Social policy shapes the daily lives of every Canadian citizen and should reflect the beliefs of a majority of Canadians on just approaches to the promotion of health, safety, and well-being. Too often, those on the front lines—social workers, nurses, and teachers—observe that policies do not work well for the most vulnerable groups in society. In the first part of this new edition of Canadian Social Policy, Westhues and Wharf argue that service deliverers have discretion in how policies are implemented, and the exercise of this discretion is how citizens experience policy—whether or not it is fair and reasonable. They show the reader how social policy is made and they encourage active citizenship to produce policies that are more socially just. New material includes an examination of the reproduction of systemic racism through the implementation of human rights policy and a comparative analysis of the policy-making process in Quebec and English Canada. The second part of the book discusses policy issues currently under debate in Canada. Included are new chapters that explore parental leave policies and housing as a determinant of health. All chapters contain newly updated statistical data and research and policy analysis. A reworked section on the process of policy-making and the addition of questions for critical reflection enhance the suitability of the book as a core resource in social policy courses. The final chapter explores how front-line workers in the human services can advocate for change in organizational policies that will benefit the people supported.

From one of the world ' s leading medical journals comes the definitive evidence-based, full-color guide to end-of-life and palliative care "...represents an important milestone in the evolution of care for people with advanced disease—for which its editors and authors and JAMA should be rightly proud. It is wonderful that JAMA had the foresight to publish a series on this topic, which, as medicine has become more technologically advanced and subspecialized, is often overlooked and, sometimes worse, avoided....this book will be invaluable for front-line clinicians, and indeed all health care practitioners—as care at the close of life is a part of almost all of medicine ' s specialties and settings."--Irene J. Higginson, BMBS, PhD, FPPHM, FRCP; Dept. of Palliative Care, Policy, & Rehabilitation; Cicely Saunders Institute; King's College London (from the foreword) A new addition to the JAMAevidence series, Care at the Close of Life: Evidence and Experience offers evidence-based and clinical expert guidance on caring for patients with life-limiting illness, incorporating the words and perspectives of affected patients, their families, and treating clinicians. Organized by these actual clinical cases, the book is based on the acclaimed 7-year series of 42 articles, originally published in JAMA as " Perspectives on Care at the Close of Life, " and now thoroughly updated as chapters and featuring extensive never-before-published material. Care at the Close of Life covers a wide range of clinical syndromes, disease processes, communication challenges, health-care delivery settings, and issues faced by patients, including withdrawal of dialysis and other life-sustaining measures, cross-cultural approaches, and the role of chemotherapy. Throughout the book, emphasis is on the principles of palliative care, with the patient and family at the center of care, and with attention given to all problems—physical, psychological, social, and spiritual. Reflecting this focus, each chapter begins with a patient case study to introduce the clinical problem, followed by " perspectives " that draw on extensive, real-world dialogue between clinicians, patients, and families. Internationally renowned authors then review the typical challenges illustrated by the case, offering state-of-the-art, evidence-based assessment and treatment approaches. Modern Methods in Protein Nutrition and Metabolism grew out of a series of seminars (Modern Views in Nutrition) held in 1989 at Iowa State University. These seminars and this book were financed primarily through the Wise and Helen Burroughs Lectureship endowment generously established by the late Dr. Wise Burroughs and his wife Helen. This book comprises 12 chapters, and begins with a focus on amino acid analysis in food and physiological samples. Succeeding chapters go on to discuss concepts and techniques on nitrogen balance; determination of the amino acid

requirements of animals; and novel methods for determining protein and amino acid digestibilities in feedstuffs. Other chapters cover measurement of protein digestion in ruminants; evaluation of protein status in humans; surgical models to measure organ amino acid metabolism in vivo; and measurement of whole-body protein content in vivo. The remaining chapters discuss estimation of protein synthesis and proteolysis in vitro; isotopic estimation of protein synthesis and proteolysis in vivo; n-glycine as a tracer to study protein metabolism in vivo; and mathematical models of protein metabolism. This book will be of interest to practitioners in the fields of human nutrition and medicine.

In the past five years, the techniques used in arthroscopic shoulder surgery have advanced exponentially. The basic principles are the same, but the theories, techniques, and instrumentation have dramatically improved. The Cowboy's Companion: A Trail Guide for the Arthroscopic Shoulder Surgeon is truly a companion book to Burkhart 's View of the Shoulder: A Cowboy's Guide to Advanced Shoulder Arthroscopy, which builds on the principles of the first book and concentrates on the new theories and techniques that have developed since the first book was written. The book is separated into two sections: The Shoulder Roundup, which will be an update on the techniques and ideas that have developed in shoulder surgery and The Shoulder Rodeo, which will be a collection of challenging cases that demonstrate unique approaches to difficult shoulder problems. The text comes with two DVDs that feature advanced interactive technology. The surgical videos will be supplemented with state-of-the-art digitally enhanced illustrations and animations, to create an entirely new 3-dimensional learning environment for the surgeon.
