terminology, 'Micromechatronics' in 1979 for describing the application area of 'piezoelectric actuators', the rapid advances in semiconductor chip technology have led to a new terminology MEMS (micro-electro-mechanical-system) or even NEMS (nano-electro-mechanicalsystem) to describe mainly thin film sensor/actuator devices, a narrower area of micromechatronics coverage. New technologies, product developments and commercialization are providing the necessity of this major revision. In particular, the progresses in high power transducers, loss mechanisms in smart materials, energy harvesting and computer simulations are significant. New technologies, product developments and commercialization are providing the updating requirement for the book contents, in parallel to the deletion of old contents. Various educational/instructional example problems have been accumulated,

which were integrated in the new edition in order to facilitate the self-learning for the students, and the quiz/problem creation for the instructors. Heavily revised topics from the previous edition include: high power transducers, loss mechanisms in smart materials, energy harvesting and computer simulations New technologies, product developments and commercialization helped shape the updated contents of this book where all chapters have been updated and revised. This textbook is intended for graduate students and industrial engineers studying or working in the fields of electronic materials, control system engineering, optical communications, precision machinery, and robotics. The text is designed primarily for a graduate course with the equivalent of thirty 75-minute lectures; however, it is also suitable for self-study by individuals wishing to extend their knowledge in the field.

Securing the Nation's Critical Infrastructures: A Guide for the 2021–2025 Administration is intended to help the United States Executive administration, legislators, and critical infrastructure decision-makers prioritize cybersecurity, combat emerging threats, craft meaningful policy, embrace modernization, and critically evaluate nascent technologies. The book is divided into 18 chapters that are focused on the critical infrastructure sectors identified in the 2013 National Infrastructure Protection Plan (NIPP), election security, and the security of local

and state government. Each chapter features viewpoints from an assortment of former government leaders, C-level executives, academics, and other cybersecurity thought leaders. Major cybersecurity incidents involving public sector systems occur with jarringly frequency; however, instead of rising in vigilant alarm against the threats posed to our vital systems, the nation has become desensitized and demoralized. This publication was developed to deconstruct the normalization of cybersecurity inadequacies in our critical infrastructures and to make the challenge of improving our national security posture less daunting and more manageable. To capture a holistic and comprehensive outlook on each critical infrastructure, each chapter includes a

foreword that introduces the sector and perspective essays from one or more reputable thought-leaders in that space, on topics such as: The State of the Sector (challenges, threats, etc.) Emerging Areas for Innovation Recommendations for the Future (2021–2025) Cybersecurity Landscape ABOUT ICIT The Institute for Critical Infrastructure Technology (ICIT) is the nation’s leading 501(c)3 cybersecurity think tank providing objective, nonpartisan research, advisory, and education to legislative, commercial, and public-sector stakeholders. Its mission is to cultivate a cybersecurity renaissance that will improve the resiliency of our Nation’s 16 critical infrastructure sectors, defend our democratic institutions, and empower generations of cybersecurity leaders. ICIT

programs, research, and initiatives support cybersecurity leaders and practitioners across all 16 critical infrastructure sectors and can be leveraged by anyone seeking to better understand cyber risk including policymakers, academia, and businesses of all sizes that are impacted by digital threats.
