Offering essential, evidence-based practice guidelines specifically for the critical care setting, ICU Quick Drug Guide contains up-to-date information in a quick-access format. This portable handbook provides fast, accurate drug therapy information needed at the point of care, including expert advice throughout to help clinicians determine optimal pharmacological therapy. Offers a quick summary of current clinical guidelines to experienced clinicians while providing a simplified, focused guide to all entry level clinicians. Covers the wide variety of issues seen in the ICU, including sepsis and septic shock, venous thromboembolism, acute heart failure, anaphylaxis, arrhythmias, asthma and COPD, pain, infections, pancreatitis and liver failure, stroke, and many more. Begins each topic with a brief discussion of the disease state followed by drug tables that compare and contrast different treatment regimens, including pharmacokinetics, pharmacodynamics, drug interactions, contraindications, and hepatic/renal dosing. Contains clinical pearls organized by the top disease states seen in the critical/acute care setting. Provides practical and essential drug information from Dr. Jennifer Pai Lee, a clinical pharmacist with expertise in critical care and pharmacokinetics/pharmacodynamics.

Intensive care patients are the most critically ill in any hospital and they are a patient group that utilises a disproportionate amount of medical resources. Intensive care medicine, around for about 40 years, is a relatively recent but globally expanding specialty due to a growing geriatric population of discerning demand for health system. The older generation of intensivists are approaching retirement. The middle generation is trained in various medical specialties and then subspecialised in intensive care. These doctors now lead the way in clinical practice, research, management and training. On the other hand, the younger generation of intensivists includes an ever increasing number of doctors who, for the first time, enjoy a structured training program with clinical rotations, courses, and exam qualifications. Written by

outstanding specialist practitioners who are also internationally acclaimed authors from the UK and North America, this is an authoritative guide to practical intensive care medicine. The clinical contents of the book share a practical and educational common thread with each chapter addressing pertinent clinical challenges comprehensively. This invaluable book is specially targeted at medical students, trainees in intensive care medicine and other acute specialties, consultants wishing to remain up to date on all branches of this vast specialty and other allied professionals practicing in intensive care including nurses and physiotherapists. Nine years have passed since the first edition of Care of the Critically Ill Patient was published. As its editors Maurice Rapin and I were fortified by the many positive and helpful comments of reviewers and readers: the work appeared to have fulfilled our original aims and objectives. Intensive care medicine has, of course, advanced and changed in many ways since 1982 and it therefore seemed appropriate to consider the preparation of a second edition. Encouraged by the reception of the first and the timely prompting of the publishers we began, in 1986, to prepare for a new edition. Caring for critically ill patients is of universal concern and we were therefore delighted when Warren Zapol joined us as C'n editor widening our international base. The three of us subsequently spent many happy and productive times together planning the content, priorities, scale and contributions for the new edition. A great tragedy then overcame us: Maurice Rapin died suddenly. His death deprived us of a true friend and colleague who had been an international pioneer during the development of intensive care medicine. I will always remember, with affection and professional pride, the many hours he and I worked together in preparing the first edition of this book and also as founding editors of the now firmly established journal Intensive Care Medicine. An obituary, written by Warren Zapol, that appeared in the journal follows the Preface.

The two previous editions of Applied Physiology in Intensive Care Medicine proved extremely successful, and the book has now been revised and split into two volumes to enhance ease of use. In this second volume some of the most renowned experts in the field offer detailed reviews on measurement techniques and physiological processes of crucial importance in intensive care medicine. Throughout, a key aim is to help overcome the fundamental unevenness in clinicians' understanding of applied physiology, which can lead to suboptimal treatment decisions. Applied Physiology in Intensive Care has been written by some of the most renowned experts in the field and provides an up-to-date compendium of practical bedside knowledge essential to the effective delivery of acute care medicine. It will serve the clinician as an invaluable reference source on key issues regularly confronted in everyday practice.

The two previous editions of Applied Physiology in Intensive Care Medicine proved extremely successful, and the book has now been revised and split into two volumes to enhance ease of use. This first volume comprises three elements -- "physiological notes," "technical notes," and seminal studies. The physiological notes concisely and clearly capture the essence of the physiological perspectives underpinning our understanding of disease and response to therapy. The technical notes then succinctly explain some of the basics of "how to" in this technology-centered field of critical care medicine. Finally, a number of seminal studies are provided on diverse topics in intensive care. Applied Physiology in Intensive Care, written by some of the most renowned experts in the field, is an up-to-date compendium of practical bedside knowledge that will serve the clinician as an invaluable reference source on key issues regularly confronted in everyday practice.

Guiding FFICM and EDIC exam candidates through the intensive care medicine curriculum, this book provides 48 case studies mapped to eight key areas of study in the UK and European syllabuses. Cases include clinical vignettes, explanations and a list of key learning points, while also being formatted along the structure of FICM case reports. Key clinical management points are identified and linked to appropriate scientific or evidence-based research and case studies chosen reflect a general population relevant to a worldwide readership. Conditions covered are significant to large areas of clinical practice as well as more discrete specialist knowledge, making this an essential study guide for trainees preparing for exams in intensive care medicine and also a useful learning tool for candidates in related disciplines such as anaesthesia (FRCA), emergency medicine (MCEM) and surgery (MRCS).

This text is aimed at defining the current concepts that define trauma induced coagulopathy by critically analyzing the most up-to-date studies from a clinical and basic science perspective. It will serve as a reference source for any clinician interested in reviewing the pathophysiology, diagnosis, and management of the coagulopathic trauma patient, and the data that supports it. By meticulously describing the methodology of most traditional as well as state of the art coagulation assays the reader will have full understanding of the tests that are used to study trauma induced coagulopathy. The evolving use of blood products as well as recently introduced hemostatic medications are reviewed in detail. Trauma Induced Coagulopathy will also be a valuable source for quick reference to the clinician that is faced with specific clinical challenges when managing coagulopathy.

Revision Notes in Intensive Care Medicine is a key resource for candidates preparing for postgraduate intensive care examinations. Mapped to the FFICM, EDIC and FCICM syllabuses, this title ensures candidates have all the information needed to prepare for their examinations. Information is presented in concise note form and bullet points with visually memorable tools, such as tables and diagrams, making revising and retaining key facts easier. Chapters are arranged into physiological systems, such as 'Respiratory Intensive Care' and 'Obstetric Intensive Care', and are subdivided into major clinical issues within each chapter so specific areas of further study can be found easily. Drawing from the authors' experiences as successful candidates, and carefully reviewed by consultants, Revision Notes in Intensive Care Medicine provides the foundation for postgraduate intensive care exam revision.
