The 20D's inability to provide easy fine-tuning adjustments to WB while shooting is my biggest complaint with the 20D. Canon doesn't seem to understand that WB is a creative tool we use to get great photos and not something we set once in a lab. This is great for use in a studio, but awful for outdoors and nature.

The 20D ignores all the other buttons except the shutter once it goes to sleep a minute after you ignore it. The only way to get the 20D to respond to other keys, like playback or MENU, is to tap the shutter button to wake it up. I don't bother turning it OFF, since it doesn't use the batteries while sleeping.
