How maturing digital media and network technologies are transforming place, culture, politics, and
infrastructure in our everyday life. Digital media and network technologies are now part of everyday life.
The Internet has become the backbone of communication, commerce, and media; the ubiquitous mobile
phone connects us with others as it removes us from any stable sense of location. Networked Publics
examines the ways that the social and cultural shifts created by these technologies have transformed our
relationships to (and definitions of) place, culture, politics, and infrastructure. Four chapters—each by an
interdisciplinary team of scholars using collaborative software—provide a synoptic overview along with
illustrative case studies. The chapter on place describes how digital networks enable us to be present in
physical and networked places simultaneously—often at the expense of nondigital commitments. The
chapter on culture explores the growth and impact of amateur-produced and remixed content online.
The chapter on politics examines the new networked modes of bottom-up political expression and
mobilization. And finally, the chapter on infrastructure notes the tension between openness and control
in the flow of information, as seen in the current controversy over net neutrality.
