With its more than 2000 entries, this reference work serves as both an introduction to and a summary of the study of ancient Mycenaean civilization. Considerably expanded from the first edition, there are 500 new entries

representing materials published since 1991. The largest part of the book is made up of annotated bibliography entries arranged topically with introductory material for each section. The book also includes a general introduction to Mycenaean civilization, a glossary, and author, place and subject indexes.

Sure to Spark Curiosity and Conversation A surprising number of well-known Bible verses are commonly misused and misunderstood. Whether intentionally or not, people take important verses out of context, and pastor and Bible scholar Eric J. Bargerhuff has seen the effects: confusion, faulty decisions, sin being dismissed, and more. With a deft touch, he helps readers understand and apply sound principles of interpretation and application of twenty familiar verses. This concise high-interest approach appeals to the curious as well as readers concerned about incorrect theology.

The idiosyncrasies of human decision-making have confounded economists and social theorists for years. If each person makes choices for personal (and often irrational) reasons, how can people's choices be predicted by a single theory? How can any economic, social, or political theory be valid? The truth is, none of them really are. Mark Buchanan makes the fascinating argument that the science of physics is beginning to provide a new picture of the human or "social

atom," and help us understand the surprising, and often predictable, patterns that emerge when they get together. Look at patterns, not people, Buchanan argues, and rules emerge that can explain how movements form, how interest groups operate, and even why ethnic hatred persists. Using similar observations, social physicists can predict whether neighborhoods will integrate, whether stock markets will crash, and whether crime waves will continue or abate. Brimming with mind games and provocative experiments, The Social Atom is an incisive, accessible,

and comprehensive argument for a whole new way to look at human social behavior.

Teach math lessons through the creative means of a life story. Provide 36 weeks of instruction based on skill levels rather than grade levels. Guide students by the use of inexpensive manipulatives,

including index cards, dried beans, and construction paper! We often tend to compartmentalize when teaching children. In real life, there aren't artificial barriers between "subjects." For example, when you are cooking or baking, you have to use the skills of reading, logical thinking, and measuring, just to name a few. In driving a car, you see and read road signs, read maps, and count miles. So why do we say to children, "This is

math, this is language, this is about science and nature, and this is history"? The most natural and effective means to teach children is through life examples.
