The End of the Line FrancoAngeli

Ninety percent of the large fish in the world's oceans have disappeared in the past half century, causing the collapse of fisheries along with numerous fish species. In this hard-hitting, provocative exposé, Charles Clover reveals the dark underbelly and hidden costs of putting food on the table at home and in restaurants. From the Tsukiji fish market in Tokyo to a seafood restaurant on the North Sea and a trawler off the coast of Spain, Clover pursues the sobering truth about the plight of fish. Along with the ecological impact wrought by industrial fishing, he reports on the implications for our diet, particularly our need for omega-3 fatty acids. This intelligent, readable, and balanced account serves as a timely warning to the general public as well as to scientists, regulators, legislators--and all fishing enthusiasts.

This book illustrates the various facets of internationalization in managerial practice, starting with a strategic outline of the many options firms have when formulating internationalization strategies. Designed as a textbook for Bachelor, Master and MBA classrooms, the core of the book consists of six case studies on firms from diverse industries, such as sporting goods, aviation, grocery discount, motorcycle, computer and IT, and fast-food. The cases present a variety of ways of entering and operating in foreign markets, such as export, franchising, joint ventures, strategic alliances, greenfield-investments, acquisitions and mergers. In addition to market entry strategies, the cases provide readers, educators and students with insights into target market strategies, timing strategies, allocation strategies and

coordination strategies of well-known companies.

Principles of International Finance and Open Economy Macroeconomics
Routledge

Principles of International Finance and Open Economy Macroeconomics: Theories, Applications, and Policies presents a macroeconomic framework for understanding and analyzing the global economy from the perspectives of emerging economies and developing countries. Unlike most macroeconomic textbooks, which typically emphasize issues about developed countries while downplaying issues related to developing countries, this book emphasizes problems in emerging economies, including those in Latin American countries. It also explains recent developments in international finance that are essential to a thorough understanding of the effects and implications of the recent financial crisis. - Concentrates on developing country perspectives on International Finance and the Economy, including those in Latin

American countries - Provides case studies and publicly available data allowing readers to explore theories and their applications - Explains recent developments in international finance that are essential to a thorough understanding of the effects and implications of the recent financial crisis - Proposes a unified mathematical model accessible to those with basic mathematical skills

U.S. Tax Cases John Wiley & Sons
The economic and political rise of the BRICS countries (Brazil, Russia, India, China and South Africa), and powerful middle-income countries (MICs) such as Argentina, Indonesia and Turkey, has far-reaching implications for global agrarian transformation. These countries are key sites of agricultural commodity production, distribution, circulation and consumption and are contributing to major shifts in the character of agro-food systems. This comprehensive collection explores these issues through the lens of critical agrarian studies, which examine fundamental social change in, and in relation to, rural worlds. The authors explore key themes such as the processes of agrarian change associated with individual countries within the grouping, the role and impact of BRICS countries within their respective regions, the role of other MICs within these regions and the rising importance of MICs within global and regional agro-food systems. The book encompasses a wide variety of case studies, including the expansion of South African agrarian capital within Africa; Brazil as a regional agro-food power and its complex relationship with China, which has

been investing heavily in Brazil; the role of BRICS and MICs in Bolivia's soy complex; crop booms within China; China's role in land deals in Southeast Asia; and Vietnamese investment in Cambodia. This book will be of interest to students and researchers of critical agrarian studies, with a focus on BRICS and MICs. It was originally published as a special issue of the journal *Globalizations*.

A fascinating study of the root motivations behind the political activities and philosophies of Putin's government in Russia "Part intellectual history, part portrait gallery . . . Black Wind, White Snow traces the background to Putin's ideas with verve and clarity."—Geoffrey Hosking, *Financial Times* "Required reading. This is a vivid, panoramic history of bad ideas, chasing the metastasis of the doctrine known as Eurasianism. . . . Reading Charles Clover will help you understand the world of lies and delusions that is Eurasia."—Ben Judah, *Standpoint* Charles Clover, award-winning journalist and former Moscow bureau chief for the *Financial Times*, here analyzes the idea of "Eurasianism," a theory of Russian national identity based on ethnicity and geography. Clover traces Eurasianism's origins in the writings of white Russian exiles in 1920s Europe, through Siberia's Gulag archipelago in the 1950s, the dissolution of the Soviet Union in the early 1990s, and up to its steady infiltration of the governing elite around Vladimir Putin. This eye-opening analysis pieces together the evidence for Eurasianism's place at the heart of Kremlin thinking today and explores its impact on recent events, the annexation of Crimea, and the rise in Russia of anti-Western paranoia and imperialist rhetoric, as well as Putin's sometimes perplexing political actions and ambitions. Based on extensive research and dozens of interviews with Putin's close advisers, this quietly

explosive story will be essential reading for anyone concerned with Russia's past century, and its future.

Activists have exposed startling forms of labor exploitation and environmental degradation in global industries, leading many large retailers and brands to adopt standards for fairness and sustainability. This book is about the idea that transnational corporations can push these standards through their global supply chains, and in effect, pull factories, forests, and farms out of their local contexts and up to global best practices. For many scholars and practitioners, this kind of private regulation and global standard-setting can provide an alternative to regulation by territorially-bound, gridlocked, or incapacitated nation states, potentially improving environments and working conditions around the world and protecting the rights of exploited workers, impoverished farmers, and marginalized communities. But can private, voluntary standards actually create meaningful forms of regulation? Are forests and factories around the world actually being made into sustainable ecosystems and decent workplaces? Can global norms remake local orders? This book provides striking new answers by comparing the private regulation of land and labor in democratic and authoritarian settings. Case studies of sustainable forestry and fair labour standards in Indonesia and China show not only how transnational standards are implemented 'on the ground' but also how they are constrained and reconfigured by domestic governance. Combining rich multi-method

analyses, a powerful comparative approach, and a new theory of private regulation, *Rules without Rights* reveals the contours and contradictions of transnational governance. *Transformations in Governance* is a major new academic book series from Oxford University Press. It is designed to accommodate the impressive growth of research in comparative politics, international relations, public policy, federalism, environmental and urban studies concerned with the dispersion of authority from central states up to supranational institutions, down to subnational governments, and side-ways to public-private networks. It brings together work that significantly advances our understanding of the organization, causes, and consequences of multilevel and complex governance. The series is selective, containing annually a small number of books of exceptionally high quality by leading and emerging scholars. The series targets mainly single-authored or co-authored work, but it is pluralistic in terms of disciplinary specialization, research design, method, and geographical scope. Case studies as well as comparative studies, historical as well as contemporary studies, and studies with a national, regional, or international focus are all central to its aims. Authors use qualitative, quantitative, formal modeling, or mixed methods. A trade mark of the books is that they combine scholarly rigour with readable prose and an attractive production style. The series is edited by Liesbet Hooghe and Gary Marks of the University of North Carolina, Chapel Hill, and Walter Mattli of the

University of Oxford.
Internationalization of Business Taylor & Francis
Before the recent Ukrainian crisis, Russia was one of the main sources of foreign direct investment (FDI) outflow and one of the main targets of FDI inflow in the world. However, the events in the Ukraine, the formation of the Eurasian Economic Union, and China's growing interest in the Russian market and its natural resources have changed the picture completely. This new book brings together an international group of contributors to present a timely and comprehensive analysis of FDI to and from Russia. The book assesses the impact of the changed international political situation on foreign firms operating in Russia, and explores how the new world context has affected Russian investments abroad. The book also considers the future relationship between Russian corporations and the EU and the USA in light of recent events. This book answers an array of key questions including: how have investments from and to Russia developed in the last 100 years; how are Russian businesses spreading to foreign countries through their indirect investments; and how is the Russian Government influencing the investments of Russian businesses abroad? This volume is of great interest to those who study international economics, modern world economy, and FDI, as well as those interested in international investment movements and the changing role of Russia in international business and the global economy.

The year 2007 could perhaps accurately be described as the year when climate change finally received the attention that this challenge deserves globally. Much of the information and knowledge that was created in this field during the year was the result of the findings of the Fourth Assessment Report (AR4) of the Intergovernmental Panel on Climate Change (IPCC), which were disseminated on a large scale and reported extensively by the media.

This was the result not only of a heightened interest on the part of the public on various aspects of climate change, but also because the IPCC itself proactively attempted to spread the findings of its AR4 to the public at large. The interest generated on the scientific realities of climate change was further enhanced by the award of the Nobel Peace Prize to the IPCC and former Vice President of the US, Al Gore. By taking this decision in favour of a leader who has done a great deal to create awareness on climate change, and a body that assesses all scientific aspects of climate change and disseminates the result of its findings, the Norwegian Nobel Committee has clearly drawn the link between climate change and peace in the world.

This fascinating book presents the experiences and pooled knowledge of two very different conservation scientists; Pei Shengji from Sichuan, China and Alan Hamilton from London, UK. They have been drawn together over many years through working on some of the same conservation projects and have discovered that they overlap in their ideas about the sorts of work that needs to be done and how it can best be carried out. The book describes some of their own experiences, set within the contexts of their varied careers and the development of their thinking. International Business Routledge In *International Multi-Unit Leadership*, Chris Edger builds on his earlier *Effective Multi-Unit Leadership*. First - showcasing up-to-date, contemporaneous case studies of market-leading international organisations - the book takes a cross-border perspective on leading from the middle in international subsidiaries that are committing significant capital to land-based multi-unit infrastructures. Secondly, it captures the zeitgeist of internationalizing hospitality, retail, service and leisure organizations facing challenges in relation to multi-channel/smart technology spread, divergent national cultures and emergent, imitative local competition. Thirdly, it addresses the conundrum that most subsidiary multi-unit leaders (regional, area and district managers) face, generating commitment amongst their unit managers and team members, whilst coping with their

firm's country of origin-based control and change agendas. Continuing the themes that emerged in his earlier book, particularly around how multi-unit leaders (MULs) and directors are expected to expedite a number of competing and contradictory functions, the author finds that in subsidiary-based international situations, complexity and ambiguity escalates due to 'distance decay' and the level of internal and external contextual turbulence. Based on exemplary case studies, the author examines how high-performance MULs manage paradox and ambiguity within an international context and how organizations can deliver local effectiveness within a strategic framework determined by a policy-making centre hundreds or thousands of miles away. The research and case studies in this book will appeal to managers within international multi-unit enterprises, service directors wishing to train and coach others, students on any of the increasing number of multi-unit management programmes being run in business schools, and academics with an interest in internationalizing service-based enterprises. *Chambers & Partners' the Legal Profession* World Scientific Publishing Company An incisive and comprehensive exploration of international business in the modern world In the newly updated third edition of *International Business*, an accomplished team of educators and business practitioners delivers a revitalized approach to the discipline that brings international business to life. This collection explores the complex dynamics of corporate land deals from a broad agrarian political economy perspective, with a special focus on the implications for property and labour regimes, labour processes and structures of accumulation. This involves looking at ways in which existing patterns of rural social differentiation - in terms of class, gender, ethnicity and generation - are being shaped by changes in land use and property relations, as well as by the re-organization of production and exchange as rural communities and resources are incorporated into global commodity chains. It goes further than the descriptive 'what' and 'who' questions, in order to understand the 'how' and 'why' of these patterns. It is empirically solid and theoretically sophisticated, making it a robust and boundary-changing work. Contributors come from various scholarly disciplines. Covering nearly all regions of the world, the collection will be of interest to researchers from various disciplines, policymakers and activists. This book was originally published as a Special Issue of the Journal of Peasant Studies.

Black and Scholes (1973) and Merton (1974) (hereafter referred to as BSM) introduced the contingent claim approach (CCA) to the valuation of corporate debt and equity. The BSM modeling framework is also named the 'structural' approach to risky debt valuation. The CCA approach considers all stakeholders of the corporation as holding contingent claims on the assets of the corporation. Each claim holder has different priorities, maturities and conditions for payouts. It is

based on the principle that all the assets belong to all the liability holders. In the structural approach the arrival of the default event relies on economic arguments for why firms default as it is explicitly related to the dynamics of the economic value of the firm. A standard structural model of default timing assumes that a corporation defaults when its assets drop to a sufficiently low level relative to its liabilities. The BSM modeling framework gives the basic fundamental version of the structural model where default is assumed to occur when the net asset value of the firm at the maturity of the pure-discount debt becomes negative, i.e., market value of the assets of the firm falls below the market value of the firm's liabilities. In a regime of limited liability, the shareholders of the firm have the option to default on the firm's debt. Equity can be viewed as a European call option on the firm's assets with a strike price equal to the face value of the firm's debt. Actually, CCA can be used to value all the components of the firm's liabilities. Option pricing models are used to value stocks, bonds, and many other types of corporate claims. Different versions of the model correspond to different assumptions about the conditions when a firm defaults. Merton (1974) assumes that the firm only defaults at the maturity date of the firm's outstanding debt when the net asset value of the firm, in market value terms, is negative. Others introduce other conditions for default. Also, different authors introduce more complicated capital structure with different kinds of bonds (e.g. senior and junior), warrants, corporate taxes, ESOP, and more. Volume 1: Foundations of CCA and Equity Valuation Volume 1 presents the seminal papers of Black and Scholes (1973) and Merton (1973, 1974). This volume also includes papers that specifically price equity as a call option on the

corporation. It introduces warrants, convertible bonds and taxation as contingent claims on the corporation. It highlights the strong relationship between the CCA and the Modigliani-Miller (M&M) Theorems, and the relation to the Capital Assets Pricing Model (CAPM). Volume 2: CCA Approach to Corporate Debt Valuation Volume 2 concentrates on corporate bond valuation by introducing various types of bonds with different covenants as well as introducing various conditions that trigger default. While empirical evidence indicates that the simple Merton's model underestimates the credit spreads, additional risk factors like jumps can be used to resolve it. Volume 3: Issues in Corporate Finance with CCA Approach Volume 3 includes papers that look at issues in corporate finance that can be explained with the CCA approach. These issues include the effect of dividend policy on the valuation of debt and equity, the pricing of employee stock options and many other issues of corporate governance. Volume 4: CCA Approach to Banking and Financial Intermediation Volume 4 focuses on the application of the contingent claim approach to banks and other financial intermediaries. Regulation of the banking industry led to the creation of new financial securities (e.g., CoCos) and new types of stakeholders (e.g., deposit insurers).
