Today, war is more complicated than it has ever been. When considering military strategy, a commander must be aware of several theaters of war. There's ground strength, air power, naval combat and even cyber warfare. In the late 19th century, however, the true military might of a nation rested primarily on the strength of its navy. In 1890, United States Navy Captain Alfred Thayer Mahan published a book titled "The Influence of Sea Power Upon History." The monumental text addressed the importance of both military and commercial fleets in the success of a nation in war and peacetime. Mahan begins with a discussion of the elements he considers to be the key to a nation's success on the seas. He theorizes that a ground force could not sustain the pressure of a naval blockade. Mahan then applies his principles to wars of the past. He analyzes the use of a navy in various engagements and considers the resulting influence on the outcome of the wars. The book was readily accepted by commanders and tacticians all over the world and his principles and theories were utilized throughout the 20th century. His arguments, along with technological advances, were influential in the strengthening of the United States Navy. Presently, Mahan's work is considered the most important work on naval strategy in history.

The Economic Development of the Indonesian Service Sector, Ca. 1900-2000 International Trade Theory and Policy

This volume documents the links among trade, colonialism, and forms of representation. Examining trade in commodities as diverse as illicit drugs, liquor, bananas, disease, tourism, adventure fiction, and modern aboriginal art, as well as cultural exchanges in politics, medicine, and literature, the contributors contest the view of trade as an equaliser of cultures, places, and peoples promoted by some modern economists, demonstrating instead the ways in which commerce has created and exacerbated differences of power.

A highly original theory of how the mind-brain works, based on the author's study of single neuronal cells. In *I of the Vortex*, Rodolfo Llinas, a founding father of modern brain science, presents an original view of the evolution and nature of mind. According to Llinas, the "mindness state" evolved to allow predictive interactions between mobile creatures and their environment. He illustrates the early evolution of mind through a primitive animal called the "sea squirt." The mobile larval form has a brainlike ganglion that receives sensory information about the surrounding environment. As an adult, the sea squirt attaches itself to a stationary object and then digests most of its own brain. This suggests that the nervous system evolved to allow active movement in animals. To move through the environment safely, a creature must anticipate the outcome of each movement on the basis of incoming sensory data. Thus the capacity to predict is most likely the ultimate brain function. One could even say that Self is the centralization of prediction. At the heart of Llinas's theory is the concept of oscillation. Many neurons possess electrical activity, manifested as oscillating variations in the minute voltages across the cell membrane. On the crests of these

oscillations occur larger electrical events that are the basis for neuron-to-neuron communication. Like cicadas chirping in unison, a group of neurons oscillating in phase can resonate with a distant group of neurons. This simultaneity of neuronal activity is the neurobiological root of cognition. Although the internal state that we call the mind is guided by the senses, it is also generated by the oscillations within the brain. Thus, in a certain sense, one could say that reality is not all "out there," but is a kind of virtual reality.

Market Liberalizations and Emigration From Latin America provides a comprehensive analysis of the impact of the era of liberalization in Latin America, focusing in particular on labor markets and emigration from the region. Starting in 1980, liberalization in Latin America was expected to improve market functioning, efficiency, and welfare. Instead, it yielded slower growth, unexpectedly high levels of unemployment and income inequality, flat or falling wages, an increase in non-tradeable (service sector) and informal activity, and, finally, waves of emigration from Mexico, Central America, and Ecuador, among other countries. This book provides a heterodox narrative explanation of why the orthodox economic model that underwrote the standard 'trickle-down' account served more to obscure and obfuscate than to explain and clarify the state-of-affairs. The book investigates the impact of the global-scale liberalizations of markets for goods and physical and finance capital and the mere national-scale liberalization of regional labor markets, arguing that these asymmetric liberalizations, together, resulted in labor market failure and contributed in turn to the subsequent, undocumented migrant flow. The ultimate effect of the skewed scale of market liberalizations in Latin America disproportionately benefited capital at the expense of labor. Market Liberalizations and Emigration From Latin America will be of interest to researchers of economics and development in Latin America.

The most intriguing question about Indonesia's economic development during the twentieth century is why the country's growth performance has been so erratic and displayed such a high degree of discontinuity. This is connected with the fundamental question about the nature of long-run economic development in Indonesia. So far the economic historiography of Indonesia has been less systematic than what the available source material would permit. Indonesia is exceptionally well endowed with rich statistical sources, which carry the potential of supporting a rigorous and systematic quantitative approach to vital questions concerning the economic growth performance in the long run. This book takes such an approach and presents new estimates for the long-run growth of the Indonesian service sector, and analyses the role of the various service sectors in economic development. Linking empirical and theoretical analysis in a creative fashion, Daan Marks provides a rich and original contribution to our understanding of the economic history of Indonesia. He shows that the service sector has played a crucial role in Indonesia's economic development. Or in other words, to fully understand Indonesia's economic development path services need to be accounted for.

How the unaccountable, unmonitorable, and unchecked actions of regulators precipitated the global financial crisis; and how to reform the system. The recent financial crisis was an accident, a "perfect storm" fueled by an unforeseeable confluence of events that unfortunately combined to bring down the global financial systems. Or at least this is the story told and retold by a chorus of luminaries that includes Timothy Geithner, Henry Paulson, Robert Rubin, Ben Bernanke, and Alan Greenspan. In Guardians of Finance, economists James Barth, Gerard Caprio, and Ross Levine argue that the financial meltdown of 2007 to 2009 was no accident; it was negligent homicide. They show that senior regulatory officials around the world knew or should have known that their policies were destabilizing the global financial system and yet chose not to act until the crisis had fully emerged. Barth, Caprio, and Levine propose a reform to counter this systemic failure: the establishment of a "Sentinel" to provide an informed, expert, and independent assessment of financial regulation. Its sole power would be to demand information and to evaluate it from the perspective of the public—rather than that of the financial industry, the regulators, or politicians.
