Studyguide for Intermediate Microeconomics with Calculus: a Modern Approach by Varian, Hal R. Harvard Business Press

From the 1960s onward, neoclassical economists have increasingly managed to block the employment of non-neoclassical economists, narrow the economics curriculum offered by universities to students, and made their theory increasingly irrelevant to understanding economic reality. Now, they are even banishing economic history and the history of economic thought from the curriculum. Why has this tragedy happened? At this time of accelerating momentum for radical change in the study of economics, "A Guide to What's Wrong with Economics"

comprehensively examines the shortcomings of neoclassical economics and considers a number of alternative formulations. In it, a distinguished list of non-neoclassical economists provide an examination of some of the many worldly and logical gaps in neoclassical economics, its hidden ideological agendas, disregard for the environment, habitual misuse of mathematics and statistics, inability to address the major issues of economic globalization, its ethical cynicism concerning poverty, racism and sexism, and its misrepresentation of economic history. In clear and engaging prose, "A Guide to What's Wrong with Economics" shows how interesting, relevant and exciting economics can be when it is pursued, not as the defense of an antiquated and close-minded system of belief, but as a no-holds barred inquiry looking for real-world truths. This book is a must-read for all economists and their graduate students, as well as for the general reader.

Leading edge topics in coding and wireless communication make this an ideal text for students taking just one course on the subject. Fundamentals of Digital Communications has coverage of turbo and LDPC codes in sufficient detail and clarity to enable hands-on implementation and performance evaluation, as well as 'just enough' information theory to enable computation of performance benchmarks to compare them against. Other unique features include space-time communication and geometric insights into noncoherent communication and equalization. The Economics of Information Technology Cengage Learning
