Understanding and Applying Mathematical
Concepts The goal of the Bittinger Concepts
and Applications Series is to help today's
student learn and retain mathematical
concepts. This proven program prepares
students for the transition from skills-oriented
elementary algebra courses to more concept-
oriented college-level mathematics courses.
This requires the development of critical-
thinking skills: to reason mathematically, to
communicate mathematically, and to identify
and solve mathematical problems. The new
editions support students with a tightly
integrated MyMathLab course; a strong focus
on problem-solving, applications, and concepts,
and the robust MyMathGuide workbook and

objective-based video program. In addition, new with MyLab & Mastering, ask your instructor for material--developed as a result of the authors' experience in the classroom, as well as from insights from faculty and students--includes more systematic review and preparation for practice, as well as stronger focus on real-world applications. Also available with MyMathLab (tm) . MyMathLab is an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured environment, students practice what they learn, test their understanding, and pursue a personalized study plan that helps them absorb course material and understand difficult concepts. The Bittinger Graphs and Models Series helps readers learn algebra by making connections between mathematical concepts and their real-world applications. Abundant applications, many of which use real data, offer students a context for learning the math. The authors use a variety of tools and techniques—including graphing calculators, multiple approaches to problem solving,

and interactive features—to engage and motivate all types of learners.

Intermediate Algebra Pearson
BEGINNING ALGEBRA: CONNECTING CONCEPTS THROUGH APPLICATIONS shows students how to apply traditional mathematical skills in real-world contexts. The emphasis on skill building and applications engages students as they master algebraic concepts, problem solving, and communication skills. Students learn how to solve problems generated from realistic applications, instead of learning techniques without conceptual understanding. The authors have developed several key ideas to make concepts real and vivid for students. First, they emphasize strong algebra skills. These skills support the applications and enhance student comprehension. Second, the authors integrate applications, drawing on realistic data to show students why they need to know and how to apply math. The applications help students develop the skills needed to explain the meaning of

answers in the context of the application. Third, the authors develop key concepts as students progress through the course. For example, the distributive property is introduced in real numbers, covered when students are learning how to multiply a polynomial by a constant, and finally when students learn how to multiply a polynomial by a monomial. These concepts are reinforced through applications in the text. Last, the authors' approach prepares students for intermediate algebra by including an introduction to material such as functions and interval notation as well as the last chapter that covers linear and quadratic modeling. This book covers both elementary and intermediate algebra in one volume, with an early introduction to graphing and functions, and with all the proven pedagogy and problem sets of the successful BE series. With this revision, the authors have retained all the hallmark features that have made this series so successful, including its five-step problem solving process, student-oriented writing style, real data applications, and variety of exercises. Among the new features added or revised are the Technology Connection boxes, Collaborative Corner exercises, and World Wide Web integration.
