NCLEX-RN Review Made Incredibly Easy Lippincott Williams & Wilkins The new edition of Bruce Wingerd's *The Human Body: Concepts of Anatomy and Physiology* helps encourage learning through concept building, and is truly written with the student in mind. Learning Concepts divide each chapter into easily absorbed subunits of information, making learning more achievable. Since students in a one-semester course may have little experience with biological and chemical concepts, giving them tools such as "concept statements," "concept check" questions, and a

"concept block study sheet" at the end of each chapter help them relate complex ideas to simple everyday events. The book also has a companion Student Notebook and Study Guide (available separately) that reinvents the traditional study guide by giving students a tool to help grasp information in class and then reinforce learning outside of class.

Although a very fragile structure, the skin barrier is probably one of the most important organs of the body. Inward/out it is responsible for body integrity and outward/in for keeping microbes, chemicals, and allergens

from penetrating the skin. Since the role of barrier integrity in atopic dermatitis and the relationship to filaggrin mutations was discovered a decade ago, research focus has been on the skin barrier, and numerous new publications have become available. This book is an interdisciplinary update offering a wide range of information on the subject. It covers new basic research on skin markers, including results on filaggrin and on methods for the assessment of the barrier function. Biological variation and aspects of skin barrier function restoration are discussed as well. Further sections are dedicated to clinical implications of skin barrier integrity, factors influencing the penetration of the skin, influence of wet work, and guidance for prevention and saving the barrier. Distinguished researchers have contributed to this book, providing a comprehensive and thorough overview of the skin barrier function. Researchers in the field, dermatologists, occupational physicians, and related industry will find this publication an essential source of information.
