Authoritative, thorough, and engaging, *Life: The Science of Biology* achieves an optimal balance of scholarship and teachability, never losing sight of either the science or the student. The first introductory text to present biological concepts through the research that revealed them, *Life* covers the full range of topics with an integrated experimental focus that flows naturally from the narrative. This approach helps to bring the drama of classic and cutting-edge research to the classroom - but always in the context of reinforcing core ideas and the innovative scientific thinking behind them. Students will experience biology not just as a litany of facts or a highlight reel of experiments, but as a rich, coherent discipline.

RFID in the Supply Chain Prentice Hall
In the realm of health care, privacy protections are needed to preserve patients' dignity and prevent possible harms. Ten years ago, to address these concerns as well as set guidelines for ethical health research, Congress called for a set of federal standards now known as the HIPAA Privacy Rule. In its 2009 report, *Beyond the HIPAA Privacy Rule: Enhancing Privacy, Improving Health Through Research*, the Institute of Medicine's Committee on Health Research and the Privacy of Health Information concludes that the HIPAA Privacy Rule does not protect privacy as well as it should, and that it impedes important health research.

Device Therapy in Heart Failure Springer
This clinical casebook is comprised of surgical cases involving the most important

cardiovascular diseases in a concise, easy-to-read format (5x8 in trim size, like other titles in this burgeoning, informal product line in the Springer clinical medicine program). Each chapter is a case that opens with a unique clinical presentation, followed by a description of the diagnosis, assessment and management techniques used to treat it, as well as questions and answers (between 8 and 10) about relevant aspects related to the diagnosis and treatment of the addressed disease. The Q&A section will broaden discussion and increase the title's pedagogical value. The casebook features 40 surgical cases in the following thematic areas: Aortic Disease, Arrhythmias, Cardiac Tumors, Coronary Insufficiency, Congenital Heart Disease, Endovascular Therapies, Heart Failure, Heart Transplantation, Mechanical Circulatory Support, Pericardial Disease, Pulmonary Embolism and Valvular Heart Disease. This book will be prepared by the Brazilian Department for Academic Leagues of Cardiovascular Surgery, within the Brazilian Society of Cardiovascular Surgery (BSCVS). This department is the section within BSCVS that consists of the academic leagues of cardiovascular surgery from each university throughout the country. In Brazil, medical academic leagues are organizations that gathers students, interns and residents to discuss a certain topic and promote research and teaching-oriented extra-class activities, supervised by a group of professors. Thus trainees will have involvement in writing the chapters and the senior professor supervisors will edit and finalize the work. Basically, each chapter is written by an intern or resident and, ultimately, his/her supervisor. As the books volume editors, doctors Almeida and Jatene will have final responsibility for the cases and overall manuscript.

This book covers competing risks and multistate models, sometimes summarized as event history analysis. These models generalize the analysis of time to a single event (survival analysis) to analysing the timing of distinct terminal events (competing risks) and possible intermediate events (multistate models). Both R and multistate methods are promoted with a focus on nonparametric methods.

Giving organizations the ability to track, secure, and manage items from the time they are raw materials through the life-cycle

of the product, radio frequency identification (RFID) makes internal processes more efficient and improves overall supply chain responsiveness. Helping you bring your organization into the future, *RFID in the Supply Chain: A Guide to Selection and Implementation* explains RFID technology, its applications in SCM, data storage and retrieval, business processes, operational and implementation problems, risks, security and privacy, facility layout, handling systems and methods, and transportation costs. In short, with its soup-to-nuts coverage, the book ensures that your RFID implementation is successful and that you get the most from your investment. The book discusses the major paradigm shift in product traceability that began with transitioning to RFID technology from bar code technology. It examines the economic feasibility of rolling out RFID and the challenges in supply chain synchronization, customer privacy, security, operations and IT, logistics, program management, education and training, and implementation, as well as what lessons have been learned. The author addresses the RFID business processes needed to analyze and resolve problems the suppliers face when they deal with multiple customers, each with a different mandate, and with their own set of suppliers. Going beyond the technology and how it has changed supply chain processes, the book includes selection guidelines and implementation examples, such as speed of tag reads versus quality of computer inputs and optimal tag location. The author discusses the implementation of a business process model and the separate but equal concerns that business and IT executives have about the implementation of RFID applications. The book also covers security, integrated control management linked to the corporate strategy, and laws and regulations.

This thoroughly revised

textbook provides a practically applicable guide to three-dimensional echocardiography (3DE). Background is provided on the evolution of the technology and physics that support the implementation of both transthoracic and transesophageal approaches to 3DE. The incremental value of 3DE to assess cardiac chambers is also described. Moreover, a range of cardiac valvular diseases including the mitral, aortic, and tricuspid valve have been portrayed and illustrated in depth. These include congenital abnormalities, regurgitation and stenosis. Emphasis is also placed on technical aspects of the technique and where it can provide added value, including post-surgery assessments and evaluation of cardiac masses. Textbook of Three-Dimensional Echocardiography enables readers to develop a deep understanding of how to use this imaging modality. It provides a valuable resource for the echocardiography trainee looking to develop their knowledge and for the experienced practitioner seeking a comprehensive up-to-date reference.

Basic Linear Design Registries for Evaluating Patient Outcomes Heart failure affects over 5 million patients in the United States alone, and is a chronic and debilitating disease. While a number of pharmacologic therapies have shown varying degrees of effectiveness, many recent advances in the treatment of heart failure has focused on device based therapies. In *Device Therapy in Heart Failure*, William H. Maisel and a panel of authorities on the use and implementation of device based therapies provide a comprehensive overview of the current and developing technologies that are used to treat heart failure. Individual chapters provide an in-depth analysis of devices such as CRT's and ICD's, while broader topics such as the pathophysiology of heart failure and its current medical therapies are also

discussed. Additional topics include Pacing and Defibrillation for Atrial Arrhythmias, Atrial Fibrillation Ablation, and Percutaneous Treatment of Coronary Artery Disease.

Netter's Cardiology E-Book Springer Nature Presenting the latest diagnostic and therapeutic developments in a multifaceted field, this book addresses the problems involved in preventing sudden cardiac death (SCD), focusing on risk stratification techniques designed to direct the selection and application of appropriate treatment modalities. Material reflects recent discoveries concerning the epidemiology and SCD pathophysiology, offering guidelines for more rational treatment approaches, both pharmacologic and interventional. The text reviews the vast epidemiologic data from the Framingham Study, with special emphasis on identifying clinical risk factors and the relation of coronary heart disease to SCD. It also details the background for risk stratification based on well-established exercise testing and ambulatory electrocardiography techniques, as well as newer methods of electrophysiologic testing and signal average electrocardiography. Current prevention strategies--lifestyle alteration, prospective drug trials, surgical and implantable devices--are also discussed.

In November 1986, I was invited to attend a symposium held in Barcelona on Diseases of the Pericardium. The course was directed by Dr. J. Soler-Soler, director of Cardiology at Hospital General Vall d'Hebron in Barcelona. During my brief but delightful visit to this institution, my appreciation

of the depth and breadth of study into pericardial diseases, carried out by Dr. Soler and his group, grew into the conviction that these clinical investigators have accumulated a wealth of information concerning pericardial diseases, and that investigators and clinicians practicing in English speaking countries would greatly profit from ready access to the results of the clinical investigations into pericardial disease carried out in Barcelona. The proceedings of the Barcelona conference were published in a beautifully executed volume in the Spanish language edited by Dr. Soler and produced by Ediciones Doyma. Because I believe that this work should be brought to the attention of the English speaking scientific and clinical communities, I encouraged Dr. Soler to have the book translated into English. I knew that this task could be accomplished and that the book would be translated into good English without change of its content. My confidence was based upon a translation of my own book, *The Pericardium*, into Spanish undertaken by Dr. Permanyer, who is a contributor and co-editor of the present volume.

Textbook of Three-Dimensional Echocardiography Springer The ESC Textbook of Intensive and Acute Cardiovascular Care is the official textbook of the Acute Cardiovascular Care Association (ACVC) of the ESC. Cardiovascular diseases (CVDs) are a major cause of premature death worldwide and a cause of loss of disability-adjusted life years. For most types of CVD early diagnosis and intervention are independent drivers of patient outcome. Clinicians must be properly trained and centres appropriately equipped in order to deal with these critically ill cardiac patients. This new updated edition of the textbook continues to comprehensively approach all the different issues relating to

intensive and acute cardiovascular care and addresses all those involved in intensive and acute cardiac care, not only cardiologists but also critical care specialists, emergency physicians and healthcare professionals. The chapters cover the various acute cardiovascular diseases that need high quality intensive treatment as well as organisational issues, cooperation among professionals, and interaction with other specialities in medicine. SECTION 1 focusses on the definition, structure, organisation and function of ICCU's, ethical issues and quality of care. SECTION 2 addresses the pre-hospital and immediate in-hospital (ED) emergency cardiac care. SECTIONS 3-5 discuss patient monitoring, diagnosis and specific procedures. Acute coronary syndromes (ACS), acute decompensated heart failure (ADHF), and serious arrhythmias form SECTIONS 6-8. The main other cardiovascular acute conditions are grouped in SECTION 9. Finally SECTION 10 is dedicated to the many concomitant acute non-cardiovascular conditions that contribute to the patients' case mix in ICCU. This edition includes new chapters such as low cardiac output states and cardiogenic shock, and pacemaker and ICDs: troubleshooting and chapters have been extensively revised. Purchasers of the print edition will also receive an access code to access the online version of the textbook which includes additional figures, tables, and videos to better to better illustrate diagnostic and therapeutic techniques and procedures in IACC. The third edition of the ESC Textbook of Intensive and Acute Cardiovascular Care will establish a common basis of knowledge and a uniform and improved quality of care across the field.

Handbook of Cardiac Anatomy, Physiology, and Devices CRC Press

This book highlights the latest research in the fields of health care and agriculture, presented at the second installment of the International Conference on Advanced Intelligent Systems for Sustainable Development (AI2SD-2019), held on July 08-11, 2019 in Marrakech, Morocco. Gathering contributions by respected researchers in the field of

agriculture, the book is intended to stimulate debate in this field, and proposes new solutions, tools and effective techniques concerning various current topics in the field of agriculture, such as ICT, IoT and big data analytics for agriculture, smart systems for plant productivity, and data analytics of socio-economic dimensions for sustainable agriculture and aquaculture. With regard to the field of health, the book addresses several areas of research, including E-health services in smart environments (smart homes, smart medical institutions, smart cities), E-health and big data analysis, IoT for health, network interoperability in E-health ecosystems, current and emerging web norms and communication technologies for E-health, heterogeneity of E-health environments and platforms (sensors and actuators, heterogeneous access technologies, security), human-computer interaction, RFID and localization techniques, E-health virtual communities, and business intelligence in health care. This book is intended for academic and professional researchers, decision-makers and all stakeholders in the fields of health and agriculture whose work involves the development and improvement of this field with modern I4.0 technologies and approaches. The authors of each chapter report on the state of the art and present the outcomes of their own research, laboratory experiments, and successful applications. The purpose of the book is to combine the idea of advanced intelligent systems with appropriate tools and techniques for modeling, management, and decision support in the fields of health and agriculture.

Envisioning a Transformed Clinical Trials Enterprise in the United States Lippincott Williams & Wilkins

Provides current insights into critical abnormalities of the heart and lungs. The 3rd Edition includes chapters on microcirculation, regional

distribution of blood flow, methods of increasing oxygen delivery, septic shock, environmental lung injury, and the effects of high pressure environments. Much more focused toward the critical care aspects of cardiopulmonary disorders. Emphasizes the growing knowledge of the chemical basis for tissue injury and the role that inflammatory mediators play in cardiocirculatory failure in chapters on asthma, sepsis, respiratory distress, and septic shock. Provides brand-new chapters on the effects of injury in unusual situations such as diving and high altitude. Discusses modern concepts in the treatment of myocardial infarction, arrhythmias, adult respiratory distress syndrome, sepsis, pneumonia, and much more. Reviews the effects of various ventilatory modes on pulmonary and circulatory function. FEATURES: Divides content into three sections: the pathophysiologic basis of cardiorespiratory failure, general principles of treating patients with cardiac, circulatory, and respiratory failure, and the clinical care of specific cardiac, circulatory, and respiratory diseases encountered in critical care. Discusses current topics of importance, including the role of cytokines in acute pulmonary injury, the biochemical basis of myocardial function, the control of cardiac output in normal and abnormal situations, oxygen transport and utilization, pulmonary mechanics in critical care, intensive care radiology, invasive and noninvasive treatment of acute and chronic respiratory failure, and more. *Atherothrombosis and Coronary Artery Disease* Springer
Written by the world's foremost authorities, this volume provides comprehensive coverage of current approaches to the prevention, diagnosis, and management of atherothrombosis and its coronary and noncoronary complications. This edition has been thoroughly updated, sharply focused on clinical information, and trimmed to one manageable volume. Coverage begins with a review of risk

factors and prevention, emphasizing lipid abnormalities, hypertension, smoking, diabetes, and obesity. Subsequent sections examine the pathogenesis of atherosclerosis, markers and imaging, acute coronary syndromes, chronic stable angina, and noncoronary atherothrombosis. Clinical presentations, medical management, and the latest interventional strategies are included.

Pericardial Disease Saunders Perfect for residents, generalists, anesthesiologists, emergency department physicians, medical students, nurses, and other healthcare professionals who need a practical, working knowledge of cardiology, *Netter's Cardiology, 3rd Edition*, provides a concise overview of cardiovascular disease highlighted by unique, memorable Netter illustrations. This superb visual resource showcases the well-known work of Frank H. Netter, MD, and his successor, Carlos Machado, MD, a cardiologist who has created clear, full-color illustrations in the Netter tradition. New features and all-new chapters keep you up to date with the latest information in the field. Includes 13 all-new chapters: Basic Anatomy and Embryology of the Heart, Stem Cell Therapies for Cardiovascular Disease, Diabetes and Cardiovascular Events, Clinical Presentation of Adults with Congenital Heart Disease, Transcatheter Aortic Valve Replacement, Deep Vein Thrombosis and Pulmonary Embolism, and more. Features new coverage of 3-D TEE imaging for structural heart procedures. Contains color-coded diagnostic and therapeutic algorithms and clinical pathways. Uses an easy-to-follow, templated format, covering etiology, pathogenesis, clinical presentation, diagnostic approach, and management/therapy for each topic. Offers dependable

clinical advice from Drs. George A. Stouffer, Marshall S. Runge, Cam Patterson, and Joseph S. Rossi, as well as many world-renowned chapter contributors.

Sirolimus-Eluting Stents CTA More than 200 noted authorities discuss their views on diagnosis, treatment, and procedures, with advice on everything from assessment and imaging through incisions, anesthesia, and perioperative care issues--including cardiac pacing in adults and children, and the cardiac surgery "fast track." It is packed with "high-yield" information that helps the user to access needed knowledge in the least amount of time.

Life Springer

This book weaves all of these factors together to engage in and promote medical, biomedical and psychosocial interventions, including lifestyle changes, for healthier aging outcomes. The text begins with an introduction to age-related changes that increase in disease and disability commonly associated with old age. Written by experts in healthy aging, the text approaches the principles of disease and disability prevention via specific health issues. Each chapter highlights the challenge of not just increasing life expectancy but also decreasing disease burden and disability in old age. The text then shifts into the whole-person implications for clinicians working with older patients, including the social and cultural considerations that are necessary for improved outcomes as Baby Boomers age and healthcare systems worldwide adjust. *Healthy Aging* is an important resource for those working with older patients, including geriatricians, family medicine physicians, nurses, gerontologists, students, public health administrators, and all other medical professionals.

This book contains the latest researches on advanced intelligent systems applied in the field of education presented during the second edition of the International Conference on Advanced Intelligent Systems for Sustainable Development (AI2SD'2019) held on July 08-11, 2019, in Marrakech, Morocco. The book proposes new approaches and innovative strategies for the manipulation of data and big data collected from the educational environment, exploiting the analysis tools, algorithms of artificial intelligence, and machine learning techniques, in order to extract results, which allow improving the performance and effectiveness of the education field, which is a strategic lever for sustainable development. The book deals with concepts, strategies, and approaches developed on various current axes of scientific research in the field of education, such as smart e-learning, smart education (smart classroom, smart assessment and smart teaching and learning technologies), massive open online courses (MOOC), courseware design, and development for smart learning, cloud learning, and mobile learning. The book is intended for all actors in the educational sector, namely students, professors, academic researchers, and stakeholders. It constitutes a large-scale forum for the exchange of ideas, approaches, and innovative techniques between these actors on the development and innovation of the field of education with the revolution 4.0. The authors of each chapter report the state of the art of the various topics addressed and present results of their own research, laboratory experiments, and successful applications. The purpose of this session is to share the idea of advanced intelligent systems with appropriate tools and techniques for modeling, management, and decision support in the field of education.

The Home Networking Conference 2007 provided an international technical forum for experts from industry and academia everywhere in the world to exchange ideas and present results of ongoing researches in home networking. The IFIP series publishes state-of-the-

art results in the sciences and technologies of information and communication. Proceedings and post-proceedings of referred international conferences in computer science and interdisciplinary fields are featured.

Artificial Hearts Springer Science & Business Media
This text describes and illustrates with some 700 detailed anatomic and surgical drawings the whole spectrum of surgical procedures employed to treat acquired and congenital diseases of the heart and great vessels in adults and children. A rather traditional chapter on history of cardiac surgery precedes chapters dedicated to quality improvement, followed by ICU management in adult and pediatric cardiac surgery, and techniques of extracorporeal circulation in both age groups. Further special topics are cardiovascular tissue engineering, minimally invasive cardiac surgery, endovascular treatment of aortic diseases, and cardiac assist devices, including total artificial heart. Written by 71 internationally recognized experts from 40 cardiac units in Central Europe and North America, this book will be invaluable not only for both novice and experienced surgeons, but also for all physicians, nurses, and technicians caring for patients with heart disease of any type, at any age.

Quickly and accurately diagnose and treat the critically ill patient with guidance from the field's definitive text
"...Clearly the finest textbook available in the field." -- Critical Care Medicine journal
"...Very well done...unusually user-friendly...excellent...a significant contribution to the field. It should be placed not only in the critical care practitioner's library, but also in the rounds and nurses'

conference rooms of critical care units." -- Journal of the American Medical Association Considered the field's definitive text, Principles of Critical Care offers unmatched coverage of the diagnosis and treatment of the most common problems encountered in the practice of critical care. Written by expert critical care physicians who are also experienced teachers, the book features an organization, thoroughness, and clarity not found in any other reference on the topic. Within its pages, you will find comprehensive, authoritative discussion of every aspect of critical care medicine essential to successful clinical practice, ranging from basic principles to the latest technologies. The fourth edition is highlighted by: A new full-color presentation NEW CHAPTERS on ICU Ultrasound, Extracorporeal Membrane Oxygenation, ICU-Acquired Weakness, Abdominal Compartment Syndrome, and Judging the Adequacy of Intravascular Volume The addition of many new figures and diagnostic and treatment algorithms In-depth, up-to-date descriptions of the unique presentation, differential diagnosis, and management of specific critical illnesses A logical organ system approach that simplifies the search for thorough and practical information necessary to manage a patient's specific condition The integration of pathophysiology throughout the text Content that reflects today's interdisciplinary approach to critical care medicine *Reviews are of previous editions
