life storyProvide 36 weeks of instruction based on skill levels rather than grade levelsGuide students by the use of inexpensive manipulatives, including index cards, dried beans, and construction paper! We often tend to compartmentalize when teaching children. In real life, there aren't artificial barriers between "subjects." For example, when you are cooking or baking, you have to use the skills of reading, logical thinking, and measuring, just to name a few. In

driving a car, you see and read road signs, read maps, and count miles. So why do we say to children, "This is math, this is language, this is about science and nature, and this is history"? The most natural and effective means to teach children is through life examples. Content, story, and the ability to show math in real life make a living math book!

The
idiosyncrasies
of human
decision-making
have
confounded
economists and
social theorists
for years. If
each person
makes choices

for personal (and
often irrational)
reasons, how
can people's
choices be
predicted by a
single theory?
How can any
economic, social,
or political
theory be valid?
The truth is,
none of them
really are. Mark
Buchanan makes
the fascinating
argument that
the science of
physics is
beginning to
provide a new
picture of the
human or "social
atom," and help
us understand
the surprising,
and often
predictable,
patterns that
emerge when

they get together. Look at patterns, not people, Buchanan argues, and rules emerge that can explain how movements form, how interest groups operate, and even why ethnic hatred persists. Using similar observations, social physicists can predict whether neighborhoods will integrate, whether stock markets will crash, and whether crime waves will continue or abate. Brimming with mind games and provocative

experiments, *The Social Atom* is an incisive, accessible, and comprehensive argument for a whole new way to look at human social behavior.
