 1545, when under attack by the French, and the reasons for it, have intrigued historians for generations. With the benefit of access to her remains, archaeologists have been able to slowly unravel the mystery of her foundering on a calm summer's day in July 1545. This new book by one of the country's leading experts on the _Mary Rose_ contains much that is published for the first time. It has the first full account of the battle in which Henry VIII's warship was sunk, and tells the stories of the English and French admirals. It examines the design and construction of the ship and how she was used, and develops themes begun when he was earlier commissioned by the Mary Rose Trust to write the multi-volume history of the ship. He shows for the first time conclusively that the French fleet arrived unexpectedly to seize the Isle of Wight and

Portsmouth a day later than was once believed, that the many bodies found in the wreck reflect her at action stations, and that the ship had had an extra deck added and was therefore more unstable than was previously thought. Finally, the author makes it clear who was responsible for the loss of the _Mary Rose_, after describing what happened onboard, deck by deck, in her last moments afloat. The fascinating revelation will intrigue the general reader as well as the historian and archaeologist and the book is set to become the last word on the career of this most famous of ships.

The line began forming after eight o'clock. Sal, short and heavy-set, kept everyone busy. Neat, in a white shirt and sports jacket, with his grey fedora cocked to the side, his crooked grin made you smile. Without warning the heavy door would swing open and the waiters would come outside to join him. They were dressed in pajamas or prison garb, with hats and horns, and were there to warm up the crowd. Some in line expected this, others were shocked. The pink polka dot building should have been a warning. Complete strangers in line became chummy, exchanging stories they had heard; toilet seat covers to serve drinks on, microphones in the ladies room, toilet paper for napkins. Most had brought their friends there to be roasted. The line of people varied in age. They all dressed casually because they'd heard you could get a pie in the face or a squirt in the eye. The club's routines were blue in color, but harmless. If you were lucky you might see a "Balls for the Queen" or a "Singing beer." The price was always right for a good time and Warm Beer and Lousy Food was the place to be.

Due to the characteristics of electricity, power markets rank among the most complex markets operated at present. The requirements of an environmentally sustainable, economically efficient, and secure energy supply have resulted in the emergence of several interrelated markets that have to be carefully engineered in order to ensure efficient market outcomes. This book presents an agent-based simulation model that facilitates electricity market research. Simulation outcomes from this model are validated against price data from German power markets. The results significantly contribute to existing research in agent-based simulation and electricity market modeling, and provide insights into the impact of the market structure and market design on electricity prices. The book addresses researchers, lecturers and students who are interested in applying agent-based simulation to power markets. It provides a thorough discussion of the methodology and helpful details for model implementation.
