A respected resource for decades, the Guide for the Care and Use of Laboratory Animals has been updated by a committee of experts, taking into consideration input from the scientific and laboratory animal communities and the public at large. The Guide incorporates new scientific information on common laboratory animals, including aquatic species, and includes extensive references. It is organized around major components of animal use: Key concepts of animal care and use. The Guide sets the framework for the humane care and use of laboratory animals. Animal care and use program. The Guide discusses the concept of a broad Program of Animal Care and Use, including roles and responsibilities of the Institutional Official, Attending Veterinarian and the Institutional Animal Care and Use Committee. Animal environment, husbandry, and management. A chapter on this topic is now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment, husbandry, behavioral and population management, and more. Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. The Guide identifies design issues, providing construction guidelines for functional areas; considerations such as drainage, vibration and noise control, and environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.

This proceedings volume brings together the invited papers from the Respiratory Biomechanics Symposium of the First World Congress of Biomechanics held in La Jolla, California from August 3D-September 4, 1990. The respiratory system offers many opportunities to apply the different branches of traditional mechanics. Tissue defonnations and stresses during lung expansion can be analyzed using the principles of solid mechanics. Fluid mechanical problems in the lung are unique. There is the matched distribution of two fluids, gas and blood, in two beautifully intertwined, branched conduit systems. The reversing flow of the gas phase presents different problems than the pulsatile flow of the non-Newtonian fluid that is the blood. On the smaller scale, there is the flux of fluids and solutes across the capillary membrane. Finally, there is the problem of coupling fluid and solid mechanics to understand the overall behavior of the respiratory system. In this symposium, we have chosen to address the basic processes that contribute to the gas and fluid exchange functions of the lung. Section 1, Lung Tissue Mechanics, provides an historical background and, then, presents more recent work on the structure of the lung parenchyma, the mechanics of the tissue, and the effects of the bounding membrane, the visceral pleura. This work provides, in a single volume, up-to-date knowledge about every aspect of varicella zoster virus, herpes zoster and postherpetic neuralgia. The first edition of this book, published in 1993, received wide acclaim. In this new edition, Dr. Watson and Dr. Gershon are joined by outstanding authorities on the multiple facets of these diseases. This book encompasses the impressive amount of knowledge which has been accumulated in recent years and enriches the knowledge not only about this particular syndrome but about chronic pain in general. It is a valuable contribution to the literature on pain which deals with all the basic scientific information on the acute and chronic stages of herpes zoster as well as the recent exciting developments in the treatment of this affliction.

Seeing the Myth in Human Rights explores the role of myth in the creation and propagation of the 1948 Universal Declaration of Human Rights. Drawing on records, publications, and speeches from the Declaration's creators as well as current scholarship on human rights, Jenna Reinbold sees the Declaration as an exemplar of modern mythmaking.

Intracranial atherosclerosis is the dominant cause of stroke in over 70% of the world's population. Globalization is leading to an increasingly heterogeneous society everywhere. Advances in imaging technology allow this previously inaccessible pathology to be clinically

studied. Edited by internationally renowned clinicians, Intracranial Atherosclerosis is the first book to examine intracranial causes of stroke. Clinical practice is allied with basic science to guide all those with an interest in stroke on the diagnosis and management of intracranial atherosclerosis.

Personal life narratives can serve as a rich source of new insights into the experience of human aging. In this comprehensive volume, an international team of editors and contributors provide effective approaches to using biography to enhance our understanding of adult development. In addition to providing new theoretical aspects on aging and biography, the book also details new developments concerning the practical use of different biographical approaches in both research and clinical work. This is a landmark volume advancing the use of narrative approaches in gerontology.

Education in the health professions is placing greater emphasis on "active" learning—learning that requires applying knowledge to authentic problems; and that teaches students to engage in the kind of collaboration that is expected in today's clinical practice. Team-Based Learning (TBL) is a strategy that accomplishes these goals. It transforms passive, lecture-based coursework into an environment that promotes more self-directed learning and teamwork, and makes the classroom come "alive." This book is an introduction to TBL for health profession educators. It outlines the theory, structure, and process of TBL, explains how TBL promotes problem solving and critical thinking skills, aligns with the goals of science and health courses, improves knowledge retention and application, and develops students as professional practitioners. The book provides readers with models and guidance on everything they need to know about team formation and maintenance; peer feedback and evaluation processes, and facilitation; and includes a directory of tools and resources. The book includes chapters in which instructors describe how they apply TBL in their courses. The examples range across undergraduate science courses, basic and clinical sciences courses in medical, sports medicine and nursing education, residencies, and graduate nursing programs. The book concludes with a review and critique of the current scholarship on TBL in the health professions, and charts the needs for future research.

In our society's aggressive pursuit of cures for cancer, we have neglected symptom control and comfort care. Less than one percent of the National Cancer Institute's budget is spent on any aspect of palliative care research or education, despite the half million people who die of cancer each year and the larger number living with cancer and its symptoms. Improving Palliative Care for Cancer examines the barriers to scientific, policy, and social action that keep those in need from getting good palliative care. It goes on to recommend public- and private-sector actions that would lead to the development of more effective palliative interventions; better information about currently used interventions; and greater knowledge about, and access to, palliative care for all those with cancer who would benefit from it.

Discourse markers - the particles oh, well, now, then, you know and I mean, and the connectives so, because, and, but and or - perform important functions in conversation. Dr Schiffrin's approach is firmly interdisciplinary, within linguistics and sociology, and her rigorous analysis clearly demonstrates that neither the markers, nor the discourse within which they function, can be understood from one point of view alone, but only as an integration of structural, semantic, pragmatic, and social factors. The core of the book is a comparative analysis of markers within conversational discourse collected by Dr Schiffrin during sociolinguistic fieldwork. The study concludes that markers provide contextual coordinates which aid in the production and interpretation of coherent conversation at both local and global levels of organization. It raises a wide range of theoretical and methodological issues important to discourse analysis - including the relationship between meaning and use, the role of qualitative and quantitative analyses - and the insights it offers will be of particular value to readers confronting the very substantial problems presented by the search for a model of discourse which is based on what people actually say, mean, and do with words in everyday social interaction.
