For generations, children have loved playing with LINCOLN LOGS building sets and discovering just how inventive they can be. The brainchild of John Lloyd Wright (son of the famous architect), these interlocking logs open up endless possibilities for kids: anything a child can dream up, he or she can build. Plus, every time kids place the logs in position, they're enhancing their manual dexterity. But there is one thing this

wonderful plaything has never had: a detailed manual that explains exactly how to create specific projects. Finally, it's here, complete with an interactive, easy-to-use CD-ROM that lets children (and probably more than a few grownups with fond memories!) go straight to the directions they need. Blueprints lay out every step that goes into constructing a bank, barn, farmhouse, firehouse, frontier tower, multiple cabins, and much more.

The LEGO® Technic Idea Book: Fantastic Contraptions is a collection of hundreds of working examples of simple yet fascinating Technic models that you can build based on their pictures alone. Each project uses color-coded pieces and is photographed from multiple angles, making it easy to see how the models are assembled without the need for step-by-step instructions. Every model

illustrates a different principle, concept, or mechanism that will inspire your own original creations. You're encouraged to use these elements as building blocks to create your own masterpieces. The Technic models in *Fantastic Contraptions* include working catapults, crawling spiders, and bipedal walkers, as well as gadgets powered by fans, propellers, springs, magnets, and vibration. You'll even learn how to add lights, pneumatics, and solar panels to your own models. This visual guide, the third in the three-volume LEGO Technic Idea Book series, is the brainchild of master builder Yoshihito Isogawa of Tokyo, Japan. Each title is filled with photos of Isogawa's unique models, all of which are designed to fire the imaginations of LEGO builders young and old. Imagine. Create. Invent. Now, what will you build? NOTE: The LEGO Technic Idea Book series uses parts from various Technic sets. If you don't have some of the pieces shown in a particular model, experiment by substituting your own parts or visit the author's website for a list of the special parts used in the book.

Shortlisted for The Green Carnation Prize 2014 'This is not a fairytale. This is a story about how sex and money and power police our dreams.' Clear-eyed, witty and irreverent, Laurie Penny is as ruthless in her dissection of modern feminism and class politics as she is in discussing her own experiences in journalism, activism and underground culture. This is a book about poverty and prejudice, online dating and eating disorders, riots in the streets and lies on the television. The backlash is on against sexual freedom for men and women and social justice – and feminism needs to get braver. Penny speaks for a new feminism that takes no prisoners, a feminism that is about justice and equality, but also about freedom for all. It's about the

freedom to be who we are, to love who we choose, to invent new gender roles, and to speak out fiercely against those who would deny us those rights. It is a book that gives the silenced a voice – a voice that speaks of unspeakable things.

As a serial entrepreneur, Kevin Kruse has seen time and again that the leadership practices that actually work are the opposite of what is commonly taught and implemented. Close Your Open Door Policy shows how a contrarian approach can be a better, faster, and easier way to succeed as a leader. Chapter by chapter, Kruse focuses on a piece of popular wisdom, then shows with real-world case studies and quantitative research that the opposite approach will lead to better results, encouraging leaders to play favorites, stay out of meetings, and, of course, close their open doors.

Computer Literacy: Issues and Directions for 1985 is based on a conference entitled "National Goals for Computer Literacy in 1985", held in Reston, Virginia, on December 18-20, 1980, under the auspices of the National Science Foundation. The conference provided a forum for discussing views on computer literacy, as well as methods for infusion of computer-related objectives and activities into existing curricula for different age levels. Issues and barriers to developing national goals for achieving a computer-literate society in the United States are also examined. Comprised

of 31 chapters, this book begins by presenting four major approaches to a perspective on computer literacy: impact of computer literacy on the citizenry; major national components of a computer literacy program; development of an information handling curriculum for an evolving computer literacy concept; and a 30-year historical overview of "computer events in three strands" (research/development/technology, education, and social/political institutional). The next section considers the definitions and requirements of computer literacy as they impact society, students, and teachers. The use of the computer in cognitive research and in problem solving is also discussed, together with curriculum development in computer literacy. This monograph will be of interest to students, teachers, school administrators, and educational policymakers.

What is Vintage Innovation? Vintage Innovation redefines innovation not as "new and flashy" but as "better and different." It isn't a rejection of new approaches or cutting-edge technology so much as an embrace of the old and the new. It's the overlap of the "tried and true" and the "never tried." It's a mash-up of low-fi tech and new tech. It's the idea of finding relevance by looking back and looking forward. It's a focus on timeless skills in new contexts. It's the idea that innovation happens when teachers take a both/and approach as they empower their students in the present to prepare them for an uncertain future. If you are a teacher, you are an innovator. You are the experimenter trying new strategies. You are the architect designing new learning opportunities. Apps change. Gadgets break. Technology grows obsolete. But one thing remains: teachers change the world. And one way to do this is through a vintage innovation approach. With vintage innovation,

teachers ask: How do I innovate when I don't have the best technology? How can I use vintage tools, ideas, and approaches in new ways? How can I use constraints to spark creativity? How do I blend together the "tried and true" with the "never tried?"
