In America, a new franchise outlet opens every eight

minutes-a rate that is accelerating both here and worldwide-yet to date, no publication has provided more than a cursory glimpse into the owners' experiences. The Franchise Ratings Guide is a deeper examination, revealing an industry in which

deceit is common and a full 30% of franchise owners regret their purchase. The Franchise Ratings Guide provides essential and thorough advice on pre-purchase steps, in-depth, actual owner insight from more than 3,000 franchise owners, and reference data on each company surveyed, including contact, investment, and royalty information. It's got all the information you need to make an informed investment decision.

This book reports on research and developments in human-technology interaction. A special emphasis is given to human-computer interaction, and its implementation for a wide range of purposes such as healthcare, aerospace, telecommunication, and education, among others. The human aspects are analyzed in detail. Timely studies on human-centered design, wearable technologies, social and affective computing, augmented, virtual and mixed reality simulation, human rehabilitation and biomechanics represent the core of the book. Emerging technology applications in

business, security, and infrastructure are also critically examined, thus offering a timely, scientifically-grounded, but also professionally-oriented snapshot of the current state of the field. The book is based on contributions presented at the 3rd International Conference on Human Interaction and Emerging Technologies: Future Applications, IHJET 2020, held on August 27-29, 2020. It offers a timely survey and a practice-oriented reference guide to researchers and professionals dealing with design and/or management of the new generation of service systems.

Understanding the Dollar Crisis Routledge

Committee Serial No. 17.

[pt.1]: Considers the following related bills. H.R. 1900 and identical H.R. 2156,

to strengthen the criminal laws relating to bribery, graft, and conflict of interest in the Federal Government. H.R. 2157, the Government Ethics Act of 1959, to provide for administrative penalties, such as suspension or discharge, for Federal employees who engage in unethical conduct. H.R. 7556, to prohibit a company doing business with the Federal Government from hiring any Federal employee with which that company dealt within two years following the termination of his Federal employment. H.R. 10575, to consolidate the existing conflict of interest laws into one unified Act, with a common set of definitions and criminal penalties. pt. 2: Includes Justice Dept Office of Legal Counsel memorandum "Conflict of Interest Statutes," Dec. 10, 1958 (p. 619-755).

The Monthly Cyclopædia of Practical Medicine. V.1-21, V.22, No. 1-5, Aug. 1887-Apr. 1908 Ludwig von Mises Institute
In Autnorama: The Illusory Promise of High-Tech Driving, historian Peter Norton argues that driverless cars cannot be the safe, sustainable, and inclusive "mobility solutions" that tech companies and automakers are promising us. The salesmanship behind the "driverless future" is distracting us from better ways to get around that we can implement now. Unlike autonomous vehicles, these alternatives are inexpensive, safe, sustainable, and inclusive. Norton takes the reader on an engaging ride--from the GM Futurama exhibit to "smart" highways and vehicles--to show how we are once again being sold car dependency in the guise of mobility. Autnorama is hopeful,

advocating for wise, proven, humane mobility that we can invest in now, without waiting for technology that is forever just out of reach. Signal diplom.de
The first volume of the Eurasian Studies in Business and Economics, the official proceedings series of the Eurasia Business and Economics Society (EBES), includes selected papers from the 13th EBES Conference held in Istanbul in 2014. This volume covers theoretical and empirical contributions in the areas of innovation, entrepreneurship, HR, banking and finance. An eclectic set of methodologies and contributions from experts across the World makes this volume a valued work of reference. This volume also provides a timely

opportunity to colleagues, professionals and students to catch up with the most recent studies in different fields and empirical findings on many countries and regions.

The 1991 Economic Report of the President

Mariner Books

In an election year in which everyone seems to be looking for change, Tom Cronin reminds us that it is important to look back at presidential precedents and pitfalls, carrying forward these lessons as we look ahead in the "search for the perfect president." America has never had a perfect president, nor are we likely to. We yearn for qualities of mind,

character, and experience that are rarely found in one person. Candidates always have the flaws associated with being human. Noted presidential scholar Thomas E. Cronin helps us consider these realities with clarity and empathy, as one who has both written about presidents and run for office himself. Cronin unabashedly issues three cheers for those who run, and for all their helpers and advisers who provide us choices. In this election year, incredible diversity and therefore sharp disagreements of ideology and values prevail. Cronin puts all this in context with the

history of the American presidency from George Washington to George W. Bush with a special focus on what he calls the "Act III" presidency of JFK. He takes us from the fiction of "searching for the perfect president" to the facts of the presidency in the post-9/11 world. Whether the next president is soldier, shaman, or somewhere in-between, Cronin gives us a glimpse of presidents future through the lens of presidents past.

Smart city development has emerged a major

issue over the past 5 years. Since the launch of IBM ' s Smart Planet and CISCO ' s Smart Cities and Communities programmes, their potential to deliver on global sustainable development targets have captured the public ' s attention. However, despite this growing interest in the development of smart cities, little has as yet been published that either sets out the state-of-the-art, or which offers a less than subjective, arm ' s length and dispassionate account of their potential contribution. This book brings together cutting edge research and the findings from technical development projects from leading authorities within the field to capture the transition to smart

cities. It explores what is understood about smart cities, playing particular attention on the governance, modelling and analysis of the transition that smart cities seek to represent. In paving the way for such a representation, the book begins to account for the social capital of smart communities and begins the task of modelling their embedded intelligence through an analysis of what the "embedded intelligence of smart cities" contributes to the sustainability of urban development. This innovative book offers an interdisciplinary perspective and shall be of interest to researchers, policy analysts and technical experts involved in and responsible for the

planning, development and design of smart cities. It will also be of particular value to final year undergraduate and postgraduate students interested in Geography, Architecture and Planning. Human Interaction, Emerging Technologies and Future Applications III Island Press

This new addition to the Model Jury Instructions series provides clear and balanced instructions for presentation to juries in employment litigation. These models accurately and impartially present the elements and critical definitions of patent law in language that is understandable and

familiar to the average juror. The instructions allow for easy adaptation to particular cases or points. A CD-ROM of the jury instructions is included with the book.

Abstract: Artificial

intelligence has already been applied to many areas since its official birth in 1956, but most of the applications ended up in great disappointments as the benefits they reaped were very low. Due to this reason the vast interest in applying this relatively young technology to business calmed down in the late seventies when scientists recognized that the current intelligent systems were not yet plug-and-play solutions, hence mature enough to fully meet the business needs and requirements at that time. However, the limited commercial applicability of artificial intelligence in the past has to be rethought today as with the significant progress in artificial intelligence research and the growth of electronic commerce conducted over the World Wide Web new opportunities for business applications of artificial

intelligence have emerged consequently. Nowadays horizontal and vertical electronic commerce is significantly driven by intelligent applications. Their employment in electronic businesses may well generate huge returns on investments, providing a technology-based response to increasing competition, the volatility of business models, and the pace of technology change . Despite the wide assumption that artificial intelligence will have a major impact on Internet-related businesses today and especially in the next years to come, it is uncertain to what extent it performs and will perform that way. The purpose of this thesis is to analyse, assess and evaluate the potential of commercial applications of artificial intelligence in electronic businesses. Therefore the main research question of this paper is whether

artificial intelligence is reasonably applicable in Internet-related businesses, first in terms of effectiveness and second in terms of efficiency. In the assessment the application of artificial intelligence in electronic businesses is represented by the employment of intelligent agents. In harmony with the major research question emphasized above, the paper provides a thorough discussion about the economic impact of the most common and relevant application types of intelligent agents on electronic commerce environments. In addition the driving underlying technologies of intelligent agents are analysed with respect to artificial intelligence techniques and methods, and current standardisation efforts. [...]
